

Executive Summary

The National Association of State Procurement Officials (NASPO) ValuePoint Cooperative Purchasing Program has been helping states across the country for decades in establishing public contracts that support multi-state procurement needs. In fact, HHS Technology Group, LLC (HHS Tech Group) are one of six companies that was selected in the NASPO ValuePoint solicitation for Provider Management in May of 2019. Since then, we have been awarded in two states, Wyoming and South Dakota, leveraging the due diligence and contracting framework provided through NASPO. As the lead state in this new procurement, Georgia is taking an active step forward in securing agreements from qualified suppliers to support a wide range of Third Party Liability (TPL) services and technology needs. HHS Tech Group is proposing our TPL System Module, **Recover your Liability (RyL)**, in response to the *Third Party Liability Services Electronic Request for Proposals #41900-DCH0000120*.

HHS Tech Group is specifically focused on assisting states in modernizing and/or replacing legacy Medicaid Management Information Systems (MMIS) technology with modern cloud-based, modular Software as a Service (SaaS) solutions. While our history and experience dates back to 2007, HHS Tech Group was officially formed in June of 2017.

Recover your Liability (RyL) Overview

Recover your Liability (RyL) was built to address the growing budgetary constraints of states as they encountered continued growth in the number of citizens eligible for Medicaid, CHIP, and other public programs. States like Georgia face a constant struggle to reduce Medicaid program costs without eliminating services. As membership in programs grow, states like Georgia have been diligent in enforcing providers and members alike to supply information on third parties that should accept responsibility for payment before Medicaid.

RyL was specifically built for states to have an end-to-end solution to ensure accurate, timely action is taken across all necessary TPL activities – from pre-payment cost avoidance to post-payment recovery. RyL supports the precise identification and recovery of all known and potential third-party payment resources. Actions taken in RyL ultimately results in real world Medicaid program dollars being saved for their intended use, with claims only being paid after all available third-party liabilities have been exhausted.
