

SCRAM Optix Analytics

Powered by Microsoft® PowerBI®, SCRAM Optix has a variety of dynamic, interactive analytic reports enabling users to visualize program activity, statistics, trends, and identify areas for improvement across all SCRAM technologies. The Participating Entity can filter by a number of program criteria to determine program performance across all caseloads, allowing quick access to analyze, and present key performance metrics and make informed decisions.

Inventory. These reports enable users to review the total utilization and inventory status for a program's equipment, including current inventory, inventory detail, current RMA, inventory trends over time, and device specifics. This resource helps our providers make decisions about how best to distribute devices across program locations and provides insight into how much of the device inventory is truly being used over time to promote inventory efficiency.

Monitoring and Compliance. Designed to help optimize a monitoring program by providing detailed data on the types of clients being monitored, the referring authorities, the types of alerts generated, and client compliance success. This can be used to help evaluate business operation efficiency and identify areas for growth or improvement.

GPS Compliance. Designed to provide information on client demographics, compliance rate, the amount and types of alerts generated, and the average amount of days clients are on the program before the first alert is generated. Each report can be filtered to pinpoint desired the desired critical data.

SCRAM Optix Program Reports

SCRAM Optix monitoring program reports offer unprecedented options to acquire, store, analyze, evaluate, and convert raw data into valuable information—such as compliance rates and average monitoring periods, as well as behavioral trends based on age, gender, severity of offense, and duration of monitoring. Unique data visualization provides quantitative and qualitative views along with powerful reporting that delivers instant access to program performance. Flexible templates deliver visual Key Performance Indicators (KPIs) for commonly accessed program performance metrics such as: compliance by officer, alert analysis, and breakdown by device, client, and courts. This unparalleled insight into an agency's program is easily accessed and intuitively queried so program efficacy can always be measured.

Alert Analysis Report. This report provides a graphical breakdown of alerts that can be displayed by device monitoring type for the previous month, quarter, or year. This analytical resource provides customers an efficient, time-saving tool by which to compare percentage of clients with violations as opposed to violations generated overall. Alert information is broken down by day of the week and each month of the year to help analyze client trends.

Client Breakdown Report. This provides a graphical breakdown of clients by offense type, client type, and referring court. In this report, data is displayed for completed clients monitored by offense or offender type, or specific court, during the time period specified. Each monitoring type displays the total clients monitored, average monitoring days, compliance percentage, and average days to the first violation over the last month, quarter, or year.

Client Compliance Report. Caseload management is simplified when data is straightforward and easily reviewed. This report shows daily compliance percentage per equipment type, providing number of clients monitored, amount of violations by type, and average number of monitoring days. The report can be displayed by week, month, or year. Officers can accurately assess program needs and compare individual program statistics to the national average, by product types, providing customers a simple and effective means to easily analyze program strengths and weaknesses.

Inventory Breakdown Report. This report provides a graphical breakdown of total equipment inventory by status, utilization percentage by month, and returned units (RMAs) broken down by type and month for a 12-month period. Officers can select any date and quickly view data by type, to assist in reconciling inventory records and establishing program trends for utilization and RMAs.

Samples are included on the following pages.

Alert Analysis

Jefferson County: Account: All

Analysis of Alerts during date range

For: 1/1/2017 - 9/17/2017

GPS	260	736	31,650	69%	2.50
GPS	Days in Period	Clients Monitored	Days Monitored	Compliance %	Average days to first alert.
18,739	149	0	69	722	22,989
Inclusion	Exclusion	Schedule	Strap Tamper	Device Tamper	Location Failure

Percentage of clients with alerts vs percentage of alerts generated.

Number of alerts generated by day of week.

Number of alerts generated by month, Last 12 Months.

Client Breakdown

Jefferson County: Account: All

Breakdown of Clients by Risk Assessment and Age For:

1/1/2017 - 9/17/2017

Bracelets broken down by Inventory Status for All

Percentage of bracelets in use for the last year for All

RMA's broken down by type and month over the last year for All

SCRAM GPS Reports

The monitoring software provides a wide range of reports and graphs, such as a snapshot of a single non-compliance event or a comprehensive view of a client's behavior over time. It allows supervising authorities to customize and tailor reporting that best suits their needs, further helping to reduce officer workload through exception-based reporting. Standard reports are available at multiple levels including Operations, Management, Inventory, and Billing and can be generated as applicable by customer, agency, court, judge, officer, or specific client. Reports can be viewed online, printed, saved, and emailed or downloaded as PDFs, Excel files, or Word documents. Following is a listing of SCRAM GPS reports, as well as some examples.

Client Profile Report. This report displays client profile information and can be printed for one or more active or inactive clients. If more than one client is selected, each client's profile will be on a separate page.

Charging Event Report. This report displays charging behavior for a selected client. It can span up to a 31-day window of time within the last 90 days. The “Report Summary” section displays the minimum, maximum, and average charge time as well as the number of charges during the report period. The “Daily Summary” section displays the minimum, maximum, and average charge time and the number of times charged for each specific day. The report also indicates whether a Battery Low or Battery Critical event was generated prior to plugging the device in. The “Charging Details” section indicates if the Fully Charged event was received and displays the total time from plugin to full charge.

Account Analysis Report. Evaluates the cost savings created by having clients wear bracelets versus having them incarcerated. The report shows how many clients are currently in the program, the average duration they have been in the program, and the total number of days all clients within the date range have been in the program ("Saved Bed Days"). Risk analysis data is also included.

Monthly Monitored Days Report. Provides information on active days in a given month for all clients in an account. It includes the client's device information as well as start and end dates.
