Notes and caveats	<p>All data is drawn from government survey results and is subject to any associated limitations or distortions present in the source data.</p> <p>The methodology by which literacy was measured during the census is not known.</p> <p>Language and dialect naming conventions in the census are sometimes unclear and in some cases have been grouped or allocated to the Other Languages field.</p> <p>Languages with population shares less than 0.01% or under 1,000 people (whichever is greater) have been aggregated into the "Other" field.</p> <p>All decimal values have been rounded to a maximum of 3 decimal places. As a result language shares may not total 100%.</p> <p>Empty values represent non-existent data and should not be treated as zero values.</p>

Data confidence

<u>descriptions</u>	<u>Examples</u>
High	Data from well regarded government census or other specialist organisation.
Medium	Data from quality source but without clear methodology or inverse.
Low	Data known to be erroneous or based on non-statistical or imprecise data.

Factors
increasing
Factors
decreasing
confidence

Data is corroborated. Data can be directly applied to administrative areas without aggregation or manipulation.

Data is disputed. Data requires transformation that may affect accuracy for example combining admin 2 data to form admin 1 data.
