

**STORIES OF UNIVERSE  
WITH NEIL & NYSA**

**GRADES 2-3**

**COSMIC  
JUNIOR**

**THE LARGEST ASTRONOMY AND SPACE SCIENCE SUMMER CAMP**

# Meet the Sun's Family

To begin with our learnings of universe, it is essential to understand the system we live in. In this session, come along with us on a journey to explore the sun and the planetary system through an interesting solar system activity.

# Digging all the way to the Center of the Earth

Once my dog started digging the ground in the garden. I guess he was bored! Well, he got tired of digging because it never ended. I laughed at that time but it all left me with a question-What's beneath the ground? I got the answer and I am all ready to explain it to you with a fun activity. Are you?

We see the sky every night. But, how much do we really know about it. Learn the importance of stars and constellations in this session. Find out how to locate objects in the sky by learning to operate the software 'Stellarium'. Also, practice a night sky exploring application on your own.

# The Bear, The Hunter And The Stories Of CONSTELLATIONS

## ABOUT STEM & SPACE

We are a niche educational firm with a focus on the integration of Science, Technology, Engineering & Math (STEM) principles conveyed through the wonders of space science and astronomy. We develop and conduct hands on engaging sessions with children to create awareness and foster curiosity to build scientific temperament and interest in science and technology at very early age.
