

GEM-H1326C/100 KIT GEM-H1326C/50 KIT PROXIMITY CARDS

The GEM-H1326C/100 provides 100 HID Proximity cards (the GEM-H1326C/50 provides 50 cards), each with 26 Bit standard HID Format and a Facility Code of 19. These cards are intended to be used with the GEM-ACM1D access control accessory. All cards have numbers printed on their face--some with a unique 14 digit number (5 digits followed by 9 digits), others with only 5 digits. When programming these Proximity cards and assigning them to a particular user number (user number attributes should be discussed with the installation company), one of two methods must be used:

- A. If the GEM-ACM1D programming option "Enable Facility Code" **is not** selected, then the first 5 digits must be preceded by "0".

For example:

If the number printed on the card is "04819 11022542-1", (or "04819") the card access code entered for the selected user number should be "004819".

- B. If the GEM-ACM1D programming option "Enable Facility Code" **is** selected, then the first group of 5 digits must be preceded by "9" (the "9" is the least significant digit of the Facility Code "19").

For example:

If the number printed on the card is "04819 11022542-1" (or "04819") the card access code entered for the selected user number should be "904819".

Refer to GEM-ACM1D documents WI1221 and OI293 for complete instructions.
