

MSQ29.2 - Data Migration Layout

Optum Rx documents all PBA data migration areas which include pharmacy claims, eligibility, provider enrollment, State MAC, prior authorization to name a few. For each inbound file, we document how the layout of the source data maps to the standard inbound interface for the Optum Rx PBA product. Similarly, we map our standard outbound file layouts to the State's custom file requirements. We further document the length of required history for load area along with the approach and schedule for securely receiving and loading the data. Although RxClaim maintains many input and extract standard formats, we're including several format examples for a typical PBA solution as exhibits in attachment MSQ29.2.
