Notes and caveats	<p>All data is drawn from government survey results and is subject to any associated limitations or distortions present in the source data.</p> <p>The methodology by which literacy was measured during the census is not known.</p> <p>As a data protection measure, the language dataset provider, IPUMS has merged various second administrative units in order to provide spatio-temporally harmonized units that meet their 20,000 population threshold required for public dissemination of the data. This has resulted in combined figures for different zones in the Ethiopia dataset. North Western Tigray and Western Tigray, for example, have been combined into one row in this dataset and the language data can only apply across these combined zones. Attempts to disaggregate these locations would likely result in decreased data accuracy.</p> <p>Language and dialect naming conventions in the census are sometimes unclear and in some cases have been grouped or allocated to the Other Languages field.</p> <p>Languages with population shares less than 0.01% or under 1,000 people (whichever is greater) have been aggregated into the "Other" field.</p> <p>All decimal values have been rounded to a maximum of 3 decimal places. As a result language shares may not total 100%. Empty values represent non-existent data and should not be treated as zero values.</p>

Data confidence

<u>descriptions</u>	<u>Examples</u>
High	Data from well regarded government census or other specialist organisation.
Medium	Data from quality source but without clear methodology or inverse.
Low	Data known to be erroneous or based on non-statistical or imprecise data.
Factors increasing confidence	Data is corroborated. Data can be directly applied to administrative areas without aggregation or manipulation.
Factors decreasing confidence	Data is disputed. Data requires transformation that may affect accuracy for example combining admin 2 data to form admin 1 data.

<u>Language</u>	<u>ISO 639-3 code</u>	<u>Alternative names and spellings</u>
Afar	aar	Affarigna
Awngi	awn	Agew-Awinigigna
Qimant	ahg	Agew-Kamyrynya
