Medicaid Modernization with Leidos

Navigating the complexities of Medicaid Enterprise Systems (MES) modernization is no small task. At Leidos, we meet the unique challenges of integrating systems, optimizing data management, ensuring interoperability, and executing seamless cloud migration. With a committed team of specialized analysts and subject matter experts, we deliver comprehensive solutions that empower organizations to provide better healthcare outcomes through technology-driven, science-backed, and human-centered strategies.

Enabling Rural Health Transformation Across the State

Leidos can create a connected rural health ecosystem that unites providers, Medicaid, and state agencies to deliver whole-person care. By expanding access through telehealth and digital tools, strengthening rural provider sustainability, reducing administrative burden, and enabling secure, data-driven oversight, this approach modernizes care while maximizing long-term value for the state.

IMPROVE
ACCESS

- Telehealth and mobile care expansion
- Real-time care coordination
- Support for rural hospitals / clinics

SUPPORT
ACCOUNTABILITY

- 360 beneficiary insights
- Population health analytics
- Program performance transparency

PROTECT STATE
INVESTMENTS

- Leverages existing systems
- Scalable statewide infrastructure
- Secure, compliant data sharing

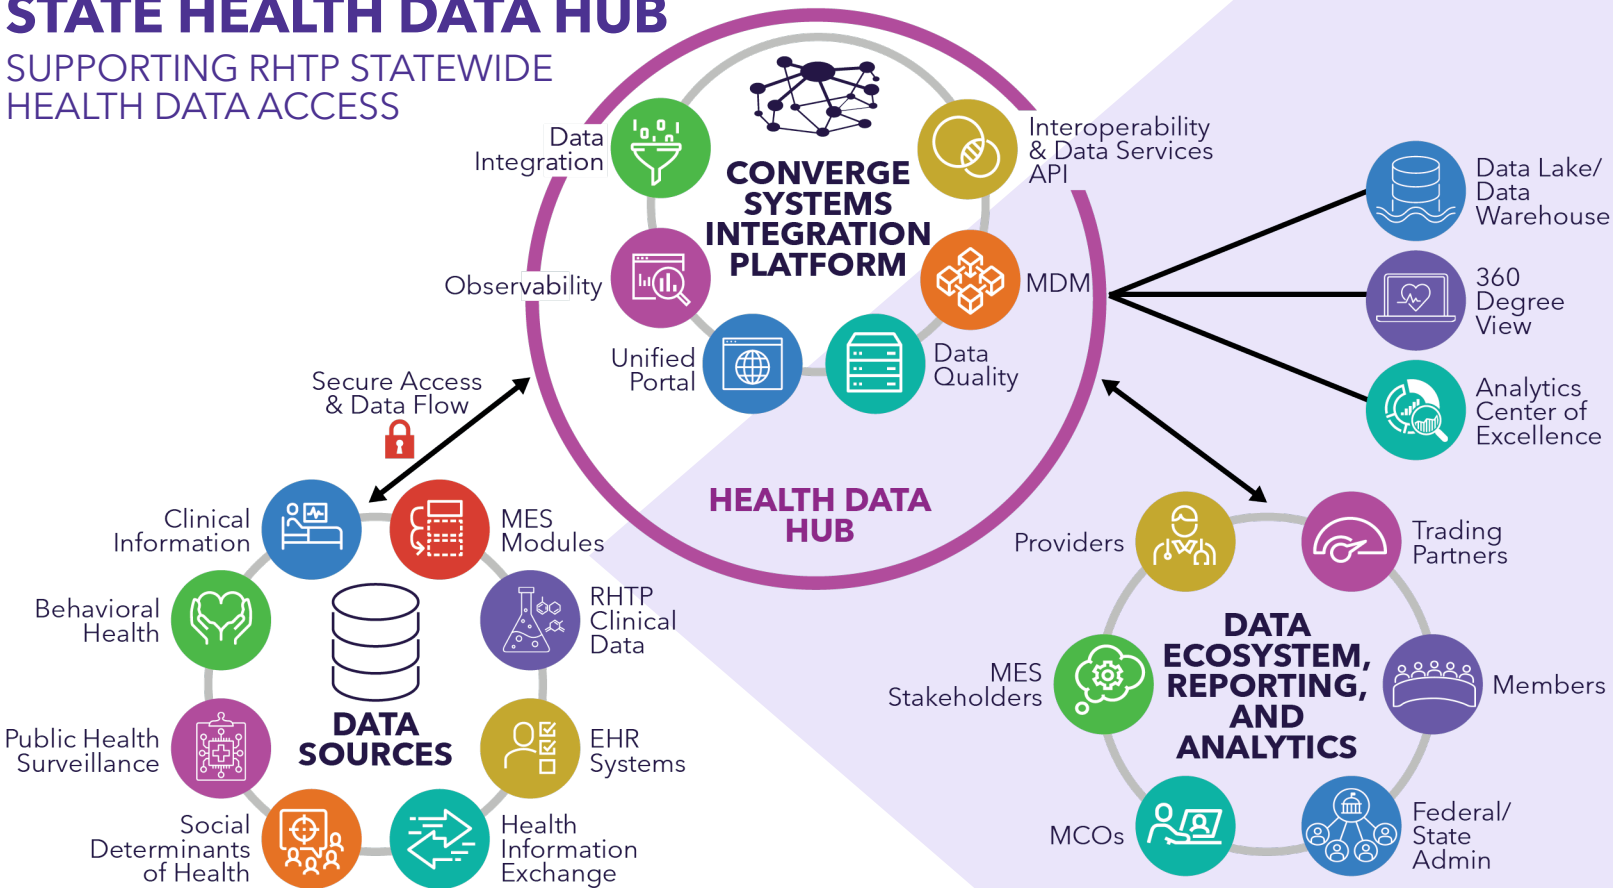

Leidos' Support for North Dakota MES - Project in Flight

In 2024, Leidos was awarded the SI contract by the State of North Dakota DHHS to modernize the System Integration platform. Leidos is implementing the CONVERGE SI platform by bringing the best of breed technology, processes, and people to the Medicaid Enterprise System Integration (MESI) project.

Our approach with upfront gap analysis, architecture review, and a highly configurable platform reduces the need for multiple change requests when new Medicaid modules integrate into the MES ecosystem, thereby making the integration more seamless and cost effective. ND went live November 2025.

STATE HEALTH DATA HUB

INCLUDING 145 MILLION AMERICANS
(40% OF THE POPULATION)
13 HIEs POWERED ACROSS 12 STATES

Next-Generation Data Platform for Health,
Combines Database, Workflow, and
Advanced Interoperability Technology

Leidos' CONVERGE platform is a purpose-built SaaS offering for Medicaid with a robust product roadmap designed to achieve CMS' modularity and interoperability requirements via its secure and scalable cloud agnostic platform.

MODERN UNIFIED PORTAL

- Single unified dashboard experience as configured through SSO
- External systems access
- Data Quality and SLA dashboard

INTELLIGENCE-DRIVEN CYBER DEFENSE AT SCALE

- Zero Trust Assessment and Transformation
- AI-Driven Cyber Operations
- Multi-Cloud Incident Response

FULL-SPECTRUM SOLUTIONS

- Cognitive Cyber Technology
- AEL House (Attack Exploitation Lab)
- Castle Clone (Cyber Digital Twin)

Our deep understanding of the cybersecurity domain, HHS and CMS regulations allows us to tailor our approach to the unique policies, programs, and participant needs of each state.

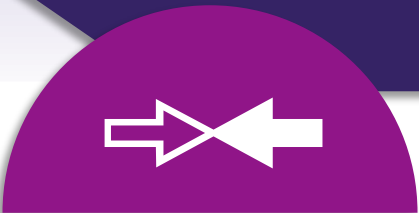

How We Help Modernize Medicaid and Human Services

We enable Agencies to improve the lives of those they serve by deploying our purpose-built, scalable, extensive solution developed from a set of standard, proven tools, in-use today, integrated for a best-value solution based on our experience, expertise, and innovations.

Unified Portal & SSO

Simplifies access and navigation across the Medicaid Enterprise System (MES) with a single login. Enhances both user experience and system security.

Data Integration

Speeds up onboarding of diverse data sources, structured or unstructured, regardless of format, system, or origin.

EDI X12 & SNIP Validation

Streamlines onboarding and validation of EDI transactions with built-in SNIP-level checks, accelerating implementation and ensuring HIPAA compliance.

Data Quality Framework

Monitors and enforces data quality standards using a rule-driven engine, interactive dashboards, detailed reports, and automated alerts.

Real-Time Interoperability

Enables real-time data exchange using native support for HL7v2, FHIR, and X12. Includes prebuilt transformations for HL7v2/v3, FHIR, CDA, IHE, DICOM, and custom APIs.

CMS Interoperability Compliance

Supports CMS-0057 and CMS-9115 compliance, empowering improved data access for members and providers and future-proofing against evolving CMS mandates.
