

SMARTPLAN™ Web-Based Response Planning

CENTRALIZED + INTEGRATED RESPONSE PLANNING APPLICATION THAT STREAMLINES PLAN MAINTENANCE, IMPROVES ACCESSIBILITY, AND ESTABLISHES CONSISTENCY.

Today, many companies find it challenging to manage their emergency response plans, emergency action plans, security plans and business continuity plans. These plans are often inconsistent across facilities, regions and divisions, out of date, and are difficult to access by stakeholders. Updating individual documents requires multiple and potentially repetitive steps, and documenting responses to emergencies or exercises is manual, inefficient and inconsistent.

Introducing SMARTPLAN™

SMARTPLAN is an innovative and proven emergency planning and response application and is available to any industry or operation.

SMARTPLAN utilizes database-technology to streamline many aspects of company-wide response planning by improving stakeholder accessibility and plan maintenance while incorporating industry best practices, company protocols and regulatory requirements.

Consolidated Data At Your Fingertips

Our SMARTPLAN software ensures that your company's response plan data is stored and consolidated in one place. No matter how large your enterprise is, SMARTPLAN enables you to update plans consistently and efficiently across all locations, departments and business units. Our database-driven approach ensures your emergency response plan is scalable, intuitive and easy to maintain. In addition, the most current response plan information is always accessible from your mobile devices via our SMARTPLAN Mobile App.

Customizable Templates

We recognize that our clients have unique operations and company practices and need emergency response plans that address these distinctions. We partner with each client to customize response plan templates that meet your specific needs and regulatory requirements.

Are These Your Challenges?

- Do you need to manage plans with less staff?
- Are your response plans maintained in static paper binders?
- Do you want your team to access your response plans with a mobile app?
- Are you looking for a way to manage duplicate content easily across multiple locations?
- Do you have an efficient way to manage and document responses?

KEY BENEFITS

In the event of an emergency, SMARTPLAN™ offers the security of thorough and up-to-date response plans to protect employees, the environment, property and reputation of your organization.

Easy access to the latest version of your plans in a user-friendly format avoids confusion and improves plan accuracy so your team can focus on response.

SMARTPLAN Benefits Include:

- + Enterprise applicability
- + Secure 24/7 accessibility and role-based permissions
- + Single Sign-On capability
- + User-friendly client editing tools
- + Mobile app for improved accessibility
- + Integrated response management tools
- + Straightforward plan navigation
- + Integrated task management system
- + Automated documentation of plan revisions
- + Full printing capabilities
- + Databased management of all plan content
- + Turnkey plan development services
- + Externally hosted SaaS model with 100% redundancy and SOC 2 certified data security practices
- + Plan administration and content reports
- + Robust contacts management functionality, including acceptance of periodic client Human Resources feeds

SMARTRESPONSE™

The SMARTRESPONSE module provides simplified tools to manage most emergencies and document all exercises through an interactive database-driven interface. This module is designed to provide response management tools for your use without third-party consultants and streamlines documentation and developing Incident Action Plans.

Key Benefits Include:

- + Imports emergency notification requirements and Response Checklists from your response plans
- + Complements response plans with actionable Incident Command System (ICS) forms and response tools
- + Provides guidance for meeting schedules and can be used for multiple operational periods
- + Can be utilized for Crisis and Incident Management
- + Utilizes simplified interface with key ICS Forms
- + Enterprise-wide tracking and documentation of all emergency incidents and exercises
- + Tracks incident and exercise participants
- + Reporting tools for action items and lessons learned
