HDX Community:

The report and data attachments were completed in partial fulfillment of Public Health coursework in “Medical Geography,” for spring 2018, at Drew University. The report, “Food Security and Public Health Synthesis: Case Study of Nigeria,” written by Jordan Burnett, Leah Nadel, Victoria Santiago and Arline Tarazona, explores the present acute food security situation in Nigeria, and the geographic changes in IPC over ten years.

Data attachments include FEWS NET shapefiles from 2009-2018, clipped to OCHA boundaries for Nigeria. Please refer to the metadata for more details. For questions about this work, or the Spatial Data Center at Drew University, please refer to the contact information [here](#).

Many thanks,

Lisa
