Table of Contents

Cover Letter **5**
Introduction to Strategic Communications 5
Required Statements and Acknowledgements (5.2.1 – 5.2.6) 6
Mandatory Minimum Requirements **8**
5.1 Signature Page 8
5.2 Cover Letter 8
5.3 Acknowledgement of Amendments 8
5.4 Executive Summary (5.4) **9**
A. Amazon Web Services (AWS) *9*
B. Collab9 ..... *10*
C. Strategic Communications' Value and Expertise *11*
D. Requirements Which Cannot be met *11*
General Requirements (5.5) **12**
A. 5.5.1 Usage Report Administrator *12*
B. 5.5.2 Cooperation with Entities *12*
C. 5.5.3 CSA STAR Registry Self-Assessments *12*
D. 5.5.4 Service Level Agreements (SLAs) *13*
5.6 Re-Certification of Mandatory Minimums and Technical Specifications 13
Confidential, Protected or Proprietary Information **13**
Exceptions and/or Additions to the Standard Terms and Conditions **14**
Business Information **19**
6.1 Business Profile 19
A. Organizational Structure *19*
B. Client Base *20*
C. Three Year Growth *21*
D. Employee Retention Rates *21*
E. Experience Providing Cloud Solutions *21*
6.2 Scope of Experience 23
A. SEWP V *23*
B. CIO-CS *24*
C. Space and Naval Warfare (SPAWAR) Communication Technology Products *25*
D. USPTO AWS Cloud Products and Services *26*
E. Oakland County, Michigan, Cloud Services *26*
6.3 Financials 27
6.4 General Information 28
A. 6.4.1 Pertinent General Information *28*
B. 6.4.2 Auditing Capabilities *35*
6.5 Billing and Pricing Practices 35
A. 6.5.1 Billing and Pricing Practices: Transparency and Ease of Understanding *35*
B. 6.5.2 Cost Impacts for Consideration *37*
C. 6.5.3 NIST Compliance *40*
6.6 Scope and Variety of Cloud Solutions 40
6.7 Best Practices 41
Organization and Staffing **45**

7.1 Contract Manager 45
A. 7.1.1 Contract Manager 45
B. 7.1.2 Experience of Contract Manager 45
C. 7.1.3 Roles and Responsibilities of Contract Manager 47
Technical Requirements 48
8.1 Technical Requirements 48
A. 8.1.1 Identification of Cloud Service Models and Deployment Models 48
B. 8.1.2 NIST Essential Characteristics 48
C. 8.1.3 Subcategories 50
D. 8.1.4 Compliance with Requirements 50
A. 8.1.5 Adherence to Scope of Services 50

STRATEGIC COMMUNICATIONS
VOICE, VIDEO, DATA & CLOUD SOLUTIONS
"NO LIMITS, NO BOUNDARIES"

10 March 2016

State of Utah Division of Purchasing
Attn: Christopher Hughes, Assistant Director
3150 State Office Building, Capitol Hill
Salt Lake City, Utah 84114-1061
Via BidSync Portal

RE: Response to Utah Solicitation Number CH16012

Dear Mr. Hughes:

Strategic Communications (Strategic Communications) is pleased to submit an offer in response to Utah Solicitation Number CH16012 to provide private cloud solutions.

Introduction to Strategic Communications

Headquartered in Louisville, Kentucky and established in 1994, Strategic Communications is a Woman Owned Small Business (WOSB). Strategic Communications is a Cloud Solutions Provider, Integrated Solutions Provider and Value Added Reseller (VAR) focused on serving commercial and government customers. Strategic Communications has multiple offices across the United States, including an office in Salt Lake City, Utah, located at 2724 S 3600 W #L, West Valley City, Utah, 84119. Our expertise in consulting, designing, engineering and installing Information Technology (IT) solutions enables Strategic Communications to provide customized and scalable solutions to fit unique requirements. Strategic Communications offers 20 years of exceptional experience in the VAR space. Our aggregate of over $290M in sales since targeting the Federal sector in 2008 places Strategic Communications as one of the top VARs in the industry. With this substantial volume of business comes valuable and relevant perspective on how Strategic Communications defines VAR expertise in delivering robust and scalable solutions to our customers. Strategic Communications offers a proven ability to unite qualified resources, proven business processes, engineering excellence, Original Equipment Manufacturer (OEM) coordination, and supply chain management ability.

Strategic Communications has been providing Information Technology support to the State of Utah since 2012. We have an established relationship with the State of Utah and proven performance supporting the State of Utah.

Strategic Communications feels an important factor in the Technology sector is a company's ability to stay abreast of emerging technologies. Strategic Communications consistently

participates in industry forums and conferences. We exert leadership by contributing to relevant industry standards via identification and plan implementation for emerging technology needs, trends, and solutions.

Required Statements and Acknowledgements (5.2.1 – 5.2.6)

5.2.1. Strategic Communications understands we may be required to negotiate additional terms and conditions, including additional administrative fees, with Participating Entities when executing a Participating Addendum.

5.2.2. Strategic Communications has developed this entire proposal internally. The individuals contributing to the content in this proposal include Chris Mills and Bobby Nakanelua of our Cloud Solutions Team; and Melissa Barnett of our Proposal Development Team.

5.2.3. Strategic Communications certifies we are not currently suspended, debarred or otherwise excluded from federal or state procurement and non-procurement programs.

5.2.4. Strategic Communications acknowledges a 0.25% NASPO ValuePoint Administrative Fee and any Participating Entity Administrative fee will apply to total sales for the Master Agreement(s) awarded from this RFP.

5.2.5. Strategic Communications is capable of providing all service models, including SaaS, IaaS and PaaS. Strategic Communications is offering a large portfolio of cloud solutions available in the IaaS, PaaS and SaaS Service models utilizing Public, Community and Hybrid Deployment models. The Service and Deployment models provide everything from unmanaged servers, storage and virtual cloud networking to managed servers, email and virtual desktops.

A complete listing of our solutions with descriptions has been provided in Attachment SC-6.

5.2.6 Strategic Communications is capable of storing and securing Low Risk Data and Medium Risk Data. All of Strategic Communications' IaaS, PaaS and SaaS offerings are compliant to store and process Low Risk data as defined by FIPS PUB 199. Strategic Communications' IaaS, PaaS and SaaS offerings through the AWS GovCloud community cloud are accredited to store and process Low and Medium Risk data as defined by FIPS PUB 199.

Sincerely,
STRATEGIC COMMUNICATIONS

Melissa Barnett
Proposal Manager

SC-7	2013 Tax Filing – CONFIDENTIAL
SC-8	2014 Tax Filing – CONFIDENTIAL
SC-9	Bank Letter from Old National Bank – CONFIDENTIAL
SC-10	Strategic Communications Managed Services SLA
SC-11	AWS SLAs
SC-12	Collab9 SLA
SC-13	CAIQ (RFP Exhibit 1 to Attachment B) for AWS Cloud Solutions: AWS Risk and Compliance Whitepaper
SC-14	AWS ISO/IEC 27001:2013 Certification
SC-15	Resume for Bobby Nakanelua, Proposed Contract Manager
SC-16	Sample Performance Report
SC-17	Detailed Price List
SC-18	Labor Category Descriptions

Mandatory Minimum Requirements

5.1 Signature Page

Strategic Communications has included the Signature Page as an Attachment to the Cover Letter of this Proposal Package.

5.2 Cover Letter

Strategic Communications has included a Cover Letter in this Proposal Package, including all required statements and acknowledgements.

5.3 Acknowledgement of Amendments

Strategic Communications has read, reviewed and understands the totality of Solicitation No. CH16012, including the final RFP document posted on February 10, 2016. To further acknowledge amendments to Solicitation CH16012, Strategic Communications has included an executed copy of the Solicitation attachment titled "**Acknowledgement of Amendments to RFP**".

5.4 Executive Summary (5.4)

Strategic Communications has developed a comprehensive and detailed proposal package offering our cloud solutions. Our trusted partners, Amazon Web Services (AWS) and Collab9, stand out in the world of Cloud Solutions. We have chosen these partners based on their expertise and innovation in the world of cloud offerings.

A. Amazon Web Services (AWS)

Amazon has a long history of using a decentralized IT infrastructure. This has enabled Amazon's development teams to access compute and storage resources on demand and has increased overall productivity and agility. By 2005, Amazon had spent over a decade and millions of dollars building and managing the large-scale, reliable, and efficient IT infrastructure that powered one of the world's largest online retail platforms.

Amazon launched Amazon Web Services, Inc. (AWS) so other organizations could benefit from Amazon's experience and investment in running a large-scale, distributed, transactional IT infrastructure. AWS has been operating since 2006 and now serves more than one million active customers worldwide.

Using AWS, customers can requisition compute power, storage, and other services in minutes and have the flexibility to choose the development platform or programming model that makes the most sense for the problems they are trying to solve. Customers pay only for what they use, with no up-front expenses or long-term commitments, making AWS a cost-effective way to deliver applications.

The Differences that Distinguish AWS

AWS is readily distinguished from other vendors in the traditional IT computing landscape because it is:

- **Flexible**. AWS enables organizations to use the programming models, operating systems, databases, and architectures with which they are already familiar. In addition, this flexibility helps organizations mix and match architectures in order to serve their diverse business needs.
- **Cost effective**. With AWS, organizations pay only for what they use, without up-front costs or long-term commitments.
- **Scalable and elastic**. Organizations can quickly add and subtract AWS resources to and from their applications in order to meet customer demand and manage costs.
- **Innovative**. AWS launched 722 new services and features in 2015. Our pace of innovation is funded and sustained through our economies of scale and commitment to delivering the products and services that matter most to our customers. Our continual innovation ensures that customers maintain state-of-the-art IT infrastructure without having to make recapitalization investments.

- **Secure**. In order to provide end-to-end security and end-to-end privacy, AWS builds services in accordance with security best practices, provides the appropriate security features in those services, and documents how to use those features.
- **Experienced**. When using AWS, organizations can leverage AWS's many years of experience delivering large-scale, global infrastructure in a reliable, secure fashion.

B. Collab9

Strategic Communications' proposed Collab9 HCS Secure FedRAMP/FISMA solution drives value in the collaboration solution environment, while providing an easy, secure utility consumption implementation. We have quoted the top of the line collab9 bundle, Collaboration Plus, which include capabilities to support up to ten (10) simultaneous devices, Mobility, Presence, Instant Messaging, Voice and Voice Mail, Video Telephony. The Collab9 HCS Secure FedRAMP/FISMA solution also can be integrated into MS-Lync, Google Apps and others.

Value for Collaboration Customers

Consuming collaboration services from the cloud, businesses have the flexibility to choose the collaboration solutions they need for specific teams or individuals, not just sites. They can choose simple-to-consume packages or "as a service" solutions to be deployed wherever and whenever they are required. These solutions can be turned on at pace and scaled as required. In addition, they can be managed efficiently through the proposed management platform. This flexibility and agility safeguards and maximizes investments at the same time as providing IT agility that enables efficient resource management. Existing collab9 Cloud Collaboration customers are realizing the following benefits:

- Enable and accelerate transition to collaboration (customer journey)
- Provide on-demand services with predictable costs
- IT agility (standardized/consolidated services and management)
- Evergreen applications and services (features and functionality)
- Ability to ramp service up or down (flexibility)

Benefits of Collab9 Cloud Solutions

Some of the overall benefits and values accorded NASPO Purchasing Entities with the Collab9 HCS Secure FedRAMP/FISMA solution are as follows:

- **Security**: FedRAMP/FISMA in process of certification, which provides NASPO Purchasing Entities a high level of relief and peace of mind due to the levels of security implemented on the Collab9 HCS Secure FedRAMP/FISMA solution.
- **Enhanced user experience**: The proposed solution delivers people-centric collaboration applications and services. This can satisfy student, teachers and administrators demands by offering a broad service catalog. In addition, it facilitates a consistent user experience across all deployment models and devices. A better user experience means happier customers.

- **Improved resource optimization**: The proposed platform improves total cost of ownership (TCO) (including OpEx) for NASPO Purchasing Entities while preserving capital and core resources. In addition, it can help NASPO Purchasing Entities consolidate, unify, and automate IT infrastructure and operations. The Collab9 HCS Secure FedRAMP/FISMA solution also manages investment protection and extension, while maintaining interoperability.
- **Increased management control**: The Collab9 HCS Secure FedRAMP/FISMA solution improves the pace and consistency of application deployments and upgrades. It also reduces the risk of technology obsolescence, and helps NASPO Purchasing Entities maintain full visibility and control. NASPO Purchasing Entities can gain peace of mind and retain telephony reliability in the cloud through Cisco Unified Survivable Remote Site Telephony (SRST), offered by Strategic Communications.
- **Improved service innovation**: The proposed platform guarantees that NASPO Purchasing Entities leverage the latest technology and remain evergreen. Strategic Communications provides a flexible IT model and integrate it with business applications. This allows NASPO Purchasing Entities to align IT resources to business needs and gain rapid and full user adoption.
- **Lower TCO**: NASPO Purchasing Entities can enjoy a lower TCO because the proposed solution offers robust management tools that deliver a high degree of automation, as well as ease of administration, flexibility, and control. Automated provisioning lowers the resource burden on administrators, while delegated administration can provide customers with control and thereby reduce the management overhead on NASPO Purchasing Entities. The proposed solution also reduces support calls and enhances worker productivity with a common dashboard and real-time fault correlation capabilities, as well as root cause analysis and service impact analysis that simplifies troubleshooting across all domains.

The proposed solution is comprised of four integrated components:

- Collaboration applications
- Optimized virtual environment
- Network architecture
- Flexible management platform

C. Strategic Communications' Value and Expertise

Strategic Communications' proposed Cloud solutions stand above the competition due to our established world-class services, uniquely integrated with the solution set proposed. Our Service standards and delivery of solutions have been the catalyst for the company's impressive growth and customer retention. The uniqueness of our client relationships, technological expertise, and Original Equipment Manufacturer relationships has allowed our organization to craft solutions that become market trends.

D. Requirements Which Cannot be met

Strategic Communications is able to meet all requirements.

General Requirements (5.5)

A. 5.5.1 Usage Report Administrator

Strategic Communications agrees to provide a Usage Report Administrator responsible for the quarterly sales reporting described in the Master Agreement Terms and Conditions, and, if applicable, any Participating Addendums.

B. 5.5.2 Cooperation with Entities

Strategic Communications agrees to cooperate with NASPO ValuePoint, SciQuest, and any authorized agent or successor entity to SciQuest, with uploading ordering instructions.

C. 5.5.3 CSA STAR Registry Self-Assessments

Strategic Communications agrees to complete, provide and maintain a completed CSA STAR Registry Self-Assessment. Strategic Communications has included a completed Consensus Assessments Initiative Questionnaire (CAIQ) as part of this Proposal Package and will submit CAIQ(s) to the CSA STAR Registry to indicate compliance with CSA best practices. Strategic Communications has also included report documentation which demonstrates compliance with Cloud Controls Matrix (CCM) as part of this Proposal Package. Strategic Communications will also submit this documentation to the CSA STAR Registry to indicate compliance with CSA best practices. Strategic Communications represents and warrants the included CAIQ(s) and reports are accurate and current.

Strategic Communications' AWS offerings are compliant with the Level 1 CSA STAR Registry Self-Assessment.

- **Amazon Web Services (AWS) Cloud Offerings:** Strategic Communications has included AWS's Responses to the CAIQ (v3) within **Attachment SC-13.** Attachment SC-13 is AWS's Risk and Compliance Whitepaper. The CAIQ responses are found on Pages 26-62. All of the AWS self-assessed assertions within the CSA STAR Registry Self-Assessment are backed by independent, third party audits across multiple compliance programs.

- **Collab9 Cloud Offerings:** Strategic Communications' Collab9 Cloud Offerings are compliant with the CSA STAR Registry requirements and Collab9 has been registered in the CSA STAR Registry. Collab9 has submitted the Census Assessments Initiative Questionnaire (CAIQ) to Cloud Security Alliance as of February 25, 2016 and registered under CSA STAR Self-Assessment.

D. 5.5.4 Service Level Agreements (SLAs)

Strategic Communications has included the following sample Service Level Agreements which define performance and other operating parameters within which the infrastructure must operate to meet IT System and Purchasing Entity's requirements:

- Attachment SC-10: Strategic Communications Managed Services SLA
- Attachment SC-11: Amazon Web Services (AWS) SLAs
- Attachment SC-12: Collab9 Cloud Services SLA

5.6 Re-Certification of Mandatory Minimums and Technical Specifications

Strategic Communications acknowledges the requirement to annually certify to the Lead State that we still meet or exceed the technical capabilities discussed in our Proposal Package.

Confidential, Protected or Proprietary Information

Strategic Communications has included the following **CONFIDENTIAL** documents as ATTACHMENTS to this Proposal:

- Attachment SC-7. 2013 Tax Filing
- Attachment SC-8. 2014 Tax Filing
- Attachment SC-9. Bank Letter from Old National

These documents are **CONFIDENTAL** and have been marked as such.

Exceptions and/or Additions to the Standard Terms and Conditions

Strategic Communications is providing the following proposed exceptions and/or additions to the Standard Terms and Conditions.

MSA Terms and Conditions Compliance Checklist				
#	**Title**	**Comply**	**Exception**	**Not Comply**
7.	Termination	X	X	
8.	Confidentiality, Non-Disclosure, and Injunctive Relief	X	X	
10.	Defaults and Remedies	X	X	
13.	Indemnification	X	X	
16.	Insurance	X	X	
29.	Title to Product	X	X	
30.	Data Privacy	X	X	
31.	Warranty	X	X	
32.	Transition Assistance	X	X	
33.	Waiver of Breach	X	X	
37.	Governing Law and Venue	X	X	
43.	Limitation of Liability		X	

For all items marked as "Exception" in the Master Agreement Terms and Conditions Compliance Checklist above, Strategic Communications provides the following Explanations below.

Exception Explanations		
#	**Title**	**Explanation of Exception**
7.	Termination	Strategic Communications believes that tying termination to a party's failure to timely cure a default per Section 10(b) is the appropriate mechanism for termination.
8.	Confidentiality, Non-Disclosure, and Injunctive Relief	Strategic Communications has amended the definition of confidential information under the MSA to "non-public information that is designated confidential or that a reasonable person should understand to be confidential, including (1) Data; (2) any Purchasing Entity's records, (3) personnel records, and (4) information concerning individuals. Confidential Information does not Include information that (a) becomes publicly available without a breach of this agreement, (b) was lawfully known or received by the receiving Party without an obligation to keep it confidential, (c) is independently developed, or (d) is a comment or suggestion one party volunteers about the other's business, products or services." Strategic Communications also believes that the standard of care in handling Confidential Information should be "the same degree of

		care it applies to its own Confidential information, but in no event less than a reasonable degree of care" Lastly, Strategic Communications wants to make clear that certain proprietary technology core to its business remains confidential and that it belongs to Strategic Communications.
10.	Defaults and Remedies	Strategic Communications believes that this Section should be mutual with respect to the ability to cure defaults
13.	Indemnification	This section protects the Purchasing Entity from infringement claims that are within Strategic Communications' reasonable ability to investigate and remedy. Generally, only claims of infringement of US patents, copyrights and trade secrets are included because it would be unduly burdensome to investigate those rights in all other countries, in most cases.
16.	Insurance	Strategic Communications has changed the limits on the General Liability requirement to reflect its current coverage of $1,000,000 per occurrence with a $15 million umbrella policy. Strategic Communications has changed the Professional Liability coverage from an "occurrence" form to a "claims made" form as that is how such coverage is written and is what Strategic Communications currently has. Strategic Communications has also changed the limits on the Professional Liability to reflect its current insurance program, which provides $10,000 per claim with $1,000,000 per claim for Network Security.
29.	Title to Product	Strategic Communications has deleted "perpetual" license and replaced it with a license "for the period that the Services are being provided," which Strategic Communications believes should provide the Purchasing Entity with a sufficient license.
30.	Data Privacy	Strategic Communications has added an additional paragraph to this Section to make clear how Data is to be handled under the MSA and to make clear who is responsible for such Data by inserting the following: "All Data which the Lead State makes available to Strategic Communications in connection with this Agreement, including data provided via use of any API is stored in a private and secure fashion, will not be used by Strategic Communications except as necessary to provide the Services. Lead State hereby grants to Strategic Communications a limited, non-exclusive, non-transferable, royalty-free right to use, display, transmit and distribute the Data solely in connection with providing the Services to Lead State. Except as provided in this Agreement, Lead State shall be solely responsible for providing, updating, uploading and maintaining all Data. The content of Data shall be Lead State's sole responsibility. Strategic Communications shall operate the Services in a manner that provides reasonable information security for Data, using commercially reasonable data backup, security, and recovery protections."

31.	Warranty	Strategic Communications has accepted the terms of this Section but has added two additional paragraphs – one with regard to malware "Strategic Communications will make commercially reasonable efforts to ensure that the Products provided under this Master Agreement will not contain any virus, Trojan horse, or worm, or other software designed to permit unauthorized access to, or to erase or otherwise harm, Purchasing Entity's software, hardware, or data." The other additional paragraph mirrors the Uptime guarantee in the SLA to make clear how and when the Services will be maintained "Subject to the terms and conditions of this Agreement, Contractor shall use commercially reasonable efforts to provide access to the Services for twenty-four (24) hours a day, seven (7) days a week throughout the term of this Agreement. Purchasing Entity agrees that from time to time the Services may be inaccessible or inoperable for various reasons, including (i) equipment malfunctions; (ii) periodic maintenance procedures or repairs which Contractor may undertake from time to time; or (iii) causes beyond the control of Contractor or which are not reasonably foreseeable by Contractor, including interruption or failure of telecommunication or digital transmission links, hostile network attacks or network congestion or other failures (collectively "Downtime"). Strategic Communications shall use commercially reasonable efforts to provide twenty-four (24) hour advance notice to Purchasing Entity in the event of any scheduled Downtime. Strategic Communications shall have no obligation during performance of such operations to mirror Data on any other server or to transfer Data to any other server. Strategic Communications shall use commercially reasonable efforts to minimize any disruption, inaccessibility and/or inoperability of the Services in connection with Downtime, whether scheduled or not." Lastly Strategic Communications has inserted its standard disclaimer with regard to remedies in the event of a breach of warranty and with respect warranties not contained in the MSA: "Contractor's sole liability (and Lead State's, Purchasing Entity's and Participating Entity's exclusive remedy) for any warranty claim shall be for Contractor to re-perform the deficient Services, or, if Contractor falls to remedy such deficiency within thirty (30) days of notice of a claim, to void the invoice for the deficient Services. Contractor shell have no obligation with respect to a warranty claim (i) if notified of such claim more than thirty (30) days after the Services in question were first performed or (ii) if the claim is the result of third party hardware or software failures, or the actions of Lead State, Purchasing Entity or Participating Entity, or a third party. THIS SECTION 31 SETS FORTH THE ONLY WARRANTIES MADE BY STRATEGIC COMMUNICATIONS. STRATEGIC COMMUNICATIONS HEREBY DISCLAIMS ALL OTHER

		WARRANTIES, CONDITIONS OR UNDERTAKINGS, EXPRESS OR IMPLIED, STATUTORY OR OTHERWISE, INCLUDING, BUT NOT LIMITED TO, THE WARRANTIES OF MERCHANTABILITY, FITNESS FOR A PARTICULAR PURPOSE AND NON-INFRINGEMEN. ALL SOFTWARE AND HARDWARE PROVIDED OR INSTALLED BY STRATEGIC COMMUNICATIONS ARE SUBJECT EXCLUSIVELY TO THE RESPECTIVE MANUFACTURER'S WARRANTY." This section clarifies Strategic Communications' position on other warranties, including warranties implied by the Uniform Commercial Code and warranties on items not developed by Strategic Communications. This disclaimer protects Strategic Communications from a claim that it has made other express or implied warranties, such as in proposals or promotional materials. It specifically states Strategic Communications does not warrant that work is "fit for Purchasing Entity's purpose." Strategic Communications does not know all of Purchasing Entity's purposes and cannot make any such warranty. This section outlines the expectations of the parties by clarifying that all warranties must be specified in the MSA.
32.	Transition Assistance	Strategic Communications has deleted the reference to the Purchasing Entity controlling the security requirements in favor of the level of security stated in the Participating Addendum, which Strategic Communications believes will more clearly set forth security requirements.
33.	Waiver of Breach	Strategic Communications has made this section applicable to all Parties, which continues to protect the Lead State and the Purchasing and Participating Entities while affording Strategic Communications the same protection.
37.	Governing Law and Venue	The purpose of this section is to map out the process of dispute resolution. It is important that this section provides for a progression from informal dispute resolution, including possible mediation, to arbitration and in some cases a court appearance, because of the costliness and much extended time periods of litigation. This section also limits discovery in any arbitration proceeding because discovery can be costly, distracting and time intensive. This section also provides for proceedings to take place in Salt Lake City, Utah (Lead State's principal place of business) and governed by Utah law. Strategic Communications believes this insertion also creates strong incentives to resolve disputes informally, instead of resorting to legal action.
43.	Limitation of Liability	This provision caps the amount for which Strategic Communications will be held liable for damages that flow directly from a breach of the MSA or an Order or a problem with the Services or Products.

		This provision is also mutual, and protects the Purchasing Entity as well as Strategic Communications. Strategic Communications' ability to offer its very best pricing is contingent upon its ability to quantify its liability under the MSA.

Business Information

6.1 Business Profile

Strategic Communications is a Women Owned Small Business (WOSB), MBE and WBE providing Managed Cloud Services for Government and Commercial entities. Strategic Communications leverages 20 years of experience delivering IT and infrastructure solutions for the Government as the cornerstone of its managed services practice. Strategic Communications is an authorized government reseller and partner for many of the market leaders in cloud services and solutions for the Public Sector.

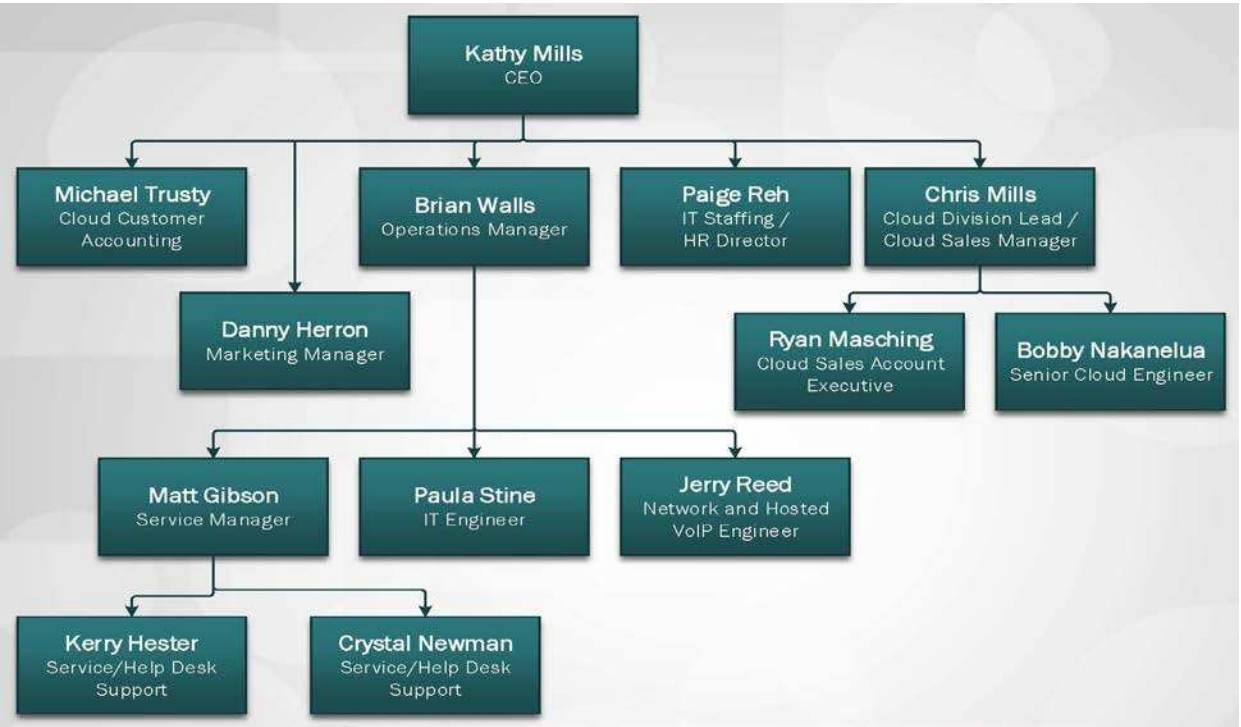
Year Started: 1994

A. Organizational Structure

Strategic Communications is an S Corporation organized under the laws of the Commonwealth of Kentucky. Our Corporate structure begins with the CEO, Kathy Mills and her passionate commitment to the success of Strategic Communications. Ms. Mills believes in being involved in the day-to-day operations of Strategic Communications and is a very hands-on CEO.

Strategic Communications has an established Cloud Division. Our Cloud Division is focused solely on Cloud Services and Cloud Sales. Our Cloud Division is supplemented by Operations, Accounting, IT Staffing, Marketing, and Engineering divisions. Strategic Communications also has a full Service Team which staffs a Help Desk and provides support to our clients.

Strategic Communications' Organizational Structure is as follows in the chart below.



B. Client Base

Strategic Communications has a varied client base which includes both Government and Commercial customers.

A sampling of some of our Government clients include:

- United States Air Force
- United States Marine Corps
- United States Navy
- United States Army
- United States Army Aviation and Missile Command (AMCOM)
- Network Enterprise Technology Command (NETCOM)
- Redstone Arsenal
- Air Force Research Laboratory
- United States Army Contracting Command, Fort Knox
- Defense Information Systems Agency (DISA)
- Defense Information Technology Contracting Organization (DITCO)
- Aberdeen Proving Ground
- United States Patent and Trademark Office (USPTO)
- United States Central Command (CENTCOM)
- Naval Warfare Development Command
- Space and Naval Warfare (SPAWAR)
- Department of Veteran's Affairs
- National Aeronautics and Space Administration (NASA)
- State of Utah
- Oakland County, Michigan
- Leelanau County, Michigan
- Montgomery County
- Department of Defense Education Activity (DODEA)
- Domestic Dependent Elementary and Secondary Schools (DDESS)
- Joint Task Force, Guantanamo Bay, Cuba (JTFGTMO)
- Marine Corps Network Operations and Security Command (MCNOSC)
- Metro Louisville Kentucky Government

A sampling of some of our Commercial clients include:

- Amazon
- S&R Trucking
- Lexington Christian Academy

Strategic Communications supports contracts nationwide and provides support to the Government on contracts in international locations as well.

Strategic Communications focuses on the Information Technology (IT) and Communications industry. Our primary market sector is focused on Government clients.

C. Three Year Growth

Strategic Communications has grown from 29 employees in 2013 to 40 employees in 2015. Strategic Communications' revenues grew from $45,497,554.21 in 2011 to $97,339,357.83 in 2013.

D. Employee Retention Rates

Strategic Communications' employee retention rates continually remain above the industry average. The Information Technology industry average retention rate is less than 70%, according to Equifax turnover rate reports (Source: https://www.talx.com/benchmarks/turnover/).

Strategic Communications' employee retention rate for 2013 was 93%, 2014 was 80% and 2015 was 80%.

E. Experience Providing Cloud Solutions

Strategic Communications meets and exceeds the requirement for this solicitation by providing cloud solutions to our end users for a minimum of three (3) years as presented in this solicitation. We have provided Cloud Solutions to our customers since 2012 and actually began using Cloud Services internally in 2012 to support our own internal business functions.

Cloud Customer: Oakland County, Michigan, Cloud Services

Strategic Communications was awarded a contract to support Oakland County, Michigan, with Amazon Web Services (AWS) hosting and licenses in June 2015. Founded in 1819, Oakland County is the second largest county in the state of Michigan.

Strategic Communications designed and implemented a custom environment within the AWS Cloud which allowed Oakland County to make modifications to their own environment. This capability was new for Oakland County. Strategic Communications seamlessly transitioned or

obtained new AWS licensing for various products to keep Oakland County in compliance with requirements. We performed a full analysis of Oakland County's environment to ensure full understanding of the various AWS services they were using and how best to offer our guidance. In an effort to ensure Oakland County's environment was operating within industry best practice, Strategic Communications performed upgrades to infrastructure and migration of various instances to ensure they are position for future growth, security and disaster recovery/COOP.
With Strategic Communications' guidance, engineering and monitoring, Oakland County has transitioned to a solid hosting environment for their website, applications and G2G marketplace. Oakland County has realized a reduction in their expenditures of over $150,000 by utilizing Strategic Communications' Cloud Services, and is using their Cloud platform as a template for surrounding counties to emulate.

Cloud Customer: Leelanau County, Michigan, Cloud Services

Strategic Communications was contracted to support Leelanau County, Michigan with cloud services in September 2015. Strategic Communications understood Leelanau County required a solution to quickly and effectively migrate data from the existing hosting platform and store seldom-accessed electronic records. The proposed solution needed to be scalable, user friendly and, above all, secure. Strategic Communications' Cloud Team completed a full assessment and analysis of Leelanau's current hosting and engineered a robust solution which accommodated and exceeded the County's needs.

Strategic Communications proposed Amazon Web Services (AWS) as the trusted Cloud platform for this project. Strategic Communications utilized Amazon AWS's Virtual Private Cloud (VPC) services with Elastic Cloud Compute (EC2) for the traditional server hosting component. Amazon's Simple Storage Service (S3) was chosen to provide unlimited object storage use by Leelanau's hosted servers and on premise location. For digital archiving, Strategic Communications was able to setup Amazon's Glacier Storage solution to provide a low cost secure storage that would meet organizational retention requirements.

Strategic Communications' solution led to a 20% increase in productivity for Leelanau County due to enhanced capabilities of the implemented Cloud solution and additional Storage resources available on the network, resulting in a 15% performance increase. Strategic Communications was able to provide the proposed Cloud solution within required budget constraints.

Cloud Customer: USPTO AWS Cloud Products and Services

Strategic Communications was awarded contract number DOC46PAPT1300462 for the United States Patent Office (USPTO) / Department of Commerce in July 2012 to provide Automatic Data Processing (ADP) Components and Information Technology Products and Services, including cloud services. Strategic Communications has been providing the USPTO with Amazon Web Services (AWS) on the U.S. GovCloud platform since 2012.

6.2 Scope of Experience

Strategic Communications is very experienced with large consortium-type contracts, particularly in the Government sector. As requested, we have provided details below on the five (5) largest contracts we have worked on during the last two (2) years which are similar to the requirements of this RFP.

A. SEWP V

Summary: During May of 2015, Strategic Communications was awarded contract number NNG15SC90B under the Solutions for Enterprise-Wide Procurement (SEWP) V Contract Vehicle for the National Aeronautics and Space Administration (NASA). Since May 01, 2015, we have fulfilled 91 orders under this contract, at a total value of $5,384,937.43. This contract will continue for five (5) years, until April 30, 2020, and has a total value of $20,000,000,000.00.
Contract Value: $20,000,000,000.00

Scope of Contract: SEWP, is a multi-award Government-Wide Acquisition Contract (GWAC) vehicle focused on commercial IT products and product based services. Through SEWP, Strategic Communications offers a wide range of commercial advanced technology including tablets, desktops and servers; IT peripherals; network equipment; storage systems; security tools; software products; cloud based services; telecommunications; Health IT; sensors; video conferencing systems and other IT and Audio-Visual products. Product-based services, such as installation, training, maintenance and warranty, are also available through SEWP. As an OMB authorized GWAC, the SEWP contracts are utilized by all Federal Agencies.

Location(s) of Performance: Multiple locations both CONUS and OCONUS. As of 01 March 2016, we have supported work in: AK, AL, CA, CO, DC, DE, FL, IL, LA, MA, MD, MO, MS, NC, NH, NJ, NM, OH, PA, RI, SD, TX, and VA

Recency of Contract: Strategic Communications has worked on this contract within the last two (2) years, meeting the requirement for the NASPO Contract RFP.

Similarity to the NASPO Contract: SEWP is Government-wide and available to all Federal Agencies, similar to the way the NASPO Contract is intended to be available to all State Government and other Government and Educational entities. The SEWP contract includes commercial IT products, which includes Cloud Products and Services.

B. CIO-CS

Summary: During May of 2015, Strategic Communications was awarded contract number HHSN316201500048W for Chief Information Officer – Commodities and Solutions (CIO-CS) in support of the National Institutes of Health (NIH). Since May 01, 2015, we have fulfilled 39 orders under this contract, at a total value of $3,982,975.88. This contract will continue for ten (10) years, until April 30, 2025, and has a maximum value of $20,000,000,000.00.

Contract Value: $20,000,000,000.00

Scope of Contract: The CIO-CS contract incorporates Information Technology-related, products and services including deployment and installation, maintenance and training, engineering studies, enterprise licenses and extended warranties, cloud, mobility, collaboration tools, web and video-conferencing, cyber security, virtualization and health and biomedical IT. CIO-CS Contract Holders deliver innovative and secure commodity solutions for agencies across the federal government and initiatives as diverse as Cloud Computing, Cyber Security and Mobility. CIO-CS offers the latest cloud collaboration tools including email, SharePoint, video/web conferencing, custom social networks, wikis, microblogs, CRM, IM and more.

Location(s) of Performance: Multiple locations both CONUS and OCONUS. As of 01 March 2016, we have supported work in: CA, DAC, MD, OR, SC, SD and VA.

Recency of Contract: Strategic Communications has worked on this contract within the last two (2) years, meeting the requirement for the NASPO Contract RFP.

Similarity to the NASPO Contract: CIO-CS is available to a multitude of Government agencies, similar to the way the NASPO Contract is intended to be available to all State Government and other Government and Educational entities. The scope of CIO-CS includes cloud computing services, most often deployed via a Managed Services Model which can also include Infrastructure as a Service (IaaS), Platform as a Service (PaaS), and Software as a Service (SaaS). This contract offers the same type of Cloud Solutions as is being requested under the NASPO Contract.

C. Space and Naval Warfare (SPAWAR) Communication Technology Products

Summary: In 2012, Strategic Communications was awarded contract number N65236-12-D-4133 supporting U.S. NAVY / Space and Naval Warfare (SPAWAR) Systems Center Atlantic (SSC-LANT) with Communication Technology Products. Strategic Communications has provided more than 241,000 products through this contract since 2012, representing more than 68,000 individual products per year and over $77,000,000 in products. This contract will continue until 2017, and has a value of $100,000,000.

Contract Value: $100,000,000

Scope of Contract: This Delivery Indefinite Quantity (IDIQ) contract provides SPAWAR with network and communications equipment, data center build out products, including rack enclosures, cooling equipment, patch panels and accessories, support, warranty, shipping and travel. The equipment requested on this contract is comprised of a mix of COTS, Ruggedized, Customized, or integrated equipment shipped within the Continental United States (CONUS) and Outside of the Continental United States (OCONUS). We have purchased equipment for this contract from OEMs such as TE Connectivity (cabinets, cable racks, patch panels and wire management), Panduit (racks, wire management, cable, connectors and grounding systems), APC (racks, cabinets, cooling and power systems), Middle Atlantic (cabinets, racks, power systems, fans and cooling) and Great Lakes (cabinets and cases). Strategic Communications has achieved a 100% success rate shipping product and services to meet the delivery dates indicated on SPAWAR Delivery Orders and Modifications.

Recency of Contract: Strategic Communications has worked on this contract within the last two (2) years, meeting the requirement for the NASPO Contract RFP.

Similarity to the NASPO Contract: This SPAWAR Contract supports an organization of the U.S. Navy, which is a Government organization. This Government support is similar to the NASPO Contract being intended to be available to all State Government and other Government and Educational entities. This SPAWAR Contract is also a large-value contract with various ordering offices using the contract to procure IT products and services, which is similar to the scope of the NASPO Contract.

D. USPTO AWS Cloud Products and Services

Summary: In 2012, Strategic Communications was awarded contract number DOC50PAPT1200075 supporting the U.S. Patent and Trademark Office (USPTO) with Technology Equipment, to include Cloud Services. This contract continued until June of 2015, and had a value of $50,000,000.

Contract Value: $50,000,000.00

Scope of Contract: Strategic Communications provides Automatic Data Processing (ADP) Components and Information Technology Products and Services, including cloud services, as part of this contract. Strategic Communications has been providing the USPTO with Amazon Web Services (AWS) on the U.S. GovCloud platform since 2012.

Recency of Contract: Strategic Communications has worked on this contract within the last two (2) years, meeting the requirement for the NASPO Contract RFP.

Similarity to the NASPO Contract: This USPTO contract supports a Government agency, similar to the NASPO Contract's intended client base. This USPTO Contract is also a large-value contract with various ordering offices using the contract to procure IT products and services, particularly cloud services, which is similar to the scope of the NASPO Contract.

E. Oakland County, Michigan, Cloud Services

Summary: Strategic Communications was awarded a contract to support Oakland County, Michigan, with Amazon Web Services (AWS) hosting and licenses.

Scope of Contract: Strategic Communications designed and implemented a custom environment within the AWS Cloud which allowed Oakland County to make modifications to their own environment. This capability was new for Oakland County. Strategic Communications seamlessly transitioned or obtained new AWS licensing for various products to keep Oakland County in compliance with requirements. We performed a full analysis of Oakland County's environment to ensure full understanding of the various AWS services they were using and how best to offer our guidance. In an effort to ensure Oakland County's environment was operating within industry best practice, Strategic Communications performed upgrades to infrastructure and migration of various instances to ensure they are position for future growth, security and disaster recovery/COOP.

Recency of Contract: Strategic Communications has worked on this contract within the last two (2) years, meeting the requirement for the NASPO Contract RFP.

Similarity to the NASPO Contract: This contract for Oakland County supports a County Government in Michigan, similar to the NASPO Contract's intended client base of State Governments. This contract is specific to cloud services, identical to the scope of the NASPO Contract.

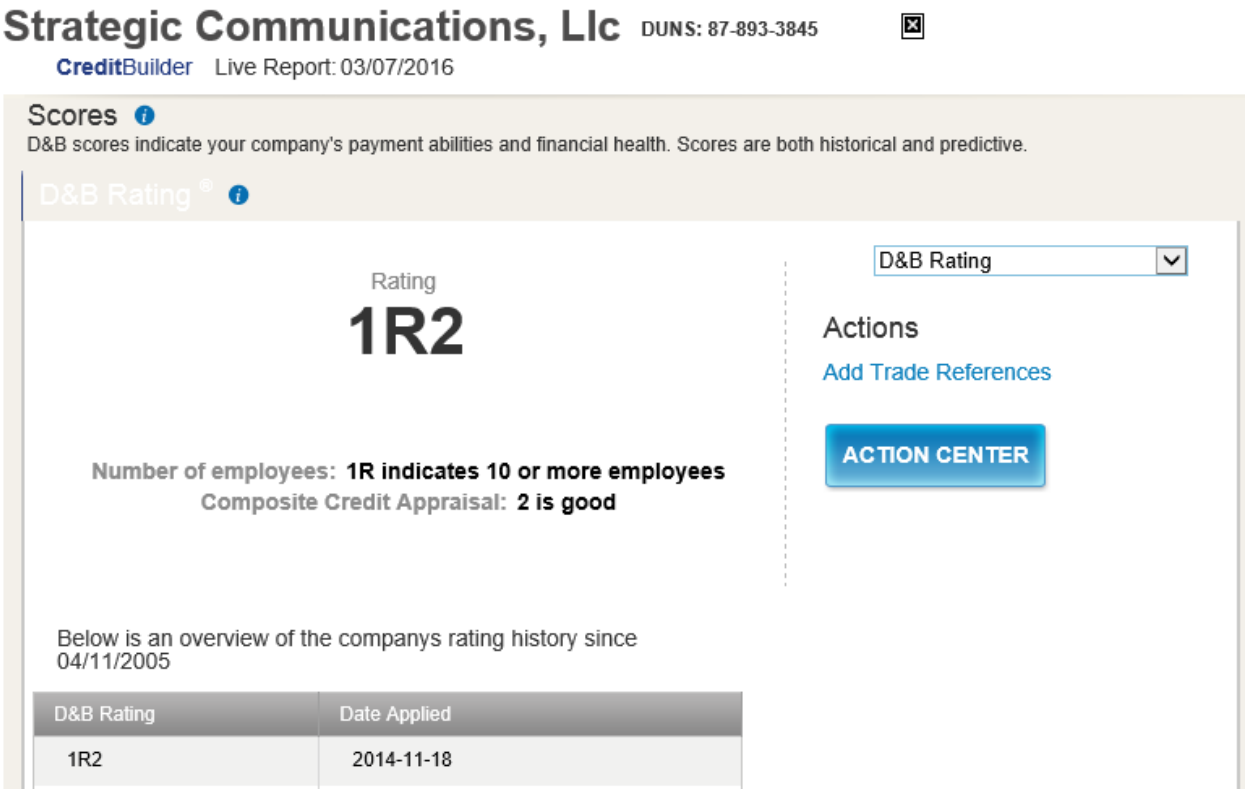
6.3 Financials

Strategic Communications meets the minimum Dun & Bradstreet (D&B) credit rating of 3A2 or better, as recognized by the equivalent industry rating. Strategic Communications does not submit financial information to Duns & Bradstreet and, as a result, Strategic Communications' credit rating size standard is based on the number of employees we have, as opposed to revenues. Therefore, we have provided documentation proving Strategic Communications exceeds the required credit rating of 3A2.

The required credit rating of 3A2 applies to a company with $1,000,000 - $9,999,999 in financial strength. The third numeral – "2" indicates a credit appraisal of "Good". Strategic Communications has a D&B credit rating of 1R2. The "1R" rating is indicative of a company with at least 10 employees. The "2" indicates a credit appraisal of "Good," as required by the RFP.

DUNS: 87-893-3845

Strategic Communications' D&B composite credit rating of 1R2 is shown below in the LiveReport module directly from Duns & Bradstreet.



Strategic Communications Communication has proven financial strength equivalent to the D&B 3A category. We have included the following documents to prove this level of financial strength:

- Attachment SC-7. 2013 Tax Filing (CONFIDENTIAL)
- Attachment SC-8. 2014 Tax Filing (CONFIDENTIAL)
- Attachment SC-9. Bank Letter from Old National Bank (CONFIDENTIAL)

As shown in Attachment SC-7, Strategic Communications' 2013 Tax Filing, our Gross Receipts for 2013 totaled $97,298,143. This amount of revenues far exceeds the D&B 3A category.

As shown in Attachment SC-8, Strategic Communications' 2014 Tax Filing, our Gross Receipts for 2013 totaled $56,585,251. This amount of revenues far exceeds the D&B 3A category.

Strategic Communications has also included a signed and dated latter from our personal banker at Old National Bank, labeled as Attachment SC-9. This letter, dated March 9, 2016, certifies that Strategic Communications has an average checking balance of over $2,000,000.00 at any given point in time. Our banker also certifies we have never experienced a Non-Sufficient Funds issue.

The combination of the above documentation proves that Strategic Communications **exceeds** the 3A2 credit rating and has a **proven financial strength** which **far exceeds** the requirements of the NASPO RFP.

6.4 General Information

A. 6.4.1 Pertinent General Information

Strategic Communications, LLC is a Women Owned Small Business (WOSB), MBE and WBE providing Managed Cloud Services for Government and Commercial entities. Today, Strategic Communications services local and state Governments providing managed Infrastructure as a Service (IaaS), Platform as a Service (PaaS) and Software as a Service (SaaS) solutions.

Strategic Communications leverages its 20 years of experience delivering IT and infrastructure solutions for the Government as the cornerstone of its managed services practice. Utilizing our experience with Amazon AWS, Microsoft Azure and VMWare to provide cloud infrastructure (private, public, hybrid), we augment customer capabilities with a range of managed services that include baseline / patch management, business continuity, incident management and network operations/monitoring.

Strategic Communications is an authorized government reseller and partner for many of the market leaders in cloud services and solutions for the Public Sector. Our partners have the largest cloud market share, are well known in the industry, and provide documented secure solutions. Strategic Communications leverages these relationships to offer our public sector clients with products in every service model and a variety of deployment models. We are able to offer these products at competitive prices, paired with our commitment to exceptional service.

An example of this depth and breadth is our Amazon Web Services (AWS) offering. AWS is the market leader and gold standard in public sector cloud solutions as demonstrated below.

Differentiation

AWS is differentiated in the market by many features and benefits.

- **Pace of Innovation:** AWS's pace of innovation is funded and sustained through our economies of scale and commitment to delivering the products and services that matter most to our customers. Our approach to product development and delivery is fundamentally different than that of other Cloud Service Providers (CSPs). We have decentralized, autonomous development teams that work directly with customers. They are empowered to autonomously develop and launch new features based on what they learn from interactions with both commercial and public sector customers. AWS's continual innovation ensures that customers maintain state-of-the-art IT infrastructure without having to make recapitalization investments. As of January 1, 2016, AWS has launched a total of 1,896 new services or major features since inception in 2006 (including 516 in 2014 and 722 in 2015). According to the Gartner, Inc. 2015 Magic Quadrant for Cloud Infrastructure as a Service (IaaS), Worldwide, "AWS is a thought leader; it is extraordinarily innovative, exceptionally agile, and very responsive to the market."

- **Service Breadth and Depth:** AWS offers the broadest set of global compute, storage, networking, database, analytics, application, deployment, management, and mobile services that help organizations move faster, lower IT costs, and scale applications. AWS has been continually expanding its services to support virtually any cloud workload, and it now has more than 50 services that serve over one million active customers in more than 190 countries through our 12 regions, 32 Availability Zones, and 54 Edge Locations. Gartner Inc. reported in its 2015 Magic Quadrant for Cloud Infrastructure as a Service (IaaS), Worldwide report that AWS "has the richest array of IaaS features," "continues to rapidly expand its service offerings and offer higher-level solutions," and has "over 10 times more cloud IaaS compute capacity in use than the aggregate total of the other 14 providers in this Magic Quadrant."

- **Partner and Software Ecosystem:** According to the Gartner, Inc. 2015 Magic Quadrant for Cloud Infrastructure as a Service (IaaS), Worldwide report, AWS has attracted "a very large technology partner ecosystem that includes software vendors that have licensed and packaged their software to run on AWS, as well as many vendors that have integrated their software with AWS capabilities. It also has an extensive network of partners that provide application development expertise, managed services, and professional services such as data center migration." AWS has thousands of organizations in the AWS Partner Network (APN) including system integrators, consulting firms, and independent software vendors (ISVs). AWS Marketplace, an online software store, helps customers search over 2,300 listings to buy and immediately start using software that runs on AWS.

- **AWS Cloud Security Authorizations and Experience:** AWS offers customers a powerful cloud security capability based on cutting-edge security experience and backed by an extensive repertoire of accreditations and authorizations. In The Forrester Wave™: Public Cloud Platform Service Providers' Security, Q4 2014 report, Forrester Research named AWS as the only provider in the Leader category. Forrester stated, "AWS leads the

pack. AWS demonstrated not only a broad set of security capabilities in data center security, certifications, and network security, but also excelled in customer satisfaction, security services partnerships, and a large installed base." AWS has achieved two Provisional Authorizations to Operate (P-ATOs) for mission systems designated by DISA as Cloud Computing Security Requirements Guide (SRG) level 2 (covering all AWS regions in the contiguous United States [CONUS]) and SRG level 4 (covering only the AWS GovCloud (US) Region).

- **AWS Pricing:** As AWS's cloud computing infrastructure grows, it gains efficiency and economies of scale, which we pass on to our customers in the form of lower prices. The Gartner, Inc. 2015 Magic Quadrant for Cloud Infrastructure as a Service (IaaS), Worldwide report states that AWS has "over 10 times more cloud IaaS compute capacity in use than the aggregate total of the other 14 providers," demonstrating how AWS's massive economies of scale make it possible to lead the cloud market in lowering prices. The AWS strategy of pricing each service independently gives customers tremendous flexibility to choose the services they need for each project and to pay only for resources used. The economies of scale available with the cloud, and the massive scale at which we operate, allows AWS to constantly purchase and refresh large volumes of infrastructure at very low cost. Consequently, AWS customers reap the benefits of decreased IT costs such as better performance through improved quality and availability of IT infrastructure and enhanced functionality through system-wide innovation in the AWS IaaS platform.

Business Benefits of AWS Cloud Services

There are additional business benefits that AWS cloud services can help customers realize. A few of these are listed here:

- **Almost Zero Upfront Infrastructure Investment:** If a customer wants to build a large-scale system, it may cost a fortune to invest in real estate, physical security, hardware (racks, servers, routers, backup power supplies), hardware management (power management, cooling), and operations personnel. Because of the high upfront costs, the project would typically require several rounds of management approvals before the project could even get started. With AWS's utility-style cloud computing, there is no fixed cost or startup cost.

- **Just-In-Time Infrastructure:** In the past, if an application became popular and a business' systems or infrastructure did not scale, it became a victim of its own success. Conversely, if a developer invested heavily and did not get popular, it became a victim of failure. By deploying applications in the AWS cloud with just-in-time self-provisioning, customers do not have to worry about pre-procuring capacity for large-scale systems. AWS's cloud increases agility, lowers risk, and lowers operational cost, because customers can scale cloud resources as they grow and only pay for what they use.

- **More Efficient Resource Utilization:** System administrators usually worry about procuring hardware (when they run out of capacity) and higher infrastructure utilization (when they have excess and idle capacity). With AWS, they can manage resources more

effectively and efficiently by having the applications request and relinquish resources on-demand.

- **Usage-Based Costing:** With utility-style pricing, AWS customers are billed only for the infrastructure that has been used. AWS customers do not pay for allocated but unused infrastructure. This adds a new dimension to cost savings, allowing customers to see immediate cost savings when they deploy an optimization patch to update their cloud application. For example, if a caching layer can reduce data requests by 70%, the savings begin to accrue immediately. Moreover, if customers build platforms on the cloud, they can pass on the same flexible, variable usage-based cost structure to their own customers.

- **Reduced Time to Market:** Parallelization is the one of the great ways to speed up processing. If one compute-intensive or data-intensive job that can be run in parallel takes 500 hours to process on one machine, with cloud architectures, it would be possible to spawn and launch 500 instances and process the same job in 1 hour. Having available an elastic infrastructure provides the application with the ability to exploit parallelization in a cost-effective manner reducing time to market.

Technical Benefits of AWS Cloud Services

Some of the key technical benefits of the AWS cloud are:

- **Automation – "Scriptable Infrastructure":** AWS customers can create repeatable build and deployment systems by leveraging programmable (API-driven) infrastructure.

- **Auto Scaling:** AWS customers can scale their applications up and down to match unexpected demand without any human intervention. Auto Scaling encourages automation and drives more efficiency.

- **Proactive Scaling:** Customers can scale applications up and down to meet anticipated demand with proper planning of traffic patterns so that costs remain low while scaling.

- **More Efficient Development Lifecycle:** Production systems may be easily cloned for use as development and test environments. Staging environments may be easily promoted to production.

- **Improved Testability:** Never run out of hardware for testing. Inject and automate testing at every stage during the development process. AWS customers can spin up an "instant test lab" with pre-configured environments only for the duration of testing phase.

- **Disaster Recovery and Business Continuity:** The cloud provides a lower cost option for maintaining a fleet of disaster recovery servers and data storage. With the cloud, customers can take advantage of geo-distribution and replicate the environment in other locations within minutes.

- **Overflow Traffic to the Cloud:** With a few clicks and effective load balancing tactics, customers can create a complete overflow-proof application by routing excess traffic to the cloud.

Analyst Reports

Gartner, Inc., a leading information technology research company, reported in its 2015 Magic Quadrant for Cloud Infrastructure as a Service (IaaS), Worldwide report that "AWS is a thought leader; it is extraordinarily innovative, exceptionally agile, and very responsive to the market. It has the richest array of IaaS features and PaaS-like capabilities. It continues to rapidly expand its service offerings and offer higher-level solutions." The Gartner Magic Quadrant for May 2015 (Figure 4) depicts AWS in the Leaders Quadrant.

Figure 1 – 2015 Gartner Magic Quadrant for Cloud Infrastructure as a Service

Additionally, Gartner positions AWS in the Leaders Quadrant of the new Magic Quadrant for Public Cloud Storage Services (Figure 2). Gartner defines leaders as offering innovative storage offerings built on a hardened platform, with global data centers and established credibility as a business.

Figure 2 – 2015 Gartner Magic Quadrant for Public Cloud Storage Services

The Forrester Wave: Public Cloud Platform Service Providers' Security, Q4 2014 report (Figure 3) evaluated four of the leading public clouds along 15 key security criteria, detailing the findings about how well each vendor fulfilled their criteria and where they stand in relation to each other. Forrester's evaluation states "AWS leads the pack. AWS demonstrated not only a broad set of security capabilities in data center security, certifications, and network security, but also excelled in customer satisfaction, security services partnerships, and a large installed base. AWS led with the size of its development and technical support staff as well."

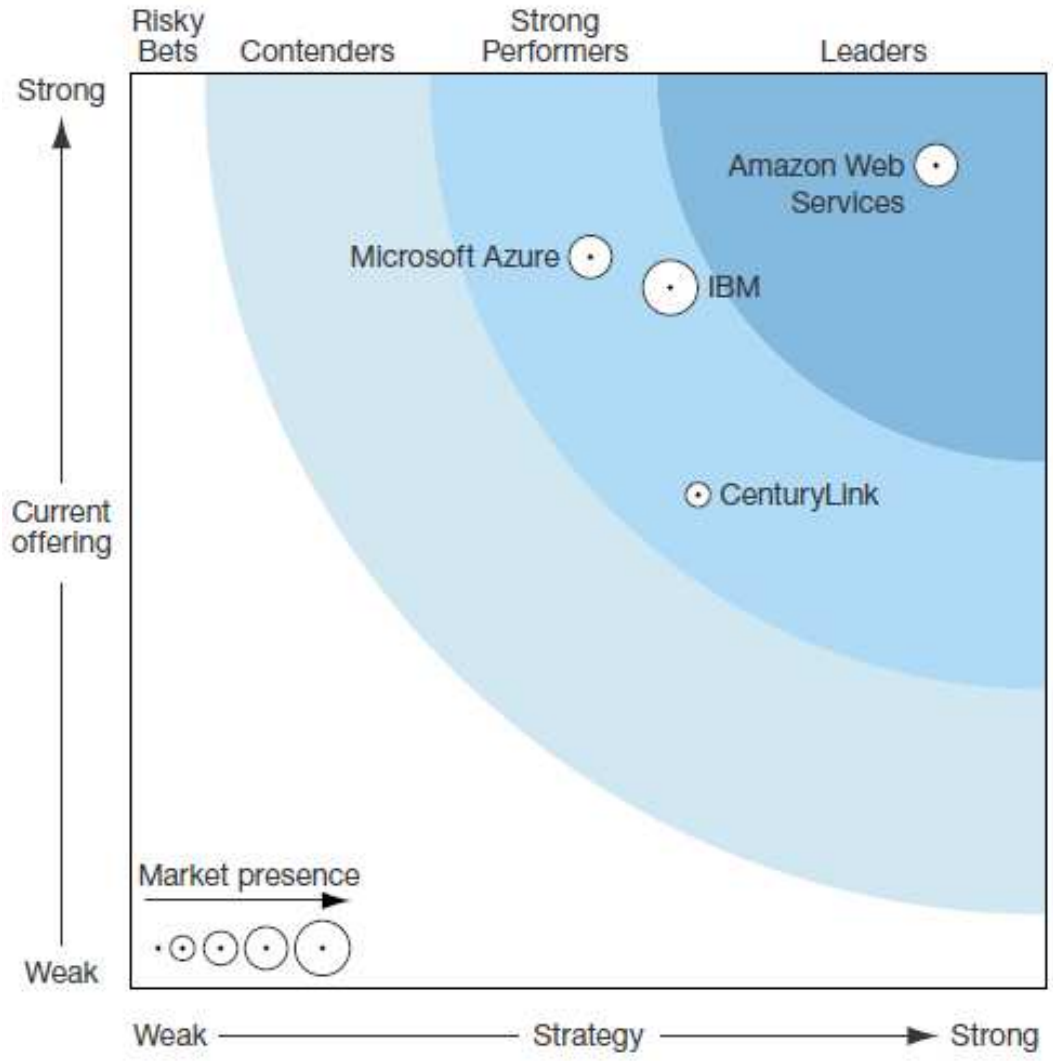


Figure 3 – Forrester Wave™: Public Cloud Service Providers' Security, Q4 '14

More analyst reports can be found at http://aws.amazon.com/resources/analyst-reports/.

B. 6.4.2 Auditing Capabilities

Strategic Communications' IaaS, PaaS and SaaS offerings have been designed to **exceed SAS 70 auditing and management standards** through alignment with the following regulations, standards, and best practices:

- Federal Risk and Authorization Management Program (FedRAMP)
- Service Organization Controls (SOC) 1/American Institute of Certified Public Accountants (AICPA): AT 801 (formerly Statement on Standards for Attestation Engagements [SSAE] No. 16)/International Standard on Assurance Engagements (ISAE) 3402 (formerly Statement on Auditing Standards [SAS] No. 70)
- SOC 2
- SOC 3
- Payment Card Industry Data Security Standard (PCI DSS)
- International Organization for Standardization (ISO) 27001
- ISO 27017
- ISO 27018
- ISO 9001
- Department of Defense (DoD) Security Requirements Guide (SRG) security impact levels 2 and 4
- Federal Information Security Management Act (FISMA)
- US Health Insurance Portability and Accountability Act (HIPAA)
- FBI Criminal Justice Information Services (CJIS)
- National Institute of Standards and Technology (NIST) 800-171
- International Traffic in Arms Regulations (ITAR)
- Federal Information Processing Standard (FIPS) 140-2
- Family Educational Rights and Privacy Act (FERPA)
- Information Security Registered Assessors Program (IRAP) (Australia)
- IT-Grundschutz (Germany)

6.5 Billing and Pricing Practices

A. 6.5.1 Billing and Pricing Practices: Transparency and Ease of Understanding

Strategic Communications' experience as a cloud integrator allows us to support multiple billing options for all of our cloud services offerings including IaaS, PaaS, and SaaS. Our billing practices are completely transparent and for many of our key vendors like Amazon Web Services (AWS), we give our customers access to a web-based portal that allows them to track utilization in real-time. The cloud offerings that Strategic Communications supports have a variety of billing per unit options including per hour, per month, per year, per license, per user. Strategic Communications also offers different contract terms including pay-as-you-go, project based, monthly, 1 Year, 2 Year, 3 Year, 4 Year, and 5 Year.

With differing billing options for each cloud vendor, Strategic Communications makes it simple by listing out each service so the Purchasing Entity knows exactly where the costs are coming

from for each cloud offering consumed. Strategic Communications ability to combine or separate all monthly cloud service usage from multiple vendors on one bill is a great value-add for Purchasing Entities. Strategic Communications simple and secure consolidated billing option will allow Purchasing Entities to save time on managing multiple bills from various cloud providers to only one through Strategic Communications. In some rare instances, a select company in our cloud integrator ecosystem may not be able to accommodate all billing types. When value-added services are being performed, Strategic Communications has a service ticket and time tracking application that can show an end-user when and what was accomplished on their projects.

Strategic Communications currently supports many different Purchasing Entity's billing systems and our familiarity with these systems will allow for a smooth vendor onboarding when a purchase order is awarded. Strategic Communications is committed to providing Purchasing Entities with the most flexible marketplace that promotes billing transparency through the use of web-based tools available for the end-user's 24x7 access. Strategic Communications has a strong relationship with AWS and many of the cloud solutions that we deploy including IaaS, PaaS, and SaaS are based on their market leading architecture. The utility-style pricing model that we use is modeled after AWS's philosophy that the Purchasing Entity should only pay for the resources consumed. This model allows Strategic Communications to continually offer the most aggressive pricing to our customers. As the cost of the resource per hour decreases, the price to the purchasing entity decreases as well. In 2014, AWS reduced the cost of compute by an average of 30%, storage by an average of 51%, relational databases by an average of 28%, and continue to drive down the cost of customer IT infrastructure.

Below is a list of benefits that are available to Purchasing Entities through Strategic Communications' fulfillment partnership with AWS.

- **Pay as You Go:** No minimum commitment or long-term contract is required. Customers can turn off cloud resources and stop paying for them when they are not needed, maximizing Return on Investment (ROI) through full utilization.

- **Pay Less When You Reserve:** For certain AWS products, customers can invest in reserved capacity, paying a low up-front fee to receive a significant discount. This results in overall savings of up to 60% (depending on the type of instance reserved) over equivalent on-demand capacity.

- **Pay Even Less Per Unit by Using More:** AWS pricing is tiered for storage and data transfer, so the more customers use, the less they pay per gigabyte.

- **Pay Even Less as AWS Grows:** We continually focus on reducing our data center hardware costs, improving our operational efficiencies, lowering our power consumption, and passing savings back to customers. AWS has a history of continually lowering prices and has reduced prices 51 times since AWS launched in 2006.

- **Transparency:** AWS provides transparent, publicly available, and up-to-date pricing, and tools that allow customers to evaluate AWS pricing against other Cloud Service Providers

(CSPs). AWS's Simple Monthly Calculator can be found at http://calculator.s3.amazonaws.com/index.html.

- **Governance:** AWS provides tools to generate detailed and customizable billing reports to meet customer business and compliance needs.

Strategic Communications is well versed in working with government purchasing entities on various billing practices and our internal systems are already prepared to support the requirements of this contract. Our pricing practices are very transparent as we always publish a catalog list price to the public when allowed and many of our fulfillment OEM partners have these list price documents uploaded on their websites for viewing. Overall, Strategic Communications' position as a cloud integrator provides us with an advantage in our billing and pricing practices because we can make decisions faster, implement change more rapidly, escalate and resolve issues quicker while providing a greater level of customer service through less complexity.

B. 6.5.2 Cost Impacts for Consideration

There are additional business benefits that Strategic Communications cloud services can help customers realize when deploying our IaaS, PaaS, and SaaS solutions. A few of these benefits are listed below.

- **Almost Zero Upfront Infrastructure Investment:** If a customer wants to build a large-scale system, it may cost a fortune to invest in real estate, physical security, hardware (racks, servers, routers, backup power supplies), hardware management (power management, cooling), and operations personnel. Because of the high upfront costs, the project would typically require several rounds of management approvals before the project could even get started. With Strategic Communications' utility-style cloud computing, there is no fixed cost or startup cost.

- **Just-In-Time Infrastructure:** In the past, if an application became popular and a business' systems or infrastructure did not scale, it became a victim of its own success. Conversely, if a developer invested heavily and did not gain popularity, it became a victim of failure. By deploying applications in the Strategic Communications cloud with just-in-time self-provisioning, customers do not have to worry about pre-procuring capacity for large-scale systems. Strategic Communications' cloud increases agility, lowers risk, and lowers operational cost, because customers can scale cloud resources as they grow and only pay for what they use.

- **More Efficient Resource Utilization:** System administrators usually worry about procuring hardware (when they run out of capacity) and higher infrastructure utilization (when they have excess and idle capacity). With Strategic Communications, they can manage resources more effectively and efficiently by having the applications request and relinquish resources on-demand.

- **Usage-Based Costing:** With utility-style pricing, Strategic Communications' customers are billed only for the infrastructure that has been used. Strategic Communications' customers do not pay for allocated but unused infrastructure. This adds a new dimension to cost savings, allowing customers to see immediate cost savings when they deploy an optimization patch to update their cloud application. For example, if a caching layer can reduce data requests by 70%, the savings begin to accrue immediately. Moreover, if customers build platforms on the cloud, they can pass on the same flexible, variable usage-based cost structure to their own customers.

- **Reduced Time to Market:** Parallelization is the one of the great ways to speed up processing. If one compute-intensive or data-intensive job that can be run in parallel takes 500 hours to process on one machine, with cloud architectures, it would be possible to spawn and launch 500 instances and process the same job in 1 hour. Having available an elastic infrastructure provides the application with the ability to exploit parallelization in a cost-effective manner reducing time to

In addition to the cost and business benefits that are achieved through the adoption of Strategic Communications' cloud services, Strategic Communications provides tools that can help purchasing entities quantify the cost impact.

Our key IaaS fulfillment partner, AWS offers a Total Cost of Ownership (TCO) Calculator which allows organizations to compare AWS to the cost of running applications in an on-premises or traditional hosting environment. Our analysis shows that AWS offers significant cost savings (up to 80%) compared to equivalent on-premises deployments.

AWS is a highly cost-effective alternative to on-premises infrastructure solutions, delivering significantly reduced IT system and management costs. In 2015, AWS commissioned the International Data Corporation (IDC) to interview 11 organizations that deployed applications on AWS. IDC set out to understand the long-term economic implications of moving workloads onto Amazon cloud infrastructure services, the impact of moving applications on developer productivity and business agility, and the new opportunities that businesses could address by moving resources onto AWS.

IDC discovered that developing, deploying, and managing critical applications in A0WS delivered a five-year TCO savings of 64.3% when compared with deploying the same resources on-premises or in hosted environments. The findings also showed a 560% ROI over five years.

AWS Pricing: As AWS's cloud computing infrastructure grows, it gains efficiency and economies of scale, which we pass on to our customers in the form of lower prices. The Gartner, Inc. 2015 Magic Quadrant for Cloud Infrastructure as a Service (IaaS), Worldwide report states that AWS has "over 10 times more cloud IaaS compute capacity in use than the aggregate total of the other 14 providers," demonstrating how AWS's massive economies of scale make it possible to lead the cloud market in lowering prices. The AWS strategy of pricing each service independently gives customers tremendous flexibility to choose the services they need for each project and to pay only for resources used. The economies of scale available with the cloud, and the massive scale at which we operate, allows AWS to constantly purchase and refresh large volumes of infrastructure at very low cost. Consequently, AWS customers reap the benefits of decreased IT costs such as better performance through improved quality and availability of IT infrastructure and enhanced functionality through system-wide innovation in the AWS IaaS platform.

Potential Business Value of Running Applications on AWS

- Five year ROI: 560%
- Payback period: 5.5 months
- $1.54M average five-year discounted business benefits per application
- 64.3% lower TCO
- 68.1% more efficient IT staff operations
- $76,800 additional revenue per year per application
- 118.4% more applications delivered
- 81.7% less downtime

C. 6.5.3 NIST Compliance

Strategic Communications' IaaS, PaaS and SaaS offerings meet NIST compliance and is proven based on extensive audits by independent third-party assessors. These audits confirm our solutions can meet new requirements, even as they are issued, and this is the case for the National Institute of Standards and Technology (NIST) guidelines 800-171, which were released in June 2015. This guidance is applicable to the protection of Controlled Unclassified Information (CUI) on nonfederal systems.

Strategic Communications' offerings exceed this requirement through continual security improvement and compliance with current and future requirements, such as NIST 800-171. Our solutions are already compliant with these guidelines, and customers can effectively comply with NIST 800-171 immediately. NIST 800-171 outlines a subset of the NIST 800-53 requirements, a guideline under which have already been audited under our provider's FedRAMP program. The FedRAMP Moderate security control baseline is more rigorous than the recommended requirements established in Chapter 3 of 800-171 and includes a significant number of security controls above and beyond those required of FISMA Moderate systems that protect CUI data. A detailed mapping is available in the NIST Special Publication 800-171, starting on page D2 (which is page 37 in the PDF).

Strategic Communications' industry-leading security strength benefits Purchasing Entities in many ways, one of which is by using a platform that is audited extensively by independent third-party assessors. At times, these audits confirm we can meet new requirements, even as they are issued, and this is the case for the National Institute of Standards and Technology (NIST) guidelines 800-171, which were released in June 2015. This guidance is applicable to the protection of Controlled Unclassified Information (CUI) on nonfederal systems.

Strategic Communications' Cloud Solutions including IaaS, PaaS, and SaaS are already compliant with these guidelines in most cases, and customers can effectively comply with NIST 800-171 immediately. NIST 800-171 outlines a subset of the NIST 800-53 requirements, a guideline which we have already been audited under our FedRAMP program. The FedRAMP Moderate security control baseline is more rigorous than the recommended requirements established in Chapter 3 of 800-171 and includes a significant number of security controls above and beyond those required of FISMA Moderate systems that protect CUI data. A detailed mapping is available in the NIST Special Publication 800-171, starting on page D2 (which is page 37 in the PDF).

6.6 Scope and Variety of Cloud Solutions

Strategic Communications offers a large portfolio of cloud solutions available in the IaaS, PaaS and SaaS Service models that provide everything from unmanaged servers, storage and virtual cloud networking to managed servers, email and virtual desktops.

A complete listing of our solutions with descriptions has been provided in **Attachment SC-6**.

6.7 Best Practices

Strategic Communications' IaaS, PaaS and SaaS offerings have been designed to provide optimum availability while ensuring complete customer privacy and segregation. Our provider's highly secure data centers use state-of-the-art electronic surveillance and multi-factor access control systems and maintain strict, least-privileged-based access authorizations. Their environmental systems are designed to minimize the impact of disruptions to operations, and our multiple geographic regions and Availability Zones allow customers to remain resilient in the face of most failure modes, including natural disasters or system failures. For example, our AWS offering manages over 1,800 security controls to provide an optimally secure environment for all of our customers.

In addition, network traffic between regions, Availability Zones, and individual data centers travels over private network segments by default. These private network segments are fully isolated from the public Internet and not routable externally. Resources can be configured to reside only on isolated network segments and to avoid utilizing any public IP addresses or routing over the public Internet.

Strategic Communications leverages the security engineers and solution architects of our providers who have developed whitepapers and operational checklists to help customers select the best options for their needs and to recommend security best practices, such as storing secret keys and passwords in a secure manner and rotating or changing them frequently.

Built-In Security Features

Not only are applications and data protected by highly secure facilities and infrastructure, they are also protected by extensive network and security monitoring systems. For example, through our AWS offering, over 700 tools and features are available to help customers meet their security objectives concerning visibility, auditability, controllability, and agility. These tools and features provide basic but important security measures such as Distributed Denial of Service (DDoS) protection and password brute-force detection on accounts.

Examples of our security features provided by our primary offering through AWS include:

- **Secure Access** – Customer access points, also called Application Programming Interface (API) endpoints, allow secure HTTP access (HTTPS) so that customers can establish secure communication sessions with their cloud services using Secure Socket Layer (SSL)/Transport Layer Security (TSL).

- **Built-In Firewalls** – Customers can control how accessible their instances are by configuring built-in firewall rules—from totally public to completely private or somewhere in between. And when instances reside within an Amazon Virtual Private Cloud (Amazon VPC) subnet, customers can control egress as well as ingress.

- **Unique Users** – The AWS Identity and Access Management (IAM) tool allows AWS customers to control the level of access their own users have to AWS infrastructure

services. With AWS IAM, each user can have unique security credentials, eliminating the need for shared passwords or keys and allowing the security best practices of role separation and least privilege.

- **Multi-Factor Authentication (MFA)** – AWS provides built-in support for MFA for use with AWS accounts as well as individual AWS IAM user accounts.

- **Private Subnets** – The Amazon VPC service allows customers to add another layer of network security to instances by creating private subnets and even adding an Internet Protocol Security (IPsec) Virtual Private Network (VPN) tunnel between a home network and Amazon VPC.

- **Encrypted Data Storage** – Customers can have the data and objects they store in Amazon Elastic Block Store (Amazon EBS), Amazon Simple Storage Service (Amazon S3), Amazon Glacier, Amazon Redshift, and Amazon Relational Database Service (Amazon RDS) on Oracle and SQL Server encrypted automatically using Advanced Encryption Standard (AES) 256, a secure symmetric-key encryption standard using 256-bit encryption keys.

- **Dedicated Connection Option** – The AWS Direct Connect service allows customers to establish a dedicated network connection from their premises to AWS. Using industry-standard 802.1q VLANs, this dedicated connection can be partitioned into multiple logical connections to enable access to both public and private IP environments within the AWS cloud.

- **Isolated GovCloud** – For customers who require additional measures in order to comply with US International Traffic in Arms Regulations (ITAR), AWS offers an entirely separate region called AWS GovCloud (US). This isolated region provides an environment where customers can run ITAR-compliant applications and provides special endpoints that utilize only Federal Information Processing Standard (FIPS) 140-2 encryption.

- **Dedicated, Hardware-Based Crypto Key Storage Option** – For customers who must use Hardware Security Module (HSM) appliances for cryptographic key storage, AWS CloudHSM provides a highly secure and convenient way to store and manage keys.

- **Centralized Key Management** – For customers who use encryption extensively and require strict control of their keys, the AWS Key Management Service (KMS) provides a convenient management option for creating and administering the keys used to encrypt data at rest.

- **Perfect Forward Secrecy** – For even greater communication privacy, several AWS cloud services such as Elastic Load Balancing and Amazon CloudFront offer newer, stronger cipher suites. These cipher suites allow SSL/TLS clients to use Perfect Forward Secrecy, a technique that uses session keys that are ephemeral and not stored anywhere. This

prevents the decoding of captured data, even if the secret long-term key itself is compromised.

Strategic Communications' cloud offering further meets the requirement through several built-in cloud security features that focus on providing visibility into data, performance, and resource usage. The tools listed below help customers gain more insight into their cloud operations, giving them the means to better control their security and providing information for data-driven decisions.

- **AWS Trusted Advisor** – Provided automatically when AWS customers sign up for premium support, the AWS Trusted Advisor service is a convenient way for customers to see where they could use a little more security. It monitors AWS resources and alerts customers to security configuration gaps such as overly permissive access to certain Amazon Elastic Compute Cloud (Amazon EC2) instance ports and Amazon S3 storage buckets, minimal use of role segregation using AWS IAM, and weak password policies.

- **Amazon CloudWatch** – Amazon CloudWatch enables customers to collect and track metrics, collect and monitor log files, and set alarms. Amazon CloudWatch can monitor AWS resources such as Amazon EC2 instances, Amazon DynamoDB tables, and Amazon RDS DB instances, as well as custom metrics generated by a customer's applications and services and any log files their applications generate. Customers can use Amazon CloudWatch to gain system-wide visibility into resource utilization, application performance, and operational health, using these insights to react intelligently and keep applications running smoothly.

- **AWS CloudTrail** – AWS CloudTrail provides logs of all user activity within an AWS account. The recorded information includes the identity of the API caller, the time of the API call, the source IP address of the API caller, the request parameters, and the response elements returned by the AWS cloud service. The AWS API call history produced by AWS CloudTrail enables security analysis, resource change tracking, and compliance auditing.

- **AWS Config** – With the AWS Config service, customers can immediately discover all of their AWS resources and view the configuration of each. Customers can receive notifications each time a configuration changes as well as dig into the configuration history to perform incident analysis.

More information on these and other features is available at http://aws.amazon.com/security/aws-security-features/.

Third-Party Security Tools

Strategic Communications' cloud offering exceeds the requirement by offering not only the baseline tools described above, but also additional third-party security tools for on-demand purchase to complement and enhance our customers' operations in the cloud. These tools are available through our AWS offering and customers can browse and purchase partner products on the AWS Marketplace. These products complement existing AWS cloud services to enable customers to deploy a comprehensive security architecture and a more seamless experience across their cloud and on-premises environments. The APN partner security products cover multiple areas of security, including application security, policy management, identity management, security monitoring, vulnerability management, and endpoint protection. Figure 1 is a snapshot of the APN partners and categories of products available under the security category in the AWS Marketplace.

Figure 1 – The AWS Marketplace provides access to many familiar and trusted security vendors.

Several of the security products that AWS offers are provided only by APN partners that are prequalified by the APN Partner Competency Program, which confirms their technical proficiency and proven customer success in specialized solution areas. AWS's Security Competency Partners can also provide demos and consulting services that are not always available through the AWS Marketplace.

Organization and Staffing

7.1 Contract Manager

A. 7.1.1 Contract Manager

Strategic Communications is proposing **Bobby Nakanelua** as our Contract Manager for management of the NASPO ValuePoint Master Agreement. Bobby is based on our Corporate Headquarters in Louisville, Kentucky and can be reached at (502) 813-8045 or bnakanelua@yourstrategic.com. Mr. Nakanelua is available directly from 8:00 AM – 5:00 PM EST and is supplemented by our 24/7 Help Desk Support Staff.

B. 7.1.2 Experience of Contract Manager

Our proposed Contract Manager, Bobby Nakanelua, is a Senior Cloud Architect with specialized expertise in Cloud Solutions. Mr. Nakanelua is also a certified Project Management Professional (PMP). We feel Mr. Nakanelua's expertise in the cloud sector makes him an especially valuable Contract Manager for the NASPO ValuePoint Contract.

Mr. Nakanelua has managed multiple contracts for Cloud Solutions, providing both engineering and architectural technical expertise and proven, certified management expertise.

- Mr. Nakanelua is ITIL v3 certified and has managed large scale IT data center modernization efforts for Federal agencies with mature ITIL processes.
- Mr. Nakanelua was the Lead Enterprise Architect and Service Delivery Manager supporting the IT strategy and operations of the US Army Human Resource Command. In that role he was responsible for developing the IT strategy of the Division that supported multiple Army data centers, over 180+ applications and approximately 100MM in infrastructure. In addition, Mr. Nakanelua was a key member of an operation's branch, which oversaw the implementation of ISO 9001:2008, the enforcement of operational processes and the creation of IT Command policy.
- As the Lead Enterprise Architect for the Technology Division of the US Army Human Resource Command, Mr. Nakanelua was responsible for working closely with personnel across the enterprise to design, develop and implement IT solutions in a mature ITIL and CMMI enterprise.
- Mr. Nakanelua has firsthand experience implementing asset and configuration management tools with supporting processes to discover, manage and report in large and complex IT environments.
- Mr. Nakanelua oversaw the contract team for the Enterprise Management Systems team, which was responsible for a portfolio of applications that provided asset management, configuration management, monitoring, management and reporting of over 7,000 data center and 19,000 field assets across 2600 locations worldwide.
- Mr. Nakanelua has past experience working with multiple service desks for the US Army, the Defense Manpower Data Center and the General Services Administration providing Incident/Problem Management systems, implementing supporting processes and procedures both during instantiation and sustainment.

- As a Service Delivery Manager for an Army Data Center hosting multiple Government tenants, Mr. Nakanelua provided direct service level management support to customers. He oversaw the hosted customer IT support staff and served a critical role during the on-boarding, cost development, site survey and operations and maintenance (O&M) phases. Mr. Nakanelua has direct experience defining new operational procedures for hosted environments and developing Service Level Agreements.
- For the past 6 years, Mr. Nakanelua has successfully worked with multiple Federal agencies to develop technical strategies and architectures for the US Army, Defense Manpower Data Center (DCMC) and the General Services Administration.
- In his most recent assignment, Mr. Nakanelua worked with the US Army Human Resources Command (HRC) to define the technical strategy for creating private cloud services and planning the migration of DoD enterprise applications to DoD Cloud Services. HRC was at the forefront of emerging technologies, implementing virtualization, cloud, IP telephony and the latest in converged hardware systems.
- Mr. Nakanelua has years of experience developing secure IT solutions inclusive of physical, infrastructure, operational and application security. He has prior experience managing network and application firewalls and intrusion and prevention detection systems (IDS/IPS).
- Mr. Nakanelua's background in large enterprise environments has provided experience leading team to design, implement and maintain IT solutions with complex Defense in Depth strategies incorporating firewalls, authentication, identity and access management and IDS/IPS.
- Mr. Nakanelua has prior experience as an Enterprise Architect and Service Delivery manager of the US Army HRC Data Center Management Branch, responsible for the design and maintenance of access cabling, power, grounding, heating, ventilation, air conditioning, raised flooring, load bearing, fire suppression and physical security for multiple data centers. This experience was crucial for designing IT solutions that met applicable local codes, industry and Agency standards.
- Mr. Nakanelua has operated in world class Federal data centers that utilize the latest in energy efficiency design certified to LEEDS Silver and Gold Standards.
- Mr. Nakanelua has served as key personnel for Disaster Recovery & COOP, designing COOP architecture (at the data center, infrastructure and application layers), defining COOP procedures, documentation and personally leading the restoration of service during multiple COOP events for Federal agencies.
- Mr. Nakanelua has years of experience engineering secure IT solutions for multiple Federal agencies including the US Army, Defense Manpower Data Center (DCMC) and the General Services Administration (GSA).
- In his roles as Enterprise and Systems architect supporting the US Army and the General Services Administration, Mr. Nakanelua has experience designing and implementing the latest in core technologies to support data center and application modernization efforts.
- Mr. Nakanelua has experience as a solution provider creating integrations between software applications and communication devices in support of contact center operations and Network Operation Center communications.

- In his former role, Mr. Nakanelua was chief architect, responsible for the design and strategy of a converged IT infrastructure that would provide secure, cost effective computing for Federal agencies in support of private and DoD cloud hosting efforts.
- Mr. Nakanelua has over 15 years of development experience that include design and development of cross channel IT applications for both public and private sector clients.
- Mr. Nakanelua currently holds an active DoD security clearance and maintains DoD 8570 IAT II qualifications.
- Mr. Nakanelua has supported multiple Agent of Certification Authority (ACA) and DISA Command and Cyber Readiness Inspections (CCRI).
- Mr. Nakanelua incorporates Agency information assurance and compliance requirements in all IT solutions.
- Mr. Nakanelua was co-founder of a media company that specialized in mobile solutions. In addition, Mr. Nakanelua has over 15 years of development experience that include design and development of mobile IT applications for both public and private sector clients.

Our proposed Contract Manager's resume has been included as **Attachment SC-15**.

C. 7.1.3 Roles and Responsibilities of Contract Manager

Mr. Nakanelua will manage the contract, ensuring Strategic Communications' standards are met for customer service. Mr. Nakanelua will monitor quality, manage reporting, respond to Purchasing Entity inquiries, monitor service desk performance metrics, implement improvements, and modify processes as needed. Mr. Nakanelua will act as Strategic Communications' main point of contact for the NASPO Contract and will represent Strategic Communications to receive legal notices and negotiate any Contract issues. Mr. Nakanelua will serve as the primary contact for resolution of any billing or delivery issues.

Technical Requirements

8.1 Technical Requirements

A. 8.1.1 Identification of Cloud Service Models and Deployment Models

Strategic Communications is offering a large portfolio of cloud solutions available in the IaaS, PaaS and SaaS Service models utilizing Public, Community and Hybrid Deployment models that provide everything from unmanaged servers, storage and virtual cloud networking to managed servers, email and virtual desktops.

A complete listing of our solutions with descriptions denoting service and deployment model has been provided in **Attachment SC-6**.

B. 8.1.2 NIST Essential Characteristics

Strategic Communications' IaaS, PaaS and SaaS offerings meet NIST compliance (as defined in NIST Special Publication 800-145) and is proven based on extensive audits by independent third-party assessors. These audits confirm our solutions can meet new requirements, even as they are issued, and this is the case for the National Institute of Standards and Technology (NIST) guidelines 800-171, which were released in June 2015. This guidance is applicable to the protection of Controlled Unclassified Information (CUI) on nonfederal systems.

Strategic Communications' offerings exceed this requirement through continual security improvement and compliance with current and future requirements, such as NIST 800-171. Our solutions are already compliant with these guidelines, and customers can effectively comply with NIST 800-171 immediately. NIST 800-171 outlines a subset of the NIST 800-53 requirements, a guideline which we have already audited under our provider's FedRAMP program. The FedRAMP Moderate security control baseline is more rigorous than the recommended requirements established in Chapter 3 of 800-171 and includes a significant number of security controls above and beyond those required of FISMA Moderate systems that protect CUI data. A detailed mapping is available in the NIST Special Publication 800-171, starting on page D2 (which is page 37 in the PDF).

8.1.2.1 NIST Characteristic: On-Demand Self-Service

Strategic Communications' IaaS, PaaS and SaaS offerings provide customers of all sizes with on-demand access to a wide range of cloud infrastructure services, charging only for the resources the Purchasing Entity actually uses. Each offering enables the Purchasing Entity to eliminate the need for costly hardware and the administrative pain that goes along with owning and operating it. Instead of the weeks and months it takes to plan, budget, procure, set up, deploy, operate, and hire for a new project, our customers can immediately begin deployment in the cloud with the equivalent of 1, 10, 100, or 1,000 servers. Whether an organization needs to prototype an application or host a production solution, Strategic Communications' IaaS, PaaS and SaaS offerings make it simple for customers to get started and be productive.

All IaaS, PaaS and SaaS services are quickly ordered via an always accessible cloud portal that allows customers to quickly select their prospective cloud solution, enter the required quantity and receive those services generally within minutes.

8.1.2.2 NIST Characteristic: Broad Network Access

Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic by providing a simple way to access servers, storage, databases, and a broad set of application services over the Internet. Cloud computing providers such as AWS own and maintain the network-connected hardware required for these application services, while the end users provisions and uses needs via a web application, mobile client, or programmatically through published and well-documented APIs.

8.1.2.3 NIST Characteristic: Resource Pooling

Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic through utilization of a virtualized, multi-tenant environment. Our providers have implemented security management processes, PCI controls, and other security controls designed to isolate each customer from other customers. Systems are designed to prevent customers from accessing physical hosts or instances not assigned to them by filtering through the virtualization software.
Strategic Communications' offering exceeds this requirement through validation by an independent PCI Qualified Security Assessor (QSA) and was found to be in compliance with all requirements of PCI DSS version 2.0 published in October 2010.

8.1.2.4 NIST Characteristic: Rapid Elasticity

Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic by providing a massive global cloud infrastructure that allows end users to quickly innovate, experiment, and iterate. Instead of waiting weeks or months for hardware, end users can instantly deploy new applications, instantly scale up as the workload grows, and instantly scale down based on demand. Customers need to be confident that their existing infrastructure can handle a spike in traffic and that the spike will not interfere with normal business operations. Strategic Communications' offering of services such as Elastic Load Balancing and Auto Scaling can automatically scale a customer's resources up to meet unexpected demand and then scale those resources down as demand decreases.

8.1.2.5 NIST Characteristic: Measured Service

Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic by utilizing automated monitoring systems to provide a high level of service performance and availability. Proactive monitoring is available through a variety of online tools both for internal and external use. Systems within our offerings are extensively instrumented to monitor key operational metrics. Alarms are configured to notify operations and management personnel when early warning thresholds are crossed on key operational metrics. An on-call schedule is used such that personnel are always available to respond to operational issues. This includes a pager system so alarms are quickly and reliably communicated to operations personnel.

C. 8.1.3 Subcategories

Strategic Communications complete offerings of cloud solutions is included in **Attachment SC-6**.

D. 8.1.4 Compliance with Requirements

Strategic Communications is fully willing to comply with the requirements of Attachments C & D as demonstrated by the attached list of IaaS, PaaS and SaaS solutions categorized by NIST service model, category and deployment methods as described in Attachments C & D.

A. 8.1.5 Adherence to Scope of Services

Strategic Communications' IaaS, PaaS and SaaS offerings adhere to the services, definitions, and deployment models identified in the Scope of Services in Attachment D as follows:

Categorization of Risk

All of Strategic Communications' IaaS, PaaS and SaaS offerings are compliant to store and process Low Risk data as defined by FIPS PUB 199.

Strategic Communications' IaaS, PaaS and SaaS offerings through the AWS GovCloud community cloud are accredited to store and process Low and Medium Risk data as defined by FIPS PUB 199. These offering are designated in our service offering list in **Attachment SC-6**.

Five essential characteristics

1. On-Demand Self-Service. Strategic Communications' IaaS, PaaS and SaaS offerings provide customers of all sizes with on-demand access to a wide range of cloud infrastructure services, charging only for the resources actually used. Each offering enables the Purchasing Entity to eliminate the need for costly hardware and the administrative pain that goes along with owning and operating it. Instead of the weeks and months it takes to plan, budget, procure, set up, deploy, operate, and hire for a new project, our customers can immediately begin deployment in the cloud with the equivalent of 1, 10, 100, or 1,000 servers. Whether an organization needs to prototype an application or host a production solution, Strategic Communications' IaaS, PaaS and SaaS offerings make it simple for customers to get started and be productive.

All IaaS, PaaS and SaaS services are quickly ordered via an always accessible cloud portal that allows customers to quickly select their prospective cloud solution, enter the required quantity and receive those services generally within minutes.

2. Broad Network Access. Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic by providing a simple way to access servers, storage, databases, and a broad set of application services over the Internet. Cloud computing providers such as AWS own and maintain the network-connected hardware required for these application services, while the Purchasing Entity

provisions and uses what is needed via a web application, mobile client, or programmatically through published and well documented APIs.

3. Resource Pooling. Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic through utilization of a virtualized, multi-tenant environment. Our providers have implemented security management processes, PCI controls, and other security controls designed to isolate each customer from other customers. Systems are designed to prevent customers from accessing physical hosts or instances not assigned to them by filtering through the virtualization software.
Strategic Communications' offering exceeds this requirement through validation by an independent PCI Qualified Security Assessor (QSA) and was found to be in compliance with all requirements of PCI DSS version 2.0 published in October 2010.

4. Rapid Elasticity. Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic by providing a massive global cloud infrastructure that allows the Purchasing Entity to quickly innovate, experiment, and iterate. Instead of waiting weeks or months for hardware, the Purchasing Entity can instantly deploy new applications, instantly scale up as workload grows, and instantly scale down based on demand. Customers need to be confident that their existing infrastructure can handle a spike in traffic and that the spike will not interfere with normal business operations. Strategic Communications' offering of services such as Elastic Load Balancing and Auto Scaling can automatically scale a customer's resources up to meet unexpected demand and then scale those resources down as demand decreases.

5. Measured Service. Strategic Communications' IaaS, PaaS and SaaS offering meet this NIST characteristic by utilizing automated monitoring systems to provide a high level of service performance and availability. Proactive monitoring is available through a variety of online tools both for internal and external use. Systems within our offerings are extensively instrumented to monitor key operational metrics. Alarms are configured to notify operations and management personnel when early warning thresholds are crossed on key operational metrics. An on-call schedule is used such that personnel are always available to respond to operational issues. This includes a pager system so alarms are quickly and reliably communicated to operations personnel.

Service Models

Strategic Communications' cloud offering as denoted in **Attachment SC-6** provide solutions/services that align to the following service models:

Infrastructure as a Service (IaaS) – Capability provided to the consumer to provision processing, storage, networks, and other fundamental computing resources where the consumer is able to deploy and run arbitrary software, which can include operating systems and applications. The consumer does not manage or control the underlying cloud infrastructure but has control over operating systems, storage, deployed applications; and possibly limited control of select networking components (e.g., host firewalls).

Platform as a Service (PaaS) - The capability for the consumer to deploy onto the cloud infrastructure consumer-created or-acquired applications created using programming languages and tools supported by the provider. This capability does not necessarily preclude the use of compatible programming

languages, libraries, services, and tools from other sources. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, or storage, but has control over the deployed applications and possibly application hosting environment configurations.

Software as a Service (SaaS) - The capability for the consumer to use the provider's applications running on a cloud infrastructure. The applications are accessible from various client devices through a thin client interface such as a Web browser (e.g., Web-based email), or a program interface. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, storage, or even individual application capabilities, with the possible exception of limited user specific application configuration settings.

Deployment Methods

Strategic Communications' cloud offering as denoted in **Attachment SC-6** provide solutions/services that align to the following deployment methods:

Public cloud - Cloud infrastructure provisioned for open use by the general public. Strategic Communications' cloud offering exists on the premises of its cloud service providers. Solutions/services that are provided under Strategic Communications' public cloud offering are listed in **Attachment SC-6.**

Community cloud - Cloud infrastructure that is specifically provisioned for exclusive use by public sector organizations that have shared concerns (e.g., mission, security requirements, policy, and compliance considerations) such as NIST, HIPAA, FISMA, CJIS, ITAR, FIPS and PCI. An example is Strategic Communications' AWS GovCloud offering, an isolated AWS Region designed to allow US government agencies and customers to move workloads into the cloud by helping them meet certain regulatory and compliance requirements. The AWS GovCloud (US) framework allows US government agencies and their contractors to comply with U.S. International Traffic in Arms Regulations (ITAR) regulations as well as the Federal Risk and Authorization Management Program (FedRAMP) requirements. AWS GovCloud (US) has received an Agency Authorization to Operate (ATO) from the US Department of Health and Human Services (HHS) utilizing a FedRAMP accredited Third Party Assessment Organization (3PAO) for several AWS services.

Solutions/services that are provided under Strategic Communications' community cloud offering are listed in **Attachment SC-6.**

Hybrid cloud - Cloud infrastructure that is a composition of two or more distinct cloud infrastructures (private, community, or public) that remain unique entities, but are bound together by standardized or proprietary technology that enables data and application portability (e.g., cloud bursting for load balancing between clouds).

Through our AWS offering, we are able to provide a unique set of capabilities and features inherent to our service offering that allow extension of private cloud/on-premise infrastructures securely to our community / public clouds.

Examples of these capabilities are provided below:

- **Extend Network Configuration:** Flexible network connectivity is a cornerstone of integrating distributed environments, including AWS and a Purchasing Entity's existing on-premises equipment. With Amazon VPC, a Purchasing Entity can extend on-premises network configuration into virtual private networks on the AWS cloud. AWS resources can operate as if they are part of the existing corporate network. Amazon VPC allows the Purchasing Entity to provision a logically isolated section of the AWS cloud where the Purchasing Entity can launch AWS resources in a virtual network the Purchasing Entity can define. The Purchasing Entity has complete control over virtual networking environment, including selection of IP address range, creation of subnets, and configuration of route tables and network gateways.

- **Integrated Cloud Backups:** AWS helps simplify the backup and recovery environment for the enterprise. The Purchasing Entity can leverage the on-demand nature of the cloud and automate backup and recovery processes so they are not only less complex and lightweight, but also easy to manage and maintain. Storage services with AWS are designed to provide 99.999999999% durability, so the Purchasing Entity can feel confident backups are protected.

- **Integrated Network Connection:** On-premises connection with AWS is best accomplished with AWS Storage Gateway, a software appliance installed in the Purchasing Entity's data center with cloud-based storage to provide seamless and secure integration between an organization's existing IT environment and the AWS storage infrastructure. Using industry-standard storage protocols, the service allows the Purchasing Entity to store data in the AWS cloud for scalable and cost-effective storage. It provides low-latency performance by maintaining frequently accessed data on-premises while securely storing data encrypted in the Amazon Simple Storage Service (Amazon S3) or Amazon Glacier.

- **Integrated Resource Management and Workload Migration:** All AWS cloud services are driven by robust APIs that allow for a wide variety of monitoring and management tools that integrate easily with the Purchasing Entity's AWS cloud resources. It's likely that many of the tools that the Purchasing Entity is using to manage on-premises environments can be extended to include AWS as well. Integrating the AWS environment can provide a simpler and quicker path for cloud adoption, because the Purchasing Entity's operations team does not need to learn new tools or develop completely new processes.

Many of the tools that organizations use to manage on-premises environments can be integrated with AWS as well. Integrating an AWS environment can provide a simpler and quicker path for cloud adoption, because a customer's operations team does not need to learn new tools or develop completely new processes. For example:

AWS Management Portal for vCenter enables customers to manage their AWS resources using VMware vCenter. The portal installs as a vCenter plug-in within the existing vCenter environment. Once installed, it enables customers to migrate VMware VMs to Amazon EC2 and manage AWS

resources from within vCenter. The AWS resources that customers create using the portal can be located in their AWS account, even though those resources have been created using vCenter. For experienced VMware administrators, AWS Management Portal for vCenter provides a familiar look and feel that can make it easy to start using AWS. AWS Management Portal for vCenter is available at no additional charge.

- **The Amazon EC2 VM Import Connector** extends the capabilities of VMware vCenter to provide a familiar graphical user interface customers can use to import their preexisting Virtual Machines (VMs) to Amazon EC2. Using the connector, importing a VM is as simple as selecting a VM from the vSphere infrastructure, and specifying the AWS region, Availability Zone, operating system, instance size, security group, and Amazon Virtual Private Cloud (Amazon VPC) details (if desired) into which the VM should be imported. Once the VM has been imported, customers can launch it as an instance from the AWS Management Console and immediately take advantage of all the features of Amazon EC2.

AWS Management Pack for Microsoft System Center enables customers to view and monitor their AWS resources directly in the Operations Manager console. This way, customers can use a single, familiar console to monitor all of their resources, whether they are on-premises or in the AWS cloud. The Purchasing Entity obtains a consolidated view of all AWS resources across regions and Availability Zones. It also has built-in integration with Amazon CloudWatch so that the metrics and alarms defined in Amazon CloudWatch surface as performance counters and alerts in the Operations Manager console.

Solutions/services that provided under Strategic Communications' hybrid cloud offering are listed in **Attachment SC-6**.

8.2 Subcontractors

Strategic Communications intends to provide all cloud solutions directly as a Value Added Reseller of solutions. Utilizing the traditional Government definition of subcontractors, Strategic Communications will not utilize Subcontractors to provide cloud solutions. However, according to the definition of subcontractors provided in the Q&As for this RFP, Strategic Communications Communication's partners, Amazon and Collab9, may be considered subcontractors for this effort. Our Cloud Services are provided through trusted partnerships.

8.3 Working with Purchasing Entities

A. 8.3.1 Working Together – Data Breach

Personnel

- Strategic Communications Contract Manager – Throughout the lifecycle of the incident for communication with key customer stakeholders and supporting staff

- Strategic Communications Facility Security Manager – Throughout the lifecycle of the incident to ensure appropriate security processes and controls are followed

- Strategic Communications Customer Service Group – For initial capture and tracking of the security event in our incident management system

- Strategic Cloud Service Providers – Throughout the lifecycle of the incident to ensure appropriate disposition based on customer requirements/requests

Response Times

Strategic Communications will notify the customer no later than one (1) hour after receiving confirmation of a security breach. Level of response will be based on severity and type of incident in coordination with the customer and appropriate security entities.

Processes and Timelines

Due to the varying requirements of Purchasing Entities, requirements for handling data breaches will differ. Strategic Communications provides notification to customers no later than one (1) hour after receiving confirmation of a security breach and attempts to adhere to timelines and processes, if provided during initial customer engagement.

Strategic follows the recommendation of NIST 800-61 "Computer Security Incident Handling" for Incident response lifecycle, unless there is an otherwise agreed-upon process in place which supersedes the NIST 800-61 standard process.

Methods of Communication and Assistance

Methods of communication include E-mail, Telephone and In-Person.

B. 8.3.2 Adware, Software and Marketing

Strategic Communications certifies we, and our partners at Amazon and/or Collab9, will not engage in, nor permit agents to, push adware, software, or marketing not explicitly authorized by the Participating Entity or the Master Agreement.

C. 8.3.3 User Test/Staging Environment

Strategic Communications does not offer test and/or proof of concept environments for general project evaluation purposes. If a test/proof of concept environment is required for evaluation of mandatory requirement validation, a request should be submitted to the Strategic Communications Contracts Manager defining the technical parameters and objectives of the test for approval.

D. 8.3.4 ADA Accessibility

Strategic Communications and our partners ensure all computer applications and websites are accessible to people with disabilities. We will comply with all Participating entity accessibility policies and the Americans with Disability Act, as applicable.

E. 8.3.5 Browser Accessibility

Strategic Communications and our partners offer applications and content delivered through web browsers which are accessible using current released versions of multiple browser platforms, including Internet Explorer, Firefox, Chrome, and Safari.

F. 8.3.6 SLA Meetings

Strategic Communications will, prior to the execution of a Service Level Agreement, meet with the Purchasing Entity and cooperate and hold a meeting to determine whether any sensitive or personal information will be stored or used by Strategic Communications that is subject to any law, rule or regulation providing for specific compliance obligations.

8.4 Customer Service

A. 8.4.1 Customer Services

Strategic Communications ensures excellent customer service is provided to Purchasing Entities through our Quality Assurance Measures, Issue Escalation Procedures, and established Service Level Agreements.

Quality Assurance Measures

Strategic Communications' quality processes focus on monitoring key performance areas performed by a team of technical managers and engineers. These key performance areas include planning, analysis, development, testing, quality assurance, configuration, installation, implementation, integration, maintenance, and/or management of networks and systems. Our processes focus on continuous improvement general and administrative functions impacting all areas of contract performance, such as remote management, change control, COOP, property management, hardware and software maintenance agreements, lifecycle management and deliverables, reports and documentation.

The primary method Strategic Communications uses to monitor quality is ongoing work reviews by our Project Manager or Program Manager, dependent upon the contract. The Project Manager assumes responsibility for reviewing significant quality findings and recommendations and acting upon the suggested actions in a timely manner. If an issue arises on a project, Strategic Communications' Corporate Management Personnel also become involved in the quality review process to ensure issues are corrected and risks are mitigated.

Our quality monitoring is first implemented through an inspection. This inspection provides information, verification, and evaluation. After the inspection, a meeting is conducted to review findings and discuss observations. From that meeting, an Inspection Report is developed. This report is a definitive assessment of compliance with established procedures, along with significant findings and observations relative to the inspection objectives, sufficient and relevant documentation, explanation, and comments. Observations and findings are ranked by importance to the project. Recommendations are added to the report for follow-up actions and resolution. Corrective action and

follow-up inspections are completed within a reasonable period consistent with the urgency of the corrective action. A Follow-Up Report is prepared after corrective actions are completed.

- **Methodologies for Measuring Performance.** Quality assurance methods document what functions a product or system must fulfill, and what characteristics it must possess. These methods specify the required resources and ensure resources are available. For production, these methods specify the characteristics of incoming material and supplies, the qualifications of the people carrying out the work, and the tests required to verify actual versus specified qualities. For other systems, quality assurance methods specify performance levels and output parameters. In this way, they result in output of a specified quality.

- **Surveillance Techniques.** The primary methods of surveillance are random monitoring; 100% Inspection, performed monthly or quarterly; and Periodic Inspections.

- **Customer Feedback.** Strategic Communications establishes and maintains professional communication between its employees and customers. The primary objective of this communication is customer satisfaction. Customer satisfaction is the most significant external indicator of the success and effectiveness of all services provided and can be measured through customer complaints. Customer feedback is also obtained through results of formal customer satisfaction surveys.

- **Lean Principles.** Strategic Communications applies lean principles to increase efficiency. By continuously monitoring processes, Strategic Communications is able to reduce waste and unnecessary effort. Lean principles identify and eliminate process steps which do not add value, repeated mistakes that take time to fix, and movement of people and materials without a productive purpose. Lean principles streamline a process by reducing waiting times and emphasizing on-time delivery. Strategic Communications implements these principles by assigning specific responsibilities for performance of particular tasks and the desired results to clearly identified individuals. These individuals are responsible for performance; however, Strategic Communications also allows the individual some leeway in deciding how to achieve the desired results.

- **Six Sigma Principles.** Six sigma principles focus on reducing defects; the term refers to a statistical value for almost zero defects. Measuring such defects is a key part of the system. A defect is an output that does not correspond to user expectations. Strategic Communications designs processes simple enough to allow for low-defect outputs. Strategic Communications applies the functions of define, measure, analyze, improve and control to simplify processes and determine the level of success in achieving zero defects in output.

- **Improving Processes.** Strategic Communications uses lessons learned throughout each project to continually improve processes, a practice based on Value Measurement Methodologies.

- **Acceptable Quality Levels (AQLs).** Strategic Communications utilizes Government-provided Acceptable Quality Levels (AQLs) to define performance standards and ensure quality is met. For critical activities, the desired performance level is typically 100%. Other levels of acceptable performance are specific to the relative importance of the task.

- **ISO 9001:2008 Certification.** Strategic Communications became ISO 9001:2008 certified in January 2016, further mitigating risks within our organization. Our ISO certification demonstrates that our proven quality processes meet the Government's audit requirements and are truly in place and in use. This ISO certification shows our ability to consistently provide products and services that meet customer and applicable statutory and regulatory requirements, and our ability to enhance customer satisfaction through the effective application of our systems, including processes for improvement and assurance of conformity to customer and applicable statutory and regulatory requirements.

Issue Escalation Plan and Procedures

The purpose of the Escalation Process is to provide a repeatable, structured, consistent and measurable process to ensure performance issues receive the appropriate level of attention and focus for problem resolution. Strategic Communications understands equipment issues have a serious impact to businesses. These issues can create both real and perceived risks for our customers and, as such, are a significant priority for Strategic Communications.

If an issue is reported, Strategic Communications immediately executes an escalation process. This process defines and describes the roles, responsibilities and activities we deploy to mitigate customer satisfaction risks when escalating problems or issues within our organization. The goal of the escalation process is to establish a clear set of events, actions and results to promote successful resolution of issues while minimizing negative impacts to end users, maximizing resource availability, and ultimately ensuring customer satisfaction.

Step 1. Issue Identification. An issue is identified during a meeting, analysis, review, workgroup, other project activity, or via a trouble ticket.

Step 2. Validation. Strategic Communications' Project Manager reviews the issue and cross checks the database to confirm item is not pre-existing. Once confirmed as an actual issue, Strategic Communications' Project Manager verifies the issue is clearly worded.

Step 3. Prioritization. Once validated, the issue is prioritized according to impact of issue.

Priority 1: Major Impact. Impact to the Client's business is major, e.g. revenue generation, productivity, communications, etc.

Action: All parties are expected to work continuously until the problem is resolved.

Priority 2: Large Impact. Significant inconvenience to customers – but a temporary "work around" can be implemented.

Action: Work is expected to continue on a workday basis until a more permanent solution is in place.

Priority 3: Small Impact. Minor inconvenience – a smaller client base or a non-extensive problem.

Action: Resolution is worked into a planned project list and schedule.

Step 4. Analysis. The assigned Strategic Communications team member performs required analysis to determine necessary action to resolve issue. The assignee determines:

- Impact to Project Scope
- Impact to Cost and Schedule
- Impact to Staff and Infrastructure Resources
- Impact to User relationships
- Resolution Alternatives (Pros and Cons)
- Suggested Resolution

Step 5. Escalation. If the issue cannot be resolved by the original assignee, it will be escalated to a higher level and reassigned. Escalation will occur if the necessary activities are not being completed or appear they will not be completed in a timely manner, resulting in a risk to target dates and customer satisfaction; and/or it appears requirements are not being met or cannot be met, or those requirements may be contrary to customer expectations with regard to quality of the products or services and subsequent impact on the contract

An issue is raised for which a decision is needed in order to continue progress on the completion of the activities. The level and speed of escalation is relevant to the assigned issue level. Issues with higher priority are escalated to higher levels in shorter time intervals than lower priority problems. Once an issue has been escalated, it will be reassigned to a higher level assignee who will determine an action for resolution.

Step 6. Resolution. Once issue is resolved, the assignee notates issue resolved and notifies the end user of resolution status.

Service Level Agreement(s)

The Service Level Agreements (SLAs) Strategic Communications provides to Purchasing Entities depends on the overarching solution they request to deploy. The SLAs we provide to purchasing entities are typically a flow-down from the underlying infrastructure provider based on the region and product set. The SLAs we offer for services we directly deploy are fully negotiable depending on a Purchasing Entity's special requirements. Typically, we prefer to support the same cloud service offerings including IaaS, PaaS, and SaaS with the same to limit the complexity of back office paperwork and ensures equitable treatment across all of our customers.

Strategic Communications has included a *sample* of our **Managed Services SLA** as **Attachment SC-10** and a *sample* **SLA for Collab9's cloud offerings** as **Attachment SC-12**. AWS currently provides

SLAs for several products. Due to the rapidly evolving nature of AWS's product offerings, AWS's SLAs are best reviewed directly online. **Attachment SC-11** contains hot links to **AWS's SLAs.**

B. 8.4.2 Customer Service Requirements

Strategic Communications is able to comply with the given customer service requirements.

Lead Representative

Strategic Communications will assign one lead representative for each entity that executes a Participating Addendum. Strategic Communications will ensure all contact information is kept current.

Help Desk

Strategic Communications offers Customer Service Representative(s) available by phone or email. We have an established Help Desk at our corporate headquarters in Louisville, KY which provides telephone support and is able to support the NASPO Contract requirements of 7:00 AM to 6:00PM Monday – Sunday for applicable time zones. Our Help Desk receives and responds to support requests. Our Help Desk is available via telephone 24 hours a day, 7 days a week (24/7). All calls made after hours are captured and assigned to a technician the next business day. We also utilize an after-hours service to ensure calls are monitored. Strategic Communications tracks all Help Desk Tickets and is able to provide reports which give response statistics for service calls.

Proven Response Times

Strategic Communications responded to requests for remedial maintenance support on our AMCOM contract in **less than 28 minutes** per action. We achieved this response time by analyzing historical maintenance actions and pre-positioning spare parts in locations having a high concentration of equipment. This approach is a proven and instituted approach, guaranteeing Strategic Communications can provide NASPO with response to inquiries within one (1) business day, as requested.

The approach illustrated in the table below rigidly enforced internal standards for processing requests for service and decreased the response time normally associated with a centralized service facility.

Priority	CY04	CY05	CY06	CY07	CY08	CY09	CY10	CY11	AVG
P1	29.16	31.32	28.26	43.32	29.88	28.86	28.98	26.40	30.77
P2	29.16	25.44	27.66	28.50	27.78	26.28	28.32	27.30	27.55

Response Time (in minutes).

Design Services

Strategic Communications will provide design services for any applicable categories. We offer a full Cloud Division, including a Senior Cloud Architect.

Installation Services

Strategic Communications will provide installation services for any applicable categories.

8.5 Security of Information

A. 8.5.1 Protecting Data

Strategic Communications has a Federal Government-approved Secret Facility Clearance in place. We have established procedures in place to protect data. All of Strategic Communications' IaaS, PaaS and SaaS follow a shared responsibility model with basic but important tenants regarding data ownership and management:

1. Customers continue to own their data;
2. Customers choose the geographic location(s) in which to store their data—it does not move unless the customer decides to move it;
3. Customers can download or delete their data whenever they like; and
4. Customers should consider the sensitivity of their data, and decide if and how to encrypt the data while it is in transit and at rest.

Strategic Communications' cloud service offerings provide customers with the ability to delete their data. However, customers retain control and ownership of their data, and it is the customer's responsibility to manage their data.

B. 8.5.1 Deleting Data

All of Strategic Communications' IaaS, PaaS and SaaS offerings provide mechanism to delete their data. Strategic Communications will be able to sanitize all data upon request, in accordance with NIST Special Publications 800-88 'Guidelines for Media Sanitization. Strategic Communications exceeds the requirement to sanitize data by providing additional capabilities as described below.

- Customers can use services such Multi-Object Delete to delete large numbers of objects from services such as Amazon S3. This feature allows customers to send multiple object keys in a single request to speed up their deletes. This service is offered free of charge as part of the Amazon S3 service.

- Customers can use the Object Expiration feature to remove objects from their buckets after a specified number of days. With Object Expiration customers can define the expiration rules for a set of objects in their bucket through the Lifecycle Configuration policy that they apply to the bucket. Each Object Expiration rule allows customers to specify a prefix and an expiration period.

C. 8.5.2 Compliance with Privacy and Security Laws

Strategic Communications will comply with all applicable laws related to data privacy and security. Strategic Communications' IaaS, PaaS and SaaS offerings utilize providers who are industry leaders in cloud privacy and security. This requirement is met through extensive audits by independent third-party assessors. These audits confirm our solutions can meet new requirements, even as they are issued, and this is the case for the National Institute of Standards and Technology (NIST) guidelines 800-171, which were released in June 2015. This guidance is applicable to the protection of Controlled Unclassified Information (CUI) on nonfederal systems.

Strategic Communications' offerings exceed this requirement through continual security improvement and compliance with current and future requirements, such as NIST 800-171. Our solutions are already compliant with these guidelines, and customers can effectively comply with NIST 800-171 immediately. NIST 800-171 outlines a subset of the NIST 800-53 requirements, a guideline which has been audited under our provider's FedRAMP program. The FedRAMP Moderate security control baseline is more rigorous than the recommended requirements established in Chapter 3 of 800-171 and includes a significant number of security controls above and beyond those required of FISMA Moderate systems that protect CUI data.

The intent to comply with all applicable laws related to data privacy and security is demonstrated through the following regulations, standards and best practices that Strategic Communications' offerings currently meet, including:

- Federal Risk and Authorization Management Program (FedRAMP)
- Service Organization Controls (SOC) 1/American Institute of Certified Public Accountants (AICPA): AT 801 (formerly Statement on Standards for Attestation Engagements [SSAE] No. 16)/International Standard on Assurance Engagements (ISAE) 3402 (formerly Statement on Auditing Standards [SAS] No. 70)
- SOC 2
- SOC 3
- Payment Card Industry Data Security Standard (PCI DSS)
- International Organization for Standardization (ISO) 27001
- ISO 27017
- ISO 27018
- ISO 9001
- Department of Defense (DoD) Security Requirements Guide (SRG) security impact levels 2 and 4
- Federal Information Security Management Act (FISMA)
- US Health Insurance Portability and Accountability Act (HIPAA)
- FBI Criminal Justice Information Services (CJIS)
- National Institute of Standards and Technology (NIST) 800-171
- International Traffic in Arms Regulations (ITAR)
- Federal Information Processing Standard (FIPS) 140-2
- Family Educational Rights and Privacy Act (FERPA)
- Information Security Registered Assessors Program (IRAP) (Australia)

- IT-Grundschutz (Germany)

D. 8.5.3 User Account Access

Strategic Communications certifies we will not access a Purchasing Entity's user accounts or data, except in the course of data center operations, response to service or technical issues, as required by the express terms of the Master Agreement, the applicable Participating Addendum, and/or the applicable Service Level Agreement.

8.6 Privacy and Security

A. 8.6.1 Commitment to NIST

Strategic Communications' IaaS, PaaS and SaaS offerings meet NIST compliance (as defined in NIST Special Publication 800-145) and is proven based on extensive audits by independent third-party assessors. These audits confirm our solutions can meet new requirements, even as they are issued, and this is the case for the National Institute of Standards and Technology (NIST) guidelines 800-171, which were released in June 2015. This guidance is applicable to the protection of Controlled Unclassified Information (CUI) on nonfederal systems.

Strategic Communications' offerings exceed this requirement through continual security improvement and compliance with current and future requirements, such as NIST 800-171. Our solutions are compliant with these guidelines, and customers can effectively comply with NIST 800-171 immediately. NIST 800-171 outlines a subset of the NIST 800-53 requirements, a guideline which has been audited under our provider's FedRAMP program. The FedRAMP Moderate security control baseline is more rigorous than the recommended requirements established in Chapter 3 of 800-171 and includes a significant number of security controls above and beyond those required of FISMA Moderate systems that protect CUI data. A detailed mapping is available in the NIST Special Publication 800-171, starting on page D2 (which is page 37 in the PDF).

Under this compliance all of Strategic Communications' IaaS, PaaS and SaaS offerings are compliant to store and process Low Risk data as defined by FIPS PUB 199.

Strategic Communications' IaaS, PaaS and SaaS offerings through the AWS GovCloud community cloud are accredited to store and process Low and Medium Risk data as defined by FIPS PUB 199. These offering are designated in our service offering list in **Attachment SC-6**.

B. 8.6.2 Security Certifications

Strategic Communications' IaaS, PaaS and SaaS offerings currently hold or are managed in accordance with the following regulations, standards, and best practices.

- Federal Risk and Authorization Management Program (FedRAMP)
- Service Organization Controls (SOC) 1/American Institute of Certified Public Accountants (AICPA): AT 801 (formerly Statement on Standards for Attestation Engagements [SSAE] No. 16)/International Standard on Assurance Engagements (ISAE) 3402 (formerly Statement on Auditing Standards [SAS] No. 70)
- SOC 2
- SOC 3
- Payment Card Industry Data Security Standard (PCI DSS)
- International Organization for Standardization (ISO) 27001
- ISO 27017
- ISO 27018
- ISO 9001
- Department of Defense (DoD) Security Requirements Guide (SRG) security impact levels 2 and 4
- Federal Information Security Management Act (FISMA)
- US Health Insurance Portability and Accountability Act (HIPAA)
- FBI Criminal Justice Information Services (CJIS)
- National Institute of Standards and Technology (NIST) 800-171
- National Institute of Standards and Technology (NIST) 800-53
- International Traffic in Arms Regulations (ITAR)
- Federal Information Processing Standard (FIPS) 140-2
- Family Educational Rights and Privacy Act (FERPA)
- Information Security Registered Assessors Program (IRAP) (Australia)
- IT-Grundschutz (Germany)

Strategic Communications' Facility Security Officer (FSO) oversees all security-related issues. Our FSO follows all guidelines set forth in the National Industrial Security Program Operating Manual (NISPOM) and by working with Defense Security Services (DSS). Strategic Communications is very experienced with security protocols. We support a multitude of large Government contracts with cleared personnel. Strategic Communications screens personnel identified to support contracts requiring a clearance to ensure security clearances are current and valid. Strategic Communications supports mission critical networks for the Department of Defense and Civilian Agencies. Through several of our existing contracts, we supply these Government agencies with full-time onsite engineers who maintain Secret Government clearances. Strategic Communications' security processes require all personnel assigned to a Government contract complete training on DFARS 252.204-7012, "Safeguarding Unclassified Controlled Technical Information," to include a discussion and familiarization of NIST Special Publication 800-53, "Security and Privacy Controls for Federal Information Systems and Organizations." Strategic Communications ensures all Government equipment, information and property provided are safeguarded.

C. 8.6.3 Security Practices

Strategic Communications' IaaS, PaaS and SaaS offerings utilize monitoring tools designed to detect unusual or unauthorized activities and conditions at ingress and egress communication points. These tools monitor server and network usage, port scanning activities, application usage, and unauthorized intrusion attempts. The tools have the ability to set custom performance metrics thresholds for unusual activity.

Systems within our cloud environments are extensively instrumented to monitor key operational metrics. Alarms are configured to automatically notify operations and management personnel when early warning thresholds are crossed on key operational metrics. An on-call schedule is used so personnel are always available to respond to operational issues. This includes a pager system so alarms are quickly and reliably communicated to operations personnel.

Documentation is maintained to aid and inform operations personnel in handling incidents or issues. If the resolution of an issue requires collaboration, a conferencing system is used which supports communication and logging capabilities. Trained call leaders facilitate communication and progress during the handling of operational issues that require collaboration. Post-mortems are convened after any significant operational issue, regardless of external impact, and Cause of Error (COE) documents are drafted so the root cause is captured and preventative actions are taken in the future. Implementation of the preventative measures is tracked during weekly operations meetings.

These security monitoring tools help identify several types of denial of service (DoS) attacks, including distributed, flooding, and software/logic attacks. When DoS attacks are identified, an incident response process is initiated. In addition to the DoS prevention tools, redundant telecommunication providers at each region as well as additional capacity protect against the possibility of DoS attacks.

The networks hosting our cloud solutions provide significant protection against traditional network security issues, and Purchasing Entities can implement further protection. The following are a few examples:

- **Distributed Denial Of Service (DDoS) Attacks.** API endpoints are hosted on large, Internet-scale, world-class infrastructure that benefits from the same engineering expertise that has built companies like Amazon into the world's largest online retailer. Proprietary DDoS mitigation techniques are used. Additionally, our cloud networks are multi-homed across a number of providers to achieve Internet access diversity.

- **Man in the Middle (MITM) Attacks.** All of the provided APIs are available via SSL-protected endpoints which provide server authentication. Server instances launched from images automatically generate new SSH host certificates on first boot and log them to the instance's console. Purchasing Entities can then use the secure APIs to call the console and access the host certificates before logging into the instance for the first time. We encourage Purchasing Entities to use SSL for all interactions with cloud environments.

- **IP Spoofing.** Server instances cannot send spoofed network traffic. Our controlled, host-based firewall infrastructure will not permit an instance to send traffic with a source IP or MAC address other than its own.

- **Port Scanning.** Unauthorized port scans by customers are a violation of the Acceptable Use Policy. Violations of the Acceptable Use Policy are taken seriously, and every reported violation is investigated. Customers can report suspected abuse via the contacts available on our cloud provider's website. When unauthorized port scanning is detected, it is stopped and blocked. Port scans of server instances are generally ineffective because, by default, all inbound ports on server instances are closed and are only opened by the Purchasing Entity. A Purchasing Entity's strict management of security groups/host based firewall can further mitigate the threat of port scans. If a Purchasing Entity configures the security group/ host based firewall to allow traffic from any source to a specific port, then that specific port will be vulnerable to a port scan. In these cases, the Purchasing Entity must use appropriate security measures to protect listening services that may be essential to their application from being discovered by an unauthorized port scan. For example, a web server must clearly have port 80 (HTTP) open to the world, and the administrator of this server is responsible for the security of the HTTP server software, such as Apache. The Purchasing Entity may request permission to conduct vulnerability scans as required to meet specific compliance requirements. These scans must be limited to the Purchasing Entity's own instances and must not violate the Acceptable Use Policy. Advanced approval for these types of scans can be initiated by submitting a request via our cloud provider's website or by contacting the Strategic Communications Contract Manager.

- **Packet sniffing by other tenants.** It is not possible for a virtual instance running in promiscuous mode to receive or "sniff" traffic that is intended for a different virtual instance. While Purchasing Entities can place interfaces into promiscuous mode, the hypervisor will not deliver any traffic to them that is not addressed to them. Even two virtual instances that are owned by the same customer located on the same physical host cannot listen to each other's traffic. Attacks such as ARP cache poisoning do not work within our cloud environments. While safeguards provide ample protection against one customer inadvertently or maliciously attempting to view another's data, as a standard practice, a Purchasing Entity should encrypt sensitive traffic.

D. 8.6.4 Data Confidentiality Standards

At a high level, Strategic Communications' IaaS, PaaS and SaaS offerings operate under a "Shared Responsibility" model, whereas cloud computing customers are building systems on top of cloud infrastructure, the security and compliance responsibilities are shared between the Cloud Service Providers (CSP) and cloud customers. In an Infrastructure as a Service (IaaS) model, customers control how they architect and secure their applications and data put on the infrastructure, while Strategic Communications and its CSPs are responsible for providing services on a highly secure and controlled platform and providing a wide array of additional security features. The level of CSP and customer responsibilities in this shared responsibility model depends on the cloud deployment model (see the NIST Definition of Cloud Computing models). Customers should be clear as to their responsibilities

in each model. An example of how this shared security model is applied to Strategic Communications' Amazon Web Services offering is depicted in Figure 1.

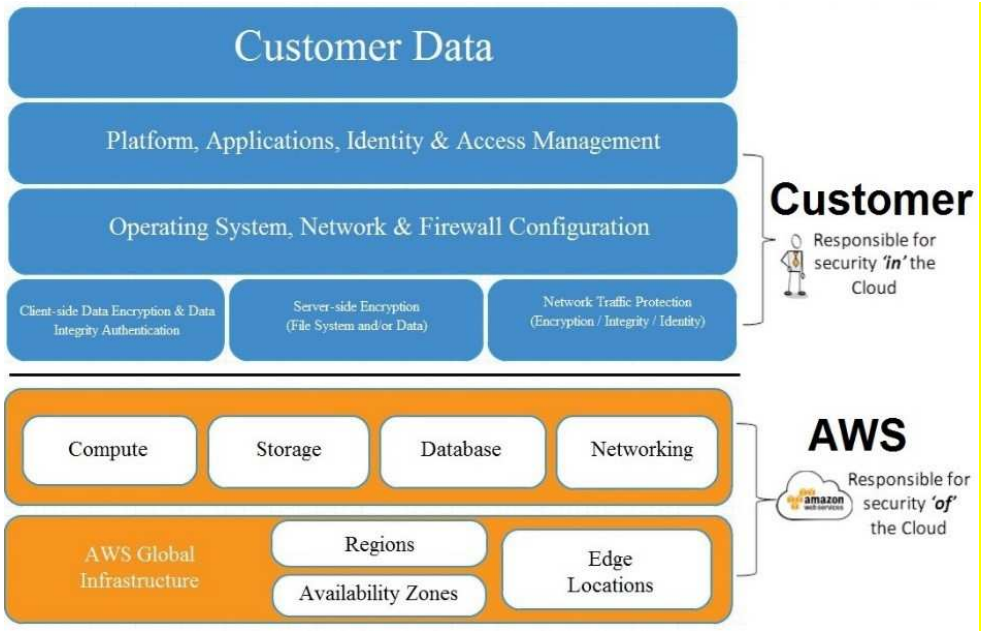

Figure 1 – Example of the Shared Responsibility Model applied to AWS

- **AWS Responsibility:** AWS operates, manages, and controls the infrastructure components, from the host operating system and virtualization layer down to the physical security of the facilities in which the services operate.
- **Customer/Partner Responsibility:** Customers/partners assume responsibility and management of the guest operating system (including updates and security patches), other associated application software, configuration of the AWS-provided security group firewalls, and other security, change management, and logging features.

Strategic Communications and its cloud service providers do not access customer data, and customers are given the choice as to how they store, manage and protect their data. There are four important basics regarding data ownership and management in the shared responsibility model:

1) Customers continue to own their data.
2) Customers choose the geographic location(s) in which to store their data—it does not move unless the customer decides to move it.
3) Customers can download or delete their data whenever they like.

Customers should consider the sensitivity of their data and decide if and how to encrypt the data while it is in transit and at rest.

Strategic Communications exceeds this requirement by offering solutions that have been formally tested and accredited to standards that are in place to ensure data confidentiality. Examples of these include:

- Federal Risk and Authorization Management Program (FedRAMP)
- Service Organization Controls (SOC) 1/American Institute of Certified Public Accountants (AICPA): AT 801 (formerly Statement on Standards for Attestation Engagements [SSAE] No. 16)/International Standard on Assurance Engagements (ISAE) 3402 (formerly Statement on Auditing Standards [SAS] No. 70)
- SOC 2
- SOC 3
- Payment Card Industry Data Security Standard (PCI DSS)
- Department of Defense (DoD) Security Requirements Guide (SRG) security impact levels 2 and 4
- Federal Information Security Management Act (FISMA)
- US Health Insurance Portability and Accountability Act (HIPAA)
- FBI Criminal Justice Information Services (CJIS)
- International Traffic in Arms Regulations (ITAR)
- Family Educational Rights and Privacy Act (FERPA)
- ISO 27017

Because Strategic Communications' IaaS, PaaS and SaaS offerings utilize centralized identity and access management consoles to provide customers the ability to restrict the visibility of their cloud hosted data and documents to specific users and groups, prevention of exposure to unauthorized personnel is shared with the customer.

Standards regarding hardware policy and data disposal have been provided under the response for section 8.5.1.

E. 8.6.5 Third Party Attestations, Reports, Security Credentials and Certifications

Strategic Communications' IaaS, PaaS and SaaS offerings currently hold or are managed in accordance with the following regulations, standards, and best practices.

- Federal Risk and Authorization Management Program (FedRAMP)
- Service Organization Controls (SOC) 1/American Institute of Certified Public Accountants (AICPA): AT 801 (formerly Statement on Standards for Attestation Engagements [SSAE] No. 16)/International Standard on Assurance Engagements (ISAE) 3402 (formerly Statement on Auditing Standards [SAS] No. 70)
- SOC 2
- SOC 3
- Payment Card Industry Data Security Standard (PCI DSS)
- International Organization for Standardization (ISO) 27001
- ISO 27017
- ISO 27018

- ISO 9001
- Department of Defense (DoD) Security Requirements Guide (SRG) security impact levels 2 and 4
- Federal Information Security Management Act (FISMA)
- US Health Insurance Portability and Accountability Act (HIPAA)
- FBI Criminal Justice Information Services (CJIS)
- National Institute of Standards and Technology (NIST) 800-171
- National Institute of Standards and Technology (NIST) 800-53
- International Traffic in Arms Regulations (ITAR)
- Federal Information Processing Standard (FIPS) 140-2
- Family Educational Rights and Privacy Act (FERPA)
- Information Security Registered Assessors Program (IRAP) (Australia)
- IT-Grundschutz (Germany)

F. 8.6.6 Logging Process

Strategic Communications' IaaS, PaaS and SaaS offerings provide compressive logging processes that span across services and monitors virtual servers, storage, network components and SaaS service availability.

At the heart of the logging process is the logging and monitoring of Application Program Interface (API) calls. A key component in our security and operational best practices, as well as requirements for industry and regulatory compliance. Strategic Communications customers can leverage multiple features and capabilities, along with third-party tools, to monitor their service instances and manage/analyze log files.

Examples of these capabilities and how they fit into our overarching logging process is provided below for our primary AWS offering:

AWS CloudTrail

AWS CloudTrail is a web service that records API calls to supported AWS services in an AWS account, delivering a log file to an Amazon Simple Storage Service (Amazon S3) bucket. AWS CloudTrail alleviates common challenges experienced in an on-premise environment by making it easier for customers to enhance security and operational processes while demonstrating compliance with policies or regulatory standards.

With AWS CloudTrail, customers can get a history of AWS API calls for their account, including API calls made via the AWS Management Console, AWS SDKs, command line tools, and higher-level AWS services (such as AWS CloudFormation). The AWS API call history produced by AWS CloudTrail enables security analysis, resource change tracking, and compliance auditing.

- For information on the services and features supported by AWS CloudTrail, visit the AWS CloudTrail FAQs on the AWS website.

- The AWS whitepaper Security at Scale: Logging in AWS provides an overview of common compliance requirements related to logging, detailing how AWS CloudTrail features can help satisfy these requirements.

- The AWS whitepaper Auditing Security Checklist for Use of AWS provides customers with a checklist to assist in evaluating AWS for the purposes of an internal review or external audit.

AWS CloudTrail: Features and Benefits

Some of the many features of AWS CloudTrail include:

- **Increased Visibility:** AWS CloudTrail provides increased visibility into user activity by recording AWS API calls. Customers can answer questions such as, what actions did a given user take over a given time period? For a given resource, which user has taken actions on it over a given time period? What is the source IP address of a given activity? Which activities failed due to inadequate permissions?

- **Durable and Inexpensive Log File Storage:** AWS CloudTrail uses Amazon S3 for log file storage and delivery, so log files are stored durably and inexpensively. Customers can use Amazon S3 lifecycle configuration rules to further reduce storage costs. For example, customers can define rules to automatically delete old log files or archive them to Amazon Glacier for additional savings.

- **Easy Administration:** AWS CloudTrail is a fully managed service; customers simply turn on AWS CloudTrail for their account using the AWS Management Console, the Command Line Interface, or the AWS CloudTrail SDK and start receiving AWS CloudTrail log files in the specified Amazon S3 bucket.

- **Notifications for Log File Delivery:** AWS CloudTrail can be configured to publish a notification for each log file delivered, thus enabling customers to automatically take action upon log file delivery. AWS CloudTrail uses the Amazon Simple Notification Service (Amazon SNS) for notifications.

- **Choice of Partner Solutions:** Multiple partners including AlertLogic, Boundary, Loggly, Splunk, and Sumologic offer integrated solutions to analyze AWS CloudTrail log files. These solutions include features like change tracking, troubleshooting, and security analysis. For more information, see the AWS CloudTrail partners section.

- **Log File Aggregation:** AWS CloudTrail can be configured to aggregate log files across multiple accounts and regions so that log files are delivered to a single bucket. For detailed instructions, refer to the Aggregating CloudTrail Log Files to a Single Amazon S3 Bucket section of the user guide.

Amazon CloudWatch

Amazon CloudWatch is a monitoring service for AWS cloud resources and the applications run on AWS. Customers can use Amazon CloudWatch to collect and track metrics, collect and monitor log files, and set alarms. Amazon CloudWatch can monitor AWS resources such as Amazon EC2 instances, Amazon DynamoDB tables, and Amazon RDS DB instances, as well as custom metrics generated by customer applications and services, and any log files that applications generate. Customers can use Amazon CloudWatch to gain system-wide visibility into resource utilization, application performance, and operational health, using these insights to react and keep their application running smoothly.

Customer can use CloudWatch Logs to monitor and troubleshoot systems and applications using their existing system, application, and custom log files. Customers can send their existing system, application, and custom log files to CloudWatch Logs and monitor these logs in near real-time. This helps customers better understand and operate their systems and applications, and they can store their logs using highly durable, low-cost storage for later access.

LogAnalyzer for Amazon CloudFront

LogAnalyzer allows customers to analyze their Amazon CloudFront Logs using Amazon Elastic MapReduce (Amazon EMR). Using Amazon EMR and the LogAnalyzer application customers can generate usage reports containing total traffic volume, object popularity, a breakdown of traffic by client IPs, and edge location. Reports are formatted as tab delimited text files, and delivered to the Amazon S3 bucket that customers specify.

Amazon CloudFront's Access Logs provide detailed information about requests made for content delivered through Amazon CloudFront, AWS's content delivery service. The LogAnalyzer for Amazon CloudFront analyzes the service's raw log files to produce a series of reports that answer business questions commonly asked by content owners.

Reports Generated

This LogAnalyzer application produces four sets of reports based on Amazon CloudFront access logs. The Overall Volume Report displays total amount of traffic delivered by CloudFront over the course of whatever period specified. The Object Popularity Report shows how many times each customer object is requested. The Client IP report shows the traffic from each different Client IP that made a request for content. The Edge Location Report shows the total number of traffic delivered through each edge location. Each report measures traffic in three ways: the total number of requests, the total number of bytes transferred, and the number of request broken down by HTTP response code. The LogAnalyzer is implemented using Cascading (http://www.cascading.org) and is an example of how to construct an Amazon Elastic MapReduce application. Customers can also customize reports generated by the LogAnalyzer.

Third Party Tools

Many third-party log monitoring and analysis tools are available on the AWS Marketplace.

G. 8.6.7 Visibility Restriction

Strategic Communications' IaaS, PaaS and SaaS offerings utilize centralized identity and access management consoles to provide customers the ability to restrict the visibility of their cloud hosted data and documents to specific users and groups.

An example of this capability is through our AWS offerings, which capabilities such as:

- **AWS Identity and Access Management (IAM)** - A web service that enables AWS customers to manage users and user permissions in AWS. The service is targeted at organizations with multiple users or systems that use AWS products such as Amazon EC2, Amazon SimpleDB, and the AWS Management Console. With AWS IAM, a Purchasing Entity can centrally manage users, security credentials such as access keys, and permissions that control which AWS resources users can access.

- Permissions allow the Purchasing Entity specify who has access to AWS resources and which actions they can perform on those resources. Every AWS Identity and Access Management (IAM) user starts with no permissions. In other words, by default, users can do nothing, not even view their own access keys. To give a user permission to do something, a Purchasing Entity can add the permission to the user (that is, attach a policy to the user), or add the user to a group that has the desired permission.

For data and documents that are stored on server instances, Strategic Communications' IaaS and PaaS offerings provide customers the capability to create Virtual Private Clouds. Virtual Private Cloud (VPC) allows a Purchasing Entity to provision a logically isolated section of the Cloud environment where the Purchasing Entity can launch resources in a virtual network the Purchasing Entity defines. The Purchasing Entity has complete control over the virtual networking environment, including selection of their own IP address range, creation of subnets, and configuration of route tables and network gateways.

A Purchasing Entity can easily customize the network configuration for their Virtual Private Cloud. For example, a Purchasing Entity can create a public-facing subnet for webservers that has access to the Internet, and place backend systems such as databases or application servers in a private-facing subnet with no Internet access. A Purchasing Entity can leverage multiple layers of security, including security groups and network access control lists, to help control access to data and documents on server instances in each subnet.

H. 8.6.8 Security Notification

Incident Response Requirements and Process Verification of our Cloud providers meets FedRAMP standards as demonstrated by the FedRAMP accreditation held by our providers.

Strategic Communications' Cloud Providers have implemented various methods of external communication to support its customer base and the community. Mechanisms are in place to allow the customer support team to be notified of operational issues that impact the customer experience. For

example, a "Service Health Dashboard" is available and maintained by the customer support team to alert customers to any issues that may be of broad impact.

The “AWS Security Center” provided by Amazon is another example of an available resource to provide a Purchasing Entity with security and compliance details about AWS. A Purchasing Entity can also subscribe to AWS Support offerings that include direct communication with the customer support team and proactive alerts to any customer impacting issues.

I. 8.6.9 Security Controls

Strategic Communications’ IaaS and PaaS offerings provide customers the capability to create Virtual Private Clouds. Virtual Private Cloud (VPC) allows a Purchasing Entity to provision a logically isolated section of the Cloud environment where the Purchasing Entity can launch resources in a virtual network the Purchasing Entity defines. The Purchasing Entity has complete control over the virtual networking environment, including selection of IP address range, creation of subnets, and configuration of route tables and network gateways.

A Purchasing Entity can easily customize the network configuration for Virtual Private Cloud. For example, the Purchasing Entity can create a public-facing subnet for webservers that has access to the Internet, and place backend systems such as databases or application servers in a private-facing subnet with no Internet access. The Purchasing Entity can leverage multiple layers of security, including security groups and network access control lists, to help control access to server instances in each subnet.

J. 8.6.10 Security Technical Reference Architectures

Because Strategic Communications partners with “best of breed” providers in offering market leading cloud solutions, Strategic Communications’ IaaS, PaaS and SaaS offerings utilize Security Technical Reference Architectures that closely align or mirror those of NIST and the Cloud Security Alliance.

An example is our Amazon Web Services offering, which offers customers a powerful cloud security capability based on cutting-edge security experience and backed by an extensive repertoire of accreditations and authorizations. In The Forrester Wave™: Public Cloud Platform Service Providers’ Security, Q4 2014 report, Forrester Research named AWS as the only provider in the Leader category. Forrester stated, "AWS leads the pack. AWS demonstrated not only a broad set of security capabilities in data center security, certifications, and network security, but also excelled in customer satisfaction, security services partnerships, and a large installed base.” AWS has achieved two Provisional Authorizations to Operate (P-ATOs) for mission systems designated by DISA as Cloud Computing Security Requirements Guide (SRG) level 2 (covering all AWS regions in the contiguous United States [CONUS]) and SRG level 4 (covering only the AWS GovCloud (US) Region).

In addition, Amazon’s status as the de-facto leader in the cloud services arena has been referenced and utilized in NIST publications such as NIST SP800-146, that provide a basis of reference for the overarching NIST Cloud Computing Reference Architecture document (NIST SP500-292).

8.7 Migration and Redeployment Plan

A smooth transition requires careful planning, execution and performance measurement and involves people, processes, technology, infrastructure and tools. To succeed, it requires effective project and people management, good governance and adoption of best practices and standards. In the event Strategic Communications is no longer providing a Purchasing Entity with support, Strategic Communications will implement the following processes and procedures to ensure a successful transition.

Internal Review. Strategic Communications performs an internal review meeting upon notification of a requirement to transition the services. This internal review identifies products, personnel, and everything related to the contract which may need to be transitioned. During this meeting, Strategic Communications addresses common transition challenges, such as:

- *Insufficient information*: If the new contractor has to transition into support with only partial information, the level of service will be affected. Strategic Communications formulates procedures for transitioning information to the new contractor.
- *Lack of planning*: When a switchover takes place with little time for proper planning, knowledge transfer and training, the new contractor is not well-prepared to take over operations and this may lead to disruptions in business. Strategic Communications ensures a contract switchover is planned to secure cooperation with the new contractor.
- *Timeline pressures*: When the outgoing team is unwilling to cooperate or even turns hostile to the switchover, it could mean added pressure on timelines for the transition. If a switchover is mid-contract, it could further push back existing projects. Strategic Communications ensures cooperation with the new contractor, ensuring the project does not lose track and preventing a timeline slip.
- *Lack of people management*: During the transition, Strategic Communications, the new contractor or personnel, and the Purchasing Entity need to work together; however, the end goals are different. Strategic Communications examines potential issues such as organizational structure, reporting levels and stakeholder incentives which may not be in sync for a smooth transition. Strategic Communications attempts to ensure any staffing issues are addressed to ensure a smooth transition.

Schedule Development. Strategic Communications develops a transition schedule to ensure milestones are clearly identified for a successful transition.

Data Integrity. Strategic Communications ensures all data is owned by the Purchasing Entity. The Purchasing Entity retains ownership of data and other intellectual property, and is able to transfer data to a new location easily. Data will continue to be backed up during any transition period.

Sanitization. Strategic Communications will sanitize all data upon request, in accordance with NIST Special Publications 800-88 'Guidelines for Media Sanitization. Our data deletion procedures are discussed in detail in Section 8.11. Please refer to this section for additional details.

8.8 Service or Data Recovery

A. 8.8.1 Situational Responses

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as it's Cloud Service Provider:

Amazon's infrastructure has a high level of availability and provides customers the features to deploy a resilient IT architecture. AWS has designed its systems to tolerate system or hardware failures with minimal customer impact. Data center Business Continuity Management at AWS is under the direction of the Amazon Infrastructure Group.

Availability

Data centers are built in clusters in various global regions. All data centers are online and serving customers; no data center is "cold." In case of failure, automated processes move customer data traffic away from the affected area. Core applications are deployed in an N+1 configuration, so that in the event of a data center failure, there is sufficient capacity to enable traffic to be load-balanced to the remaining sites.

AWS provides the Purchasing Entity with flexibility to place instances and store data within multiple geographic regions as well as across multiple availability zones within each region. Each availability zone is designed as an independent failure zone. This means that availability zones are physically separated within a typical metropolitan region and are located in lower risk flood plains (specific flood zone categorization varies by Region). In addition to discrete uninterruptable power supply (UPS) and onsite backup generation facilities, they are each fed via different grids from independent utilities to further reduce single points of failure. Availability zones are all redundantly connected to multiple tier-1 transit providers.

Each Purchasing Entity should architect AWS usage to take advantage of multiple regions and availability zones. Distributing applications across multiple availability zones provides the ability to remain resilient in the face of most failure modes, including natural disasters or system failures.

Fault-Tolerant Design

Amazon's infrastructure has a high level of availability and provides a Purchasing Entity with the capability to deploy a resilient IT architecture. AWS has designed its systems to tolerate system or hardware failures with minimal customer impact.

Data centers are built in clusters in various global regions. All data centers are online and serving customers; no data center is "cold." In case of failure, automated processes move customer data traffic away from the affected area. Core applications are deployed in an N+1 configuration, so that in the event of a data center failure, there is sufficient capacity to enable traffic to be load-balanced to the remaining sites.

AWS provides a Purchasing Entity with the flexibility to place instances and store data within multiple geographic regions as well as across multiple availability zones within each region. Each availability zone is designed as an independent failure zone. This means that availability zones are physically separated within a typical metropolitan region and are located in lower risk flood plains (specific flood zone categorization varies by region). In addition to utilizing discrete uninterruptable power supply (UPS) and onsite backup generators, they are each fed via different grids from independent utilities to further reduce single points of failure. Availability zones are all redundantly connected to multiple tier-1 transit providers.

The Purchasing Entity should architect AWS usage to take advantage of multiple regions and availability zones. Distributing applications across multiple availability zones provides the ability to remain resilient in the face of most failure scenarios, including natural disasters or system failures. However, the Purchasing Entity should be aware of location-dependent privacy and compliance requirements, such as the EU Data Privacy Directive. Data is not replicated between regions unless proactively done so by the customer, thus allowing customers with these types of data placement and privacy requirements the ability to establish compliant environments. It should be noted that all communications between regions is across public Internet infrastructure; therefore, appropriate encryption methods should be used to protect sensitive data.

As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US), EU (Ireland), EU (Frankfurt), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), Asia Pacific (Seoul), South America (Sao Paulo), and China (Beijing).

AWS GovCloud (US) is an isolated AWS Region designed to allow US government agencies and customers to move workloads into the cloud by helping them meet certain regulatory and compliance requirements. The AWS GovCloud (US) framework allows US government agencies and their contractors to comply with U.S. International Traffic in Arms Regulations (ITAR) regulations as well as the Federal Risk and Authorization Management Program (FedRAMP) requirements. AWS GovCloud (US) has received an Agency Authorization to Operate (ATO) from the US Department of Health and Human Services (HHS) utilizing a FedRAMP accredited Third Party Assessment Organization (3PAO) for several AWS services.

The AWS GovCloud (US) Region provides the same fault-tolerant design as other regions, with two Availability Zones. In addition, the AWS GovCloud (US) region is a mandatory AWS Virtual Private Cloud (VPC) service by default to create an isolated portion of the AWS cloud and launch Amazon EC2 instances that have private (RFC 1918) addresses. More information about GovCloud is available on the AWS website: http://aws.amazon.com/govcloud-us/
For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider:

Extended downtime

The collab9 solution is deployed as active-active across datacenters with multiple redundancy options. The system will automatically failover to secondary datacenter to prevent extended downtime. A contingency plan is developed and tested to eliminate extended downtime.

Suffers an unrecoverable loss of data

The collab9 solution is backed up and then replicated between two datacenters. The backups are also verified for recoverability. As a Voice over IP system, the only customer data stored is voicemail. All configurations are either backed up across datacenters or deployed in active-active manner to avoid unrecoverable loss of data.

Offeror experiences a system failure

The collab9 solution is deployed across redundant datacenters with active-active configuration to prevent system failure. There is redundancy within the datacenter and across the datacenters to prevent system failure.

Ability to recover and restore data within 4 business hours in the event of a severe system outage

Since the system is deployed as active-active across two datacenters, the system automatically fails over to prevent severe system outage. A business impact analysis is developed and used in contingency planning that identifies the critical system and how they would be recovered within 4 business hours.

Describe Recovery Point Objective (RPO) and Recovery Time Objective (RTO)

Working directly with mission/business process owners, departmental staff, managers, and other stakeholders, colllab9 has estimated the downtime factors for consideration as a result of a disruptive event.

- Maximum Tolerable Downtime (MTD): The MTD represents the total amount of time leaders/managers are willing to accept for a mission/business process outage or disruption and includes all impact considerations. Determining MTD is important because it could leave continuity planners with imprecise direction on (1) selection of an appropriate recovery method, and (2) the depth of detail which will be required when developing recovery procedures, including their scope and content.

- Recovery Time Objective (RTO): RTO defines the maximum amount of time that a system resource can remain unavailable before there is an unacceptable impact on other system resources, supported mission/business processes, and the MTD. Determining the information system resource RTO is important for selecting appropriate technologies that are best suited for meeting the MTD.

- Recovery Point Objective (RPO): The RPO represents the point in time, prior to a disruption or system outage, to which mission/business process data must be recovered (given the most recent backup copy of the data) after an outage.

The table below identifies the MTD, RTO, and RPO (as applicable) for the organizational mission/business processes that rely on collab9 hosted collaboration solution. Values for MTDs and RPOs are expected to be specific time frames, identified in hourly increments (i.e., 8 hours, 36 hours, 97 hours, etc.).

Mission/Business Process	MTD	RTO	RPO
Voice over IP Systems (Per Customer)	8 Hours	4 Hours	24 Hours
PSTN Services - Local, Long Distance, International, 911 Dialing	4 Hours	1 Hour	Not Applicable
Datacenter Connectivity	4 Hours	1 Hour	Not Applicable
Customer Provisioning	48 Hours	8 Hours	24 Hours
Authentication Services	48 Hours	8 Hours	24 Hours
Security and Compliance Systems	24 Hours	8 Hours	24 Hours
Monitoring and Management Systems	48 Hours	8 Hours	24 Hours

1. Voice over IP Services: These services are deployed in redundant manner across two datacenters. Primary voice applications like unified communications manager, unity connection voicemail, presence and contact center servers support high availability over wide area network. So this allows for tolerable downtime for the following reasons:
   a. Customers are connected to both datacenters, if the voice services are down in one datacenter; they are automatically routed to the second datacenter. Collab9 can control which datacenter will be primary for a particular customer.
   b. There are redundant links between datacenters, so customer traffic can be route between datacenter even when services are down in one of the datacenter
   c. Voice services, which are not highly available over WAN, are, restored from backup.

2. PSTN Services: These services are deployed across the datacenter and are highly available. Both Inbound are active passive with LA being primary and CH being secondary, which outbound are can be configured active-active or active-passive

3. Datacenter Connectivity: Customers are connected to both datacenters with following options:
   a. Using MPLS, they can connect to both datacenters simultaneously
   b. Using MPLS, they can connect to one datacenter and do IPSEC VPN to second datacenter
   c. Using IPSEC VPN, they can connect to both datacenters

4. Customer Provisioning: Cisco unified domain manager, provisioning system, is deployed in active-standby mode across datacenter.

5. Authentication Services: Following authentication services are deployed active-active across datacenters:
   a. Cisco ACS
   b. RSA Authentication Manager for 2-factor authentication
   c. Active Directory

6. Security and Compliance Systems would be rebuilt from backup

7. Monitoring and Management Systems would be Rebuilt from backup

B. 8.8.2 Methodologies for Backup and Restore Services

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as it's Cloud Service Provider:

The AWS platform enables a lightweight approach to backup and recovery due, in part, to the following characteristics:

- Computers are now virtual abstract resources instantiated via code rather than being hardware based.
- Capacity is available at incremental cost rather than up-front cost.
- Resource provisioning takes place in minutes, lending itself to real-time configuration.
- Server images are available on demand, can be maintained by an organization, and can be activated immediately.

These characteristics offer customers opportunities to recover deleted or corrupted data with less infrastructure overhead.

Protecting Configurations Rather Than Servers

The Amazon Elastic Compute Cloud (Amazon EC2) service enables the backup and recovery of a standard server, such as a web server or application server, so that customers can focus on protecting their configuration and the state of data rather than the server itself. This set of data is much smaller than the aggregate set of server data, which typically includes various application files, operating system files, temporary files, and so on. This change of approach means that regular nightly incremental or weekly full backups can take far less time and consume less storage space.

When a compute instance is started in Amazon EC2, it is based upon an Amazon Machine Image (AMI) and can also connect to existing storage volumes—for example, Amazon Elastic Block Store (Amazon EBS). In addition, when launching a new instance, it is possible to pass user data to the instance that can be accessed internally as dynamic configuration parameters.

A sample workflow is as follows:

- Launch a new instance of a web server, passing it the identity of the web server and any security credentials required for initial setup. The instance is based upon a pre-built AMI that contains the operating system and relevant web server application (e.g., Apache or IIS).
- Upon startup, a boot script accesses a designated and secured Amazon Simple Storage Service (Amazon S3) bucket that contains the specified configuration file(s).
- The configuration file contains various instructions for setting up the server (e.g., web server parameters, locations of related servers, additional software to install, and patch updates).
- The server executes the specified configuration and is ready for service. An open-source tool for performing this process called Cloud-Init is installed on Amazon Linux AMIs and is also available for a number of other Linux distributions.

Figure 1 depicts a traditional backup approach and **Figure 2** depicts an Amazon EC2 backup approach.

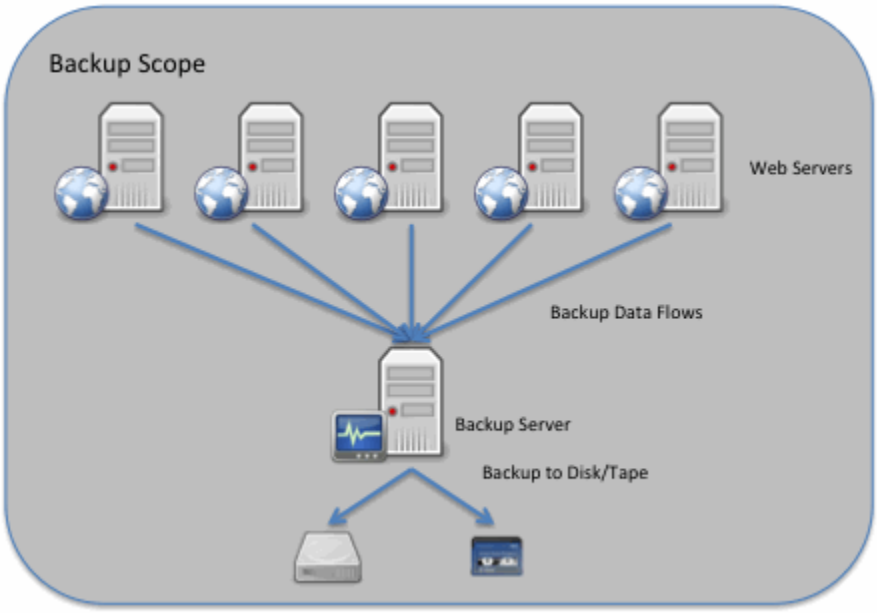

Figure 1 – Traditional Backup Approach

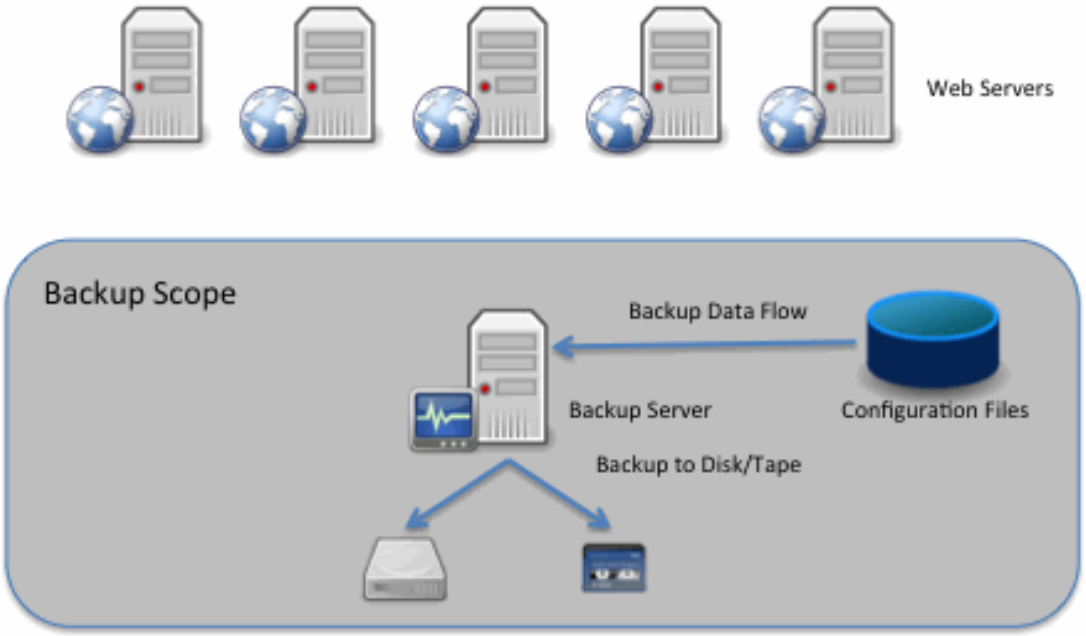

Figure 2 – Amazon EC2 Backup Approach

In this case, there is no need to back up the server itself. The relevant configuration is contained in the combination of the AMI and the configuration file(s). So, the only components requiring backup and recovery are the AMI and configuration file(s).

Amazon Machine Image (AMI)

AMIs that customers register are automatically stored in their account using Amazon EBS snapshots. These snapshots reside in Amazon S3 and are highly durable. This means that the underlying storage mechanism for the AMIs is protected from multiple failure scenarios.

It is also possible to share AMIs between separate AWS accounts. Consequently, customers can create totally independent copies of the AMI by:

- Sharing the original AMI to another specified AWS account controlled by the customer.
- Starting a new instance based upon the shared AMI.
- Creating a new AMI from that running instance.

The new AMI is then stored in the second account and is an independent copy of the original AMI. Of course, customers can also create multiple copies of the AMI within the same account.

Configuration Files

Customers use a variety of version management approaches for configuration files, and they can follow the same regime for the files used to configure their Amazon EC2 instances. For example, a customer could store different versions of configuration files in designated locations and securely control them like any other code. That customer could then back up these code repositories using the appropriate backup cycle (e.g., daily, weekly, monthly) and snapshots to protected locations. Furthermore, customers can use Amazon S3 to store their configuration files, taking advantage of the durability of the service in addition to backing up the files to an alternate location on a regular basis.

Database and File Servers

Backing up data for database and file servers differs from the web and application layers. In general, database and file servers contain larger amounts of business data (tens of GB to multiple TB) that must be retained and protected at all times. In these cases, customers can leverage efficient data movement techniques such as snapshots to create backups that are fast, reliable, and space efficient.

For databases that are built upon RAID sets of Amazon EBS volumes (and have total storage less than 1 TB), an alternative backup approach is to asynchronously replicate data to another database instance built using a single Amazon EBS volume. While the destination Amazon EBS volume will have slower performance, it is not being used for data access and can be easily snapshotted to Amazon S3 using the Amazon EBS snapshot capability.

Disaster Recovery

The AWS cloud supports many popular DR architectures from “pilot light” environments that are ready to scale up at a moment’s notice to “hot standby” environments that enable rapid failover. With data centers in 12 regions around the world (4 in the United States), AWS provides a set of cloud-based DR services that enable rapid recovery of IT infrastructure and data.

General Disaster Recovery/COOP and Backup Requirements and Issues

Some of the minimum needs and requirements in a traditional DR approach are as follows.

- Facilities to house additional infrastructure, including power and cooling.
- Security to ensure the physical protection of assets.
- Suitable capacity to scale the environment.
- Support for repairing, replacing, and refreshing the infrastructure.
- Contractual agreements with an Internet Service Provider (ISP) to provide Internet connectivity that can sustain bandwidth utilization for the environment under a full load.
- Network infrastructure such as firewalls, routers, switches, and load balancers.

- Enough server capacity to run all mission-critical services, including storage appliances for the supporting data, and servers to run applications and back-end services such as user authentication, Domain Name System (DNS), Dynamic Host Configuration Protocol (DHCP), monitoring, and alerting.

AWS Capabilities for DR/COOP/Backup Solutions

With AWS, customers can eliminate the need for additional physical infrastructure, off-site data replication, and upkeep of spare capacity. AWS uses distinct and geographically diverse Availability Zones (AZs) that are engineered to be isolated from failures in other AZs. This innovative and unique AWS feature enables customers to protect applications from the failure of a single location, resulting in significant cost savings and increased agility to change and optimize resources during a DR scenario.

AWS offers the following high-level DR capabilities:

- **Fast Performance**: Fast, disk-based storage and retrieval of files.
- **No Tape**: Eliminate costs associated with transporting, storing, and retrieving tape media and associated tape backup software.
- **Compliance**: Minimize downtime to avoid breaching Service Level Agreements (SLAs).
- **Elasticity**: Add any amount of data, quickly. Easily expire and delete without handling media.
- **Security**: Secure and durable cloud DR platform with industry-recognized certifications and audits.
- **Partners**: AWS solution providers and system integration partners to help with deployments.

Solution Use Cases

AWS can enable customers to cost-effectively operate multiple DR strategies. **Figure 1** shows a spectrum of scenarios—"backup & restore," "pilot light," "warm standby," and "multi-site"—arranged by how quickly a system can be available to users after a DR event.

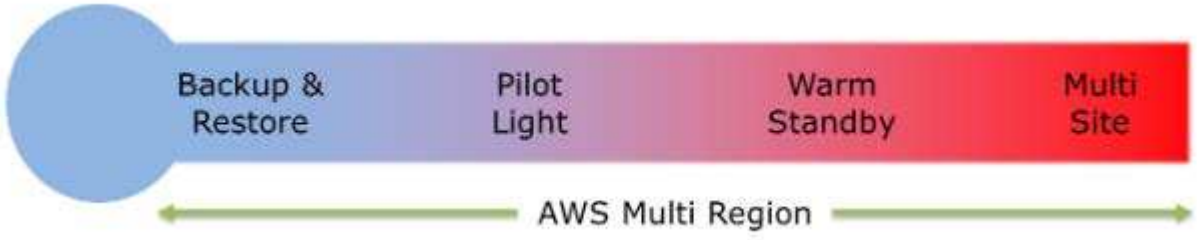

Figure 3 – Spectrum of DR Options.

Each DR option is discussed in more detail below:

- **Backup and Restore**: In most traditional environments, data is backed up to tape and sent off-site regularly. Recovery time will be the longest using this method, and lack of automation leads to increased costs. Using Amazon Simple Storage Service (Amazon S3) is ideal for backup data, as it is designed to provide 99.999999999% durability of objects over a given year. Transferring data to and from Amazon S3 is typically done via the network, and it is therefore accessible from any location. Also, with AWS Storage Gateway, customers can automatically back up on-premises data to Amazon S3.

> Amazon S3 is designed to provide 99.999999999% durability of objects over a given year. This durability level corresponds to an average annual expected loss of 0.000000001% of objects.

- **Pilot Light for Simple Recovery into AWS Warm Standby Solution**: The idea of the pilot light is an analogy that comes from the gas heater. In a gas heater, a small idle flame that's always on can quickly ignite the entire furnace to heat up a house as needed. This scenario is analogous to a backup and restore scenario; however, customers must ensure that they have the most critical core elements of their system already configured and running in AWS (the pilot light). When the time comes for recovery, customers would rapidly provision a full-scale production environment around the critical core.
- **Warm Standby Solution in AWS**: The term "warm standby" is used to describe a DR scenario in which a scaled-down version of a fully functional environment is always running in the cloud. It further decreases recovery time because, in this case, some services are always running. By identifying business-critical systems, customers could fully duplicate these systems on AWS and have them always on.
- **Multi-Site Solution Deployed on AWS and On-Site**: A multi-site solution runs in AWS as well as on a customer's existing on-premise infrastructure in an active-active configuration. During a disaster situation, an organization can simply send all traffic to AWS servers, which can scale to handle their full production load.

DR Resources

There are multiple resources to help organizations start using AWS for a DR/COOP and backup solution:

- Read the AWS whitepaper Using AWS for Disaster Recovery
- Read the Forrester whitepaper File Storage Costs Less in the Cloud than In-House
- Review a sample AWS DR architecture
- Review more information on AWS DR capabilities and approaches

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider:

Method of data backups

- Data is backed up as part of server snapshots for Windows and Linux servers
- Appliances are backed up to a middle server which is then backed up using snapshot
- All virtual servers are backed up using snapshots and then copied to EMC data domain for online backups
- Data domain replicates the backup data to the secondary datacenter
- Same process is repeated at the secondary datacenter and data is replicated to primary

Method of server image backups

VMware snapshots are used for server image backups. VMware data protection server is used for backups.

Digital location of backup storage (secondary storage, tape, etc.)

Backups are stored on EMC data domains and replicated to secondary datacenter for offsite retention and long term storage.

Alternate data center strategies for primary data centers within the continental United States

Collab9 has two datacenters, one in Los Angeles and other in Chicago. They are backup for each other. In addition to that, all the services that support active-active deployment are deployed across the datacenter and the ones which do not have this capability are deployed in a primary datacenter and then replicated to alternate for contingency planning.

8.9 Data Protection

A. 8.9.1 Encryption

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, AWS customers retain control and ownership of their data, and all data stored by AWS on behalf of customers has strong tenant isolation security and control capabilities. Customers should consider the sensitivity of their data and decide if and how they will encrypt data while it is in transit and while it is at rest.

Securing Data at Rest

There are several options for encrypting data at rest, ranging from completely automated AWS encryption solutions to manual, client-side options. Choosing the right solutions depends on which AWS cloud services are being used and customer requirements for key management. Information on protecting data at rest using encryption can be found in the Protecting Data Using Encryption section of the Amazon Simple Storage Service (Amazon S3) Developer Guide.

Additionally, the Securing Data at Rest with Encryption whitepaper provides an overview of the options for encrypting data at rest in AWS cloud services. It describes these options in terms of where encryption keys are stored and how access to those keys is controlled. Both server-side and client-side encryption methods are discussed with examples of how each can be accomplished in various AWS cloud services.

Securing Data in Transit

Protecting data in transit when running applications in the cloud involves protecting network traffic between clients and servers and network traffic between servers.

Services from AWS provide support for both Internet Protocol Security (IPSec) and Secure Sockets Layer/Transport Layer Security (SSL/TLS) for protection of data in transit. IPSec is a protocol that extends the IP protocol stack, often in network infrastructure, and allows applications on upper layers to communicate securely without modification. SSL/TLS, on the other hand, operates at the session layer, and while there are third-party SSL/TLS wrappers, it often requires support at the application layer as well.

The AWS Security Best Practices whitepaper provides greater detail on how to protect data in transit and at rest in the AWS cloud.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, Collab9 uses FIP140-2 compliant encryption technologies for encryption. Data in transit can be secured using the following methods:

1. IPSEC SSL VPN
2. SRTP for voice packets
3. Secure SIP Signaling using TLS

Collab9 only has customer voicemails as part of customer data. The voicemails are not encrypted. The systems are secured using compensating controls.

B. 8.9.2 Agreements

Strategic Communications is willing to entertain any other agreement or Business Associate Agreement (as is typically the case for HIPAA and CJIS related engagements), assuming that said agreement does not conflict or breach any tenets of existing agreements or exceeds the capabilities of our Service providers.

C. 8.9.3 Use of Data

Strategic Communications commits that it will only use data for the purposes defined in the Master Agreement, participating addendums, or related service level agreements. Strategic Communications is not and will not sell, participate in data mining or otherwise distribute the government data or government related data. It further commits that any commitments made by Strategic Communications

shall be binding upon any of its subcontractors including data mining, distribution, or resale of above said data.

8.10 Service Level Agreements (SLAs)

A. 8.10.1 SLA Negotiability

The SLAs we offer for services we directly deploy are fully negotiable depending on a Purchasing Entity's special requirements.

B. 8.10.2 Sample SLA

Strategic Communications has included the following sample Service Level Agreements which define performance and other operating parameters within which the infrastructure must operate to meet IT System and Purchasing Entity's requirements:

- Attachment SC-10: Strategic Communications Managed Services SLA
- Attachment SC-11: Amazon Web Services (AWS) SLAs
- Attachment SC-12: Collab9 Cloud Services SLA

8.11 Data Disposal

As stated in 8.5.1, all of Strategic Communications' IaaS, PaaS and SaaS offerings provide mechanism to delete their data. Strategic Communications will be able to sanitize all data upon request, in accordance with NIST Special Publications 800-88 'Guidelines for Media Sanitization. Strategic Communications exceeds the requirement to sanitize data by providing additional capabilities as described below.

- Customers can use services such Multi-Object Delete to delete large numbers of objects from services such as Amazon S3. This feature allows customers to send multiple object keys in a single request to speed up their deletes. This service is offered free of charge as part of the Amazon S3 service.

- Customers can use the Object Expiration feature to remove objects from their buckets after a specified number of days. With Object Expiration customers can define the expiration rules for a set of objects in their bucket through the Lifecycle Configuration policy that they apply to the bucket. Each Object Expiration rule allows customers to specify a prefix and an expiration period.

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its' Cloud Service Provider it is important that customers understand some important basics regarding data ownership and management in the cloud shared responsibility model:

1. Customers continue to own their data.
2. Customers choose the geographic location(s) in which to store their data—it does not move unless the customer decides to move it.
3. Customers can download or delete their data whenever they like.
4. Customers should consider the sensitivity of their data, and decide if and how to encrypt the data while it is in transit and at rest.

AWS provides customers with the ability to delete their data. However, AWS customers retain control and ownership of their data, and it is the customer's responsibility to manage their data.

AWS Storage Device Decommissioning

When a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals. AWS uses the techniques detailed in DoD 5220.22-M ("National Industrial Security Program Operating Manual ") or NIST 800-88 ("Guidelines for Media Sanitization") to destroy data as part of the decommissioning process. All decommissioned magnetic storage devices are degaussed and physically destroyed in accordance with industry-standard practices.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, Collab9 restricts access to external removable hard disk drives, which is the only type of media within collab9's secure information system boundary. The collab9 system is fully virtualized. The information system does not have the capability for attaching any other type of digital media, such as CD/DVD, portable USB hard disk drives or thumb drives, tape drives, and optical drives. External hard disk drives in SAN storage are part of SAN internal RAID sets, so individual drives do not have data in a format that can be reconstructed. The external removable hard disk drives are defined as the only type of media that would require media access protection.

When media is removed (an external removable hard disk drive is removed from the SAN), an authorized collab9 individual logs the transaction, receives internal security approval, wraps/labels the drive, and then stores it inside a container marked "For Destruction" within collab9's access-controlled cage within the data center. Collab9 uses a third-party contractor's asset disposition services annually for all media transport and destruction services.

8.12 Performance Measures and Reporting

A. 8.12.1 Guaranteed Uptime of Greater Than 99.5%

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as it's Cloud Service Provider:

AWS currently provides Service Level Agreements (SLAs) for several products and their respective SLA targets for guaranteed reliability and uptime have been provided below. Due to the rapidly evolving nature of AWS's product offerings, SLAs are best reviewed directly on the AWS website but copies have been provided in Attached SC-11, AWS SLAs.

Service	Guaranteed reliability and uptime percentage	SLA Reference
Amazon EC2	99.95%	Attachment SC-11 – AWS SLAs
Amazon S3	99.9%	Attachment SC-11 – AWS SLAs
Amazon CloudFront	99.9%	Attachment SC-11 – AWS SLAs
Amazon Route 53	100%	Attachment SC-11 – AWS SLAs
Amazon RDS	99.95%	Attachment SC-11 – AWS SLAs

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider:

Collab9's Availability goal is 99.92%. This is achieved via a multi-layer redundancy architecture and elimination of all single points of failure within collab9's data centers. Collab9 operates two geo-redundant data centers located in Chicago and Los Angeles. Each data center is equipped with internal redundancies for power and all other requirements for sustained operation. Collab9 data centers are interconnected utilizing redundant high bandwidth links which provide internal load-balancing between applications, cross application replication, and automatic failover for traffic routing if a customer's link to one data center is unavailable. Customer applications delivering voice, voicemail and collaboration services are also deployed with full 1:1 redundancy across each data center. SIP based PSTN services ingress and egress via redundant session border controllers located within each data center and are configured for load-balancing and automatic failover in the event of hardware, network or data center failure.

B. 8.12.2 Standard Uptime Service and Related SLA Criteria

Strategic Communications has included the following sample Service Level Agreements which define performance and other operating parameters within which the infrastructure must operate to meet IT System and Purchasing Entity's requirements:

- Attachment SC-10: Strategic Communications Managed Services SLA
- Attachment SC-11: Amazon Web Services (AWS) SLAs
- Attachment SC-12: Collab9 Cloud Services SLA

C. 8.12.3 Support

Strategic Communications offers Customer Service Representative(s) available by phone or email, as discussed in Section 8.4.2. We have an established Help Desk at our corporate headquarters in Louisville, KY which provides telephone support and is able to support the NASPO Contract requirements of 7:00 AM to 6:00PM Monday – Sunday for applicable time zones. Our Help Desk receives and responds to support requests. Our Help Desk is available via telephone 24 hours a day, 7 days a week (24/7). All calls made after hours are captured and assigned to a technician the next

business day. Strategic Communications tracks all Help Desk Tickets and is able to provide reports which give response statistics for service calls.

D. 8.12.4 Remedies for Failing to Meet Response/Fix Time

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, Strategic Communications has provided copies of all applicable AWS SLA's offered in attachment SC-11, "AWS SLAs" for consequence/SLA remedy review and service credit policy.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, Strategic Communications has provided copies of all applicable Collab9 SLA's offered in attachment SC-12, "Colab9 SLA" for consequence/SLA remedy review.

E. 8.12.6 Procedures for Planned Downtime

Maintenance is categorized as "Regular Maintenance" and "Urgent Maintenance."

Regular Maintenance refers to hardware, software, and system configuration changes/upgrades to improve performance, increase capacity, and/or promote security. Regular Maintenance may temporarily degrade the quality of the Service and it may cause outages. Such effects related to Regular Maintenance will not give rise to service credits under this SLA. Regular Maintenance can be performed any evening between the hours of 10:00 PM and 4:00 AM Pacific.

Emergency Maintenance refers to efforts to correct Contractor infrastructure conditions likely to cause a severe degradation in service and/or material service outage, thereby requiring immediate attention. Emergency Maintenance may degrade the quality of the Service and it may cause outages. Such effects related to Emergency Maintenance will not give rise to service credits under this SLA. Contractor may undertake Emergency Maintenance at any time deemed necessary and will provide notice of Emergency Maintenance to Customer as soon as is commercially practicable under the circumstances.

F. 8.12.7 Consequences for Not Meeting Disaster Recovery Metrics

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, Strategic Communications has provided copies of all applicable AWS SLA's offered in attachment SC-11, "AWS SLAs" for consequence/SLA remedy review and service credit policy.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, Strategic Communications has provided copies of all applicable Collab9 SLA's offered in attachment SC-12, "Colab9 SLA" for consequence/SLA remedy review.

G. 8.12.8 Performance Metrics Sample Reports

A sample performance report for one of Strategic Communications' cloud offerings has been provided in **Attachment SC-16**.

H. 8.12.9 Report Print Ability

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, the following applies:

The AWS Management Console is a single destination for managing all AWS resources, from Amazon Elastic Compute Cloud (Amazon EC2) instances to Amazon DynamoDB tables. Use the AWS Management Console to perform any number of tasks, from deploying new applications to monitoring the health of applications. The AWS Management Console also enables customers to manage all aspects of their AWS account, including accessing monthly spending by service, managing security credentials, or even setting up new AWS Identity and Access Management (AWS IAM) users. The AWS Management Console supports all AWS regions and lets customers provision and monitor usage of resources across multiple regions.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, Call Detail Record (CDR) reports are provided to each purchasing entity on a monthly basis in file format. The standard CDR retention time for Collab9 is 90 days.

I. 8.12.10 On-Demand Deployment Support 24x365

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, AWS services are available on-demand for deployment, 24x365.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider this requirement is Not Applicable.

J. 8.12.11 Scale-Up and Scale-Down

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as it's Cloud Service Provider, AWS services can be scaled-up or scaled-down, 24x365.

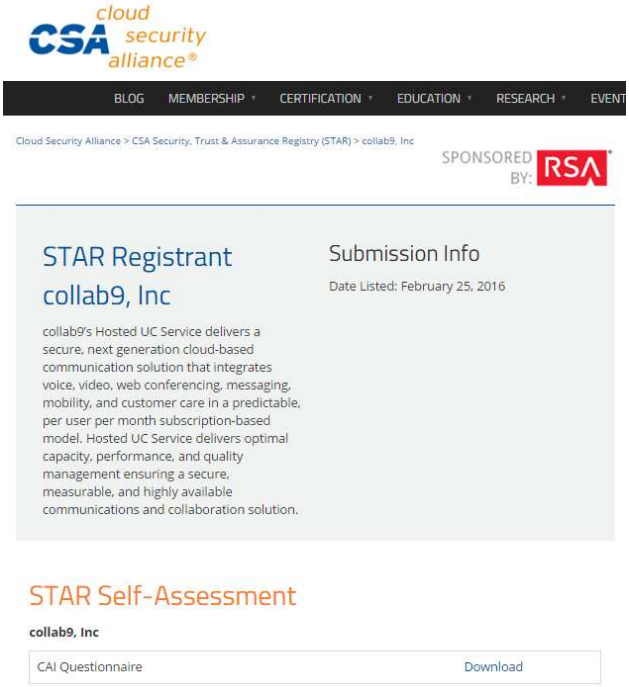
For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, this requirement is Not Applicable as scale-up and scale-down typically apply to IaaS and PaaS solutions.

8.13 Cloud Security Alliance

A. Completion of a CSA STAR Self-Assessment, as described in Section 5.5.5

- **Amazon Web Services (AWS) Cloud Offerings:** AWS has submitted the SCA STAR Self-Assessment and is compliant with Level 1 CSA STAR Registry Self-Assessment.

- **Collab9 Cloud Offerings:** Strategic Communications' Collab9 Cloud Offerings are compliant with the CSA STAR Registry requirements and Collab9 has been registered in the CSA STAR Registry as of February 25, 2016.



B. Completion of Exhibits 1 and 2 to Attachment B.

- **Amazon Web Services (AWS) Cloud Offerings:** Strategic Communications has included AWS's Responses to the CAIQ (v3) within **Attachment SC-13.** Attachment SC-13 is AWS's Risk and Compliance Whitepaper. The CAIQ responses are found on Pages 26-62. All of the AWS self-assessed assertions within the CSA STAR Registry Self-Assessment are backed by independent, third party audits across multiple compliance programs.

- **Collab9 Cloud Offerings:** Collab9 has submitted the Census Assessments Initiative Questionnaire (CAIQ) to Cloud Security Alliance as of February 25, 2016 and registered under CSA STAR Self-Assessment. Collab9's CAIQ is included as **Attachment SC-5**.

C. Completion of a CSA STAR Attestation, Certification, or Assessment.

- **Amazon Web Services (AWS) Cloud Offerings:** AWS has submitted the CSA STAR Self-Assessment and is compliant with Level 1 CSA STAR Registry Self-Assessment. All of the AWS self-assessed assertions within the CSA STAR Registry Self-Assessment are backed by independent, third party audits across multiple compliance programs. Amazon continues to assert we raise the bar on CSA's "attestation" and "certification" program.

  Per the CSA definitions, AWS aligns with Level 2 via the determinations in third party audits for SOC and ISO:

  Level 2 Attestation is based on SOC2, which can be requested under NDA by submitted a request online at: http://aws.amazon.com/compliance/contact/. The SOC 2 report audit attests that AWS has been validated by a third party auditor to confirm that AWS' control objectives are appropriately designed and operating effectively.

  Level 2 Certification is based on ISO 27001:2013. AWS's ISO 27001:2013 certification is provided as **Attachment SC-14**.

- **Collab9 Cloud Offerings:** Collab9 has submitted the CSA STAR Self-Assessment.

D. Completion CSA STAR Continuous Monitoring.

- **Amazon Web Services (AWS) Cloud Offerings:** AWS has completed CSA STAR Continuous Monitoring.

- **Collab9 Cloud Offerings:** Collab9 has completed CSA STAR Continuous Monitoring.

8.14 Service Provisioning

A. 8.14.1 Rush or Emergency Services

In the event of rush or emergency service needs, Strategic Communications implements our escalation procedures. These procedures are discussed in length in Section 8.4.1. Please refer to this section for a detailed description of escalation procedures.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, Collab9 can process rush requests depending on the complexity of the request. Collab9 refers to its standard project plan which accounts for the collection of data, implementation of connectivity circuits and PSTN, etc. Assuming that the rush request comes in without the need for circuits, connectivity, PSTN, all data required for the collab9 implementation has been collected and vetted, and the infrastructure is appropriate for a collab9 solution, collab9 can implement said rush request in a fifteen (15) to thirty (30) day period from the receipt of a Purchase Order.

B. 8.14.2 Lead Time for Provisioning Solutions

Amazon Web Services (AWS) Cloud Solutions

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, initial customer account creation upon purchase order receipt generally takes 3 – 7 business days to provision. Once appropriate accounts have been created, customer access is provided and all AWS services from that points are on-demand and self-service and generally delivered within minutes of request.

Collab9 Cloud Solutions

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, once a purchase order is received along with all required user/customer information pertinent to the total engagement, the typical lead time to provision services is 15-30 days. If additional site hardware or private circuits are required, the overall project timeline and commencement of final testing will be dependent upon the individual lead times for required hardware and/or circuit installation. Additional lead time may be required for large scale deployments, those deployments requiring a mutually agreed to phase approach, or when extensive customization is required.

8.15 Back Up and Disaster Plan

A. 8.15.2 Ability to apply legal retention periods and disposition

For Strategic Communications' IaaS, PaaS and SaaS offerings, each purchasing entity has the ability to individually prescribe legal retention periods and disposition requirements.

B. 8.15.3 Disaster Recovery Risks and Potential Mitigation Strategies

Risk Management

A risk is an event or condition that, if it occurs, could have a positive or negative effect on a project's objectives. Risk Management is the process of identifying, assessing, responding to, monitoring, and reporting risks. This Risk Management Plan defines how risks associated with the NASPO Contract will be identified, analyzed, and managed. It outlines how risk management activities will be performed, recorded, and monitored throughout the lifecycle of the project and provides templates and practices for recording and prioritizing risks.

Risk Management Process. The project manager working with the project team and project sponsors will ensure risks are actively identified, analyzed, and managed throughout the life of the project. Risks will be identified as early as possible in the project so as to minimize their impact.

- **Risk Identification.** Risk identification will involve the project team, appropriate stakeholders, and will include an evaluation of environmental factors, organizational

culture and the project management plan including the project scope. This process requires management to identify risks within its areas of responsibility and to implement appropriate measures designed to address those risks. Careful attention will be given to the project deliverables, assumptions, constraints, cost/effort estimates, resource plan, and other key project documents. A Risk Management Log will be generated and updated as needed and will be stored electronically.

- **Risk Analysis.** All risks identified will be assessed to identify the range of possible project outcomes. Qualification will be used to determine which risks are the top risks to pursue and respond to and which risks can be ignored. Findings and recommendations resulting from these assessments are categorized and delivered to leadership.

    - Risk Probability
        - High – Greater than 70% probability of occurrence
        - Medium – Between 30% and 70% probability of occurrence
        - Low – Below 30% probability of occurrence

    - Risk Impact
        - High – Risk has the potential to greatly impact project cost, project schedule or performance
        - Medium – Risk has the potential to slightly impact project cost, project schedule or performance
        - Low – Risk has relatively little impact on cost, schedule or performance

- **Quantitative Risk Analysis.** Analysis of risk events that have been prioritized using the qualitative risk analysis process and their effect on project activities are estimated, a numerical rating applied to each risk based on this analysis, and then documented in this section of the risk management plan.

- **Risk Response Planning.** Each major risk (those falling in the Red & Yellow zones) is assigned to a project team member for monitoring purposes. For each major risk, one of the following approaches is selected to address it:
    - Avoid – eliminate the threat by eliminating the cause
    - Mitigate – Identify ways to reduce the probability or the impact of the risk
    - Accept – Nothing will be done
    - Transfer – Make another party responsible for the risk (buy insurance, outsourcing, etc.)

C. 8.15.4 Infrastructure Supporting Multiple Data Centers

Amazon Web Services

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, the following applies:

Amazon's infrastructure has a high level of availability and provides customers the features to deploy a resilient IT architecture. AWS has designed its systems to tolerate system or hardware failures with minimal customer impact. Data center Business Continuity Management at AWS is under the direction of the Amazon Infrastructure Group.

AWS Availability

Data centers are built in clusters in various global regions. All data centers are online and serving customers; no data center is "cold." In case of failure, automated processes move customer data traffic away from the affected area. Core applications are deployed in an N+1 configuration, so that in the event of a data center failure, there is sufficient capacity to enable traffic to be load-balanced to the remaining sites.

AWS provides the Purchasing Entity with the flexibility to place instances and store data within multiple geographic regions as well as across multiple availability zones within each region. Each availability zone is designed as an independent failure zone. This means that availability zones are physically separated within a typical metropolitan region and are located in lower risk flood plains (specific flood zone categorization varies by Region). In addition to discrete uninterruptable power supply (UPS) and onsite backup generation facilities, they are each fed via different grids from independent utilities to further reduce single points of failure. Availability zones are all redundantly connected to multiple tier-1 transit providers.

Each Purchasing Entity should architect AWS usage to take advantage of multiple regions and availability zones. Distributing applications across multiple availability zones provides the ability to remain resilient in the face of most failure modes, including natural disasters or system failures.

AWS Fault-Tolerant Design

Amazon's infrastructure has a high level of availability and provides the Purchasing Entity with the capability to deploy a resilient IT architecture. AWS has designed its systems to tolerate system or hardware failures with minimal customer impact.

Data centers are built in clusters in various global regions. All data centers are online and serving customers; no data center is "cold." In case of failure, automated processes move customer data traffic away from the affected area. Core applications are deployed in an N+1 configuration, so that in the event of a data center failure, there is sufficient capacity to enable traffic to be load-balanced to the remaining sites.

AWS provides the flexibility to place instances and store data within multiple geographic regions as well as across multiple availability zones within each region. Each availability zone is designed as an independent failure zone. This means that availability zones are physically separated within a typical metropolitan region and are located in lower risk flood plains (specific flood zone categorization varies by region). In addition to utilizing discrete uninterruptable power supply (UPS) and onsite backup generators, they are each fed via different grids from independent utilities to further reduce single points of failure. Availability zones are all redundantly connected to multiple tier-1 transit providers.

The Purchasing Entity should architect AWS usage to take advantage of multiple regions and availability zones. Distributing applications across multiple availability zones provides the ability to remain resilient in the face of most failure scenarios, including natural disasters or system failures. However, the Purchasing Entity should be aware of location-dependent privacy and compliance requirements, such as the EU Data Privacy Directive. Data is not replicated between regions unless proactively done so by the customer, thus allowing customers with these types of data placement and privacy requirements the ability to establish compliant environments. It should be noted that all communications between regions is across public Internet infrastructure; therefore, appropriate encryption methods should be used to protect sensitive data.

As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US), EU (Ireland), EU (Frankfurt), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), Asia Pacific (Seoul), South America (Sao Paulo), and China (Beijing).

AWS GovCloud (US) is an isolated AWS Region designed to allow US government agencies and customers to move workloads into the cloud by helping them meet certain regulatory and compliance requirements. The AWS GovCloud (US) framework allows US government agencies and their contractors to comply with U.S. International Traffic in Arms Regulations (ITAR) regulations as well as the Federal Risk and Authorization Management Program (FedRAMP) requirements. AWS GovCloud (US) has received an Agency Authorization to Operate (ATO) from the US Department of Health and Human Services (HHS) utilizing a FedRAMP accredited Third Party Assessment Organization (3PAO) for several AWS services.

The AWS GovCloud (US) Region provides the same fault-tolerant design as other regions, with two Availability Zones. In addition, the AWS GovCloud (US) region is a mandatory AWS Virtual Private Cloud (VPC) service by default to create an isolated portion of the AWS cloud and launch Amazon EC2 instances that have private (RFC 1918) addresses. More information about GovCloud is available on the AWS website: http://aws.amazon.com/govcloud-us/

Collab9

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, the following applies:

Disaster risks include data center hardware failure, natural disasters that threaten the operation of an entire data center, loss of connectivity and loss of data. Collab9 mitigates risks posed to data center operation through the use of intra and inter data center redundancy, geographical separation of services, automated replication of data between data centers, and availability of all services at each data center location.

Network connectivity redundancy or local site service recovery is also incorporated into the overall solution to ensure a circuit outage will not affect service delivery to a customer location.

Risk to data loss is mitigated through the utilization of application clusters and real-time replication of data across data centers. Disaster recovery backups are also conducted at regular intervals as required by purchasing entity RPO.

Collab9 currently operates two geo-redundant data centers located in Chicago and Los Angeles. Collab9 data centers are interconnected utilizing redundant high bandwidth links which provide internal load-balancing between applications, cross-application replication, and automatic failover for traffic routing if a customer's link to one data center is unavailable. Customer applications delivering voice, voicemail and collaboration services are also deployed with full 1:1 redundancy across each data center in an active/active configuration. Customer IP Phones, devices and applications are configured to automatically failover to an active application server the primary subscriber becomes unavailable. The Purchasing Entity's site connectivity to collab9 data centers is facilitated via high availability MPLS circuits with an option for backup connectivity over IPsec VPN over internet or a second MPLS circuit. BGP routing is utilized for route failover in the even a circuit outage is experienced.

SIP based PSTN services ingress and egress via redundant session border controllers located within each data center and are configured for load-balancing and automatic failover in the event of hardware, network or data center failure.

8.16 Solution Administration

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, the following applies:

A. 8.16.1 Ability of the Purchasing Entity to fully manage identity and user accounts.

Strategic Communications' IaaS, PaaS and SaaS offerings utilize centralized identity and access management consoles to provide customers the ability to restrict the visibility of their cloud hosted data and documents to specific users and groups.

An example of this capability is through our AWS offerings, which capabilities such as:

AWS Identity and Access Management (IAM) - A web service that enables AWS customers to manage users and user permissions in AWS. The service is targeted at organizations with multiple users or systems that use AWS products such as Amazon EC2, Amazon SimpleDB, and the AWS Management Console. With AWS IAM, a Purchasing Entity can centrally manage users, security credentials such as access keys, and permissions that control which AWS resources users can access.

Permissions allow the Purchasing Entity to specify who has access to AWS resources and which actions they can perform on those resources. Every AWS Identity and Access Management (IAM) user starts with no permissions. In other words, by default, users can do nothing, not even view their own access keys. To give a user permission to do something, the Purchasing Entity can add the permission to the user (that is, attach a policy to the user), or add the user to a group that has the desired permission.

B. 8.16.2 Ability to provide anti-virus protection, for data stores.

For Strategic Communications' managed server instances, Strategic Communications provides McAfee Enterprise Anti-Virus protection. Only data stores mapped and/or managed by these instances are provided this anti-virus protection.

All other services require anti-virus solutions to be provided by the customer.

C. 8.16.3 Ability to migrate all Purchasing Entity data, metadata, and usage data to a successor Cloud Hosting solution provider.

AWS allows customers to move data as needed on and off AWS storage using the public Internet or AWS Direct Connect (which lets customers establish a dedicated network connection between their network and AWS).

AWS Import/Export accelerates moving large amounts of data into and out of AWS using portable storage devices for transport. AWS transfers customer data directly onto and off of storage devices using Amazon's high-speed internal network and bypassing the Internet. For significant data sets, AWS Import/Export is often faster than Internet transfer and more cost effective than customers upgrading their connectivity. With Import/Export encryption is mandatory, and AWS will encrypt customer data using the password they specified and transfer it onto the device.

D. 8.16.4 Ability to administer the solution in a distributed manner to different participating entities.

Participating entities are provisioned in a multi-tenant method which provides each entity a dedicated suite of virtual application servers, databases and services ensuring separation of customer data and traffic. User administration (MACDs) is done through the AWS Identity and Access Management (IAM) service as described above. Each entity would be able to manage their users across different locations.

E. 8.16.5 Ability to apply a participating entity's defined administration polices in managing a solution.

Participating entities are provisioned a dedicated suite of virtual application servers, databases, and services ensuring separation of customer data and traffic. Participating entities are able to define administration policies via a customized hierarchy using role based access for single or multiple locations. Hierarchy levels and role based access are configured separately for each entity and are used to organize configuration tasks and control. Each hierarchy level can be created and configured based on the individual requirements of the participating entity. Permissions for these operations are available to administrators that are configured at higher levels in the hierarchy. Multiple administrators can be defined for each entity based on role and/or location.

<u>For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, the following applies:</u>

F. 8.16.1 Ability of the Purchasing Entity to fully manage identity and user accounts.

Collab9's Secure Hosted voice and collaboration services natively supports SAML v2.0 and SSO using a purchasing entity's Identity Provider (IdP). Supported IdPs include Active Directory Federation Services (AD FS), SiteMinder, PingIdentity, Shibboleth, OpenAM, and Oracle Identity Federation. Deployment and configuration of the IdP is the responsibility of the purchasing entity, however collab9 will configure integration for its cloud applications. Support for CAC and PKI credentials is dependent on capabilities of the IdP provided by the purchasing entity.

If the purchasing entity does not utilize an IdP for SSO, collab9's cloud applications can integrate with customer's Active Directory or LDAP based service for synchronization of user accounts and user authentication. The purchasing entity would have the control to create, modify, and delete user accounts. These user accounts would then be synchronized with collab9's services on a set schedule. Purchasing entity users will have the same username and password for UC applications as defined in the entity's active directory server. For user account synchronization, only specific user attributes are used within collab9's solution to include username, email address, and IP Phone. If attributes or individual user accounts are, changed, added or deleted, the updates are synchronized at the following scheduled synchronization. At no time does collab9 overwrite or update data on the purchasing entity's AD or LDAP system.

G. 8.16.2 Ability to provide anti-virus protection, for data stores.

Not Applicable – collab9's secure hosted voice and collaboration services do not store customer data which is not directly related to the application configurations, settings, records, or user voicemail recordings.

H. 8.16.3 Ability to migrate all Purchasing Entity data, metadata, and usage data to a successor Cloud Hosting solution provider.

Collab9 fully commits that any data that is captured and stored throughout the engagement process shall be tendered to a successor Cloud Hosting solution provider. This includes Purchasing Entity data, metadata, and usage data should this be required. It shall do so with the best of its ability and the availability of said data.

I. 8.16.4 Ability to administer the solution in a distributed manner to different participating entities.

Participating entities are provisioned in a multi-tenant method which provides each entity a dedicated suite of virtual application servers, databases and services ensuring separation of customer data and traffic. User administration (MACDs) is done through Cisco Unified Communications Domain Manager, web based management portal. Each entity would be able to manage their users across different location.

J. 8.16.5 Ability to apply a participating entity's defined administration polices in managing a solution.

Participating entities are provisioned a dedicated suite of virtual application servers, databases, and services ensuring separation of customer data and traffic. Participating entities are able to define administration policies via a customized hierarchy using role based access for single or multiple locations. Hierarchy levels and role based access are configured separately for each entity and are used to organize configuration tasks and control. Each hierarchy level can be created and configured based on the individual requirements of the participating entity. Permissions for these operations are available to administrators that are configured at higher levels in the hierarchy. Multiple administrators can be defined for each entity based on role and/or location.

8.17 Hosting and Provisioning

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, the following applies:

A. 8.17.1 Cloud Hosting Provisioning Processes and Cloud Provisioning Stack

The AWS Management Console is a single destination for managing all AWS resources, from Amazon Elastic Compute Cloud (Amazon EC2) instances to Amazon DynamoDB tables. Use the AWS Management Console to perform any number of tasks, from deploying new applications to monitoring the health of applications. The AWS Management Console also enables customers to manage all aspects of their AWS account, including accessing monthly spending by service, managing security credentials, or even setting up new AWS Identity and Access Management (AWS IAM) users. The AWS Management Console supports all AWS regions and allows customers to provision resources across multiple regions.

B. 8.17.2 Tool Sets

Command Line Interface: The AWS Command Line Interface (CLI) is a unified tool used to manage AWS cloud services. With just one tool to download and configure, customers can control multiple AWS resources from the command line and automate them through scripts. The AWS CLI introduces a new set of simple file commands for efficient file transfers to and from Amazon Simple Storage Service (Amazon S3).

Use Existing Management Tools: Many of the tools that organizations use to manage on-premises environments can be integrated with AWS as well. Integrating an AWS environment can provide a simpler and quicker path for cloud adoption, because a customer's operations team does not need to learn new tools or develop completely new processes. For example:

- **AWS Management Portal for vCenter** enables customers to manage their AWS resources using VMware vCenter. The portal installs as a vCenter plug-in within the existing vCenter environment. Once installed, it enables customers to migrate VMware VMs to Amazon EC2 and manage AWS resources from within vCenter. The AWS resources that customers create using the portal can be located in their AWS account, even though those resources have been created using vCenter. For experienced VMware administrators, AWS Management Portal for vCenter provides a familiar look and feel

that can make it easy to start using AWS. AWS Management Portal for vCenter is available at no additional charge.

- **The Amazon EC2 VM Import Connector** extends the capabilities of VMware vCenter to provide a familiar graphical user interface customers can use to import their preexisting Virtual Machines (VMs) to Amazon EC2. Using the connector, importing a VM is as simple as selecting a VM from the vSphere infrastructure, and specifying the AWS region, Availability Zone, operating system, instance size, security group, and Amazon Virtual Private Cloud (Amazon VPC) details (if desired) into which the VM should be imported. Once the VM has been imported, customers can launch it as an instance from the AWS Management Console and immediately take advantage of all the features of Amazon EC2.

- **AWS Management Pack for Microsoft System Center** enables customers to view and monitor their AWS resources directly in the Operations Manager console. This way, customers can use a single, familiar console to monitor all of their resources, whether they are on-premises or in the AWS cloud. The Purchasing Entity obtains a consolidated view of all AWS resources across regions and Availability Zones. It also has built-in integration with Amazon CloudWatch so that the metrics and alarms defined in Amazon CloudWatch surface as performance counters and alerts in the Operations Manager console. Information on AWS Management Pack for Microsoft System Center can be found here.

For Strategic Communications' SaaS offerings that utilize Collab9 as its Cloud Service Provider, the following applies:

C. 8.17.1 Documented Cloud Hosting Provisioning Processes and Cloud Provisioning Stack

Not Applicable – collab9's secure hosted voice and collaboration services are offered as a SaaS service. Upon finalization of customer requirements, all cloud services and applications are configured to specifications.

D. 8.17.2 Tool Sets

Deploying new servers: Not Applicable – collab9's secure hosted voice and collaboration services are offered as a SaaS service. Customers will not need to order or deploy new servers or resources. Since underlying resources are based solely on active user counts, resources are sized and adjusted automatically to user quantity.

Creating and storing server images for future multiple deployments: Not Applicable – collab9's secure hosted voice and collaboration services are offered as a SaaS service. Customers will not need to order or deploy new servers or resources for additional deployments. Since underlying resources are based solely on active user counts, resources are sized and adjusted automatically to user quantity.

Securing additional storage space: Not Applicable – collab9's secure hosted voice and collaboration services are offered as a SaaS service. Customers will not need to order or deploy additional storage

space. Since underlying resources are based solely on active user counts, resources are sized and adjusted automatically to user quantity.

Monitoring tools for use by each jurisdiction's authorized personnel: Not Applicable – collab9's secure hosted voice and collaboration service subscription includes 24/7/365 monitoring at a US based Network Operations Center. All customer applications, data center infrastructure, and required onsite hardware including telephones and/or optional voice gateways are proactively monitored.

E. 8.17.3 Established Rate Structures

Established rate structures for Strategic Communications' IaaS, PaaS and SaaS service offerings have been defined in our provided price catalog, SC-3 – Cost Schedule (RFP Attachment G)

8.18 Trial and Testing Periods

A. 8.18.1 Testing and Training Periods

Because cloud services are by nature self service and on-demand, Strategic Communications does not offer live/in-person no cost training or testing periods. Live/in-person training can be purchased as part of Strategic Communications' Value Added Services, IS Training offering.

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, no cost online documentation and learning videos are provided free of charge.

B. 8.18.2 Testing Environment

Strategic Communications does not offer test and/or proof of concept environments for general project evaluation purposes. If a test/proof of concept environment is required for evaluation of mandatory requirement validation, a request should be submitted to the Strategic Communications Contracts Manager defining the technical parameters and objectives of the test for approval.

C. 8.18.3 Training and Support

For Strategic Communications' IaaS, PaaS and SaaS offerings that utilize Amazon Web Services as its Cloud Service Provider, no cost online documentation and learning videos are provided free of charge.

8.19 Integration and Customization

Strategic Communications' IaaS, PaaS and SaaS offerings provide simple ways to access servers, storage, databases, and a broad set of application services via a web application, mobile client, or programmatically through published and well documented APIs. These API's allow programmers an opportunity to develop applications that are more scalable, flexible and infrastructure aware.

Common tools from vendors such as Microsoft, VMware, BMC Software, Okta, RightScale, Eucalyptus, CA, Xceedium, Symantec, Racemi, and Dell already support our cloud offering. This flexibility allows Strategic Communications customers to easily provision, manage, and monitor all of their IT resources through a "single pane of glass" with the tool that best fits their unique needs.

Many of the tools that organizations use to manage on-premises environments can be integrated with AWS as well. Integrating with our cloud environment can provide a simpler and quicker path for cloud adoption, because a customer's operations team does not need to learn new tools or develop completely new processes.

Examples of integration capabilities using our Amazon Web Services offering include:

- **Command Line Interface** - The AWS Command Line Interface (CLI) is a unified tool used to manage AWS cloud services. With just one tool to download and configure, customers can control multiple AWS resources from the command line and automate them through scripts. The AWS CLI introduces a new set of simple file commands for efficient file transfers to and from Amazon Simple Storage Service (Amazon S3).

- **AWS Management Portal for vCenter** - Enables customers to manage their AWS resources using VMware vCenter. The portal installs as a vCenter plug-in within the existing vCenter environment. Once installed, it enables customers to migrate VMware VMs to Amazon EC2 and manage AWS resources from within vCenter. The AWS resources that customers create using the portal can be located in their AWS account, even though those resources have been created using vCenter. For experienced VMware administrators, AWS Management Portal for vCenter provides a familiar look and feel that can make it easy to start using AWS. AWS Management Portal for vCenter is available at no additional charge.

- **The Amazon EC2 VM Import Connector** - Extends the capabilities of VMware vCenter to provide a familiar graphical user interface customers can use to import their preexisting Virtual Machines (VMs) to Amazon EC2. Using the connector, importing a VM is as simple as selecting a VM from the vSphere infrastructure, and specifying the AWS region, Availability Zone, operating system, instance size, security group, and Amazon Virtual Private Cloud (Amazon VPC) details (if desired) into which the VM should be imported. Once the VM has been imported, customers can launch it as an instance from the AWS Management Console and immediately take advantage of all the features of Amazon EC2.

- **AWS Management Pack for Microsoft System Center** - Enables customers to view and monitor their AWS resources directly in the Operations Manager console. This way, customers can use a single, familiar console to monitor all of their resources, whether they are on-premises or in the AWS cloud. The Purchasing Entity obtains a consolidated view of all AWS resources across regions and Availability Zones. It also has built-in integration with Amazon CloudWatch so that the metrics and alarms defined in Amazon CloudWatch surface as performance counters and alerts in the Operations Manager console.

8.20 Marketing Plan

Strategic Communications' Marketing Team will ensure NASPO ValuePoint and Participating Entities have adequate information and visibility to the NASPO ValuePoint Contract as an efficient and wise course to procure and acquire secure, reliable and affordable Cloud Solutions.

Strategic Communications' Marketing Goals are to:

- Increase orders sent and awarded through the NASPO ValuePoint Contract every year through the duration of the contract by delivering innovative solution sets.
- Increase awareness of the Strategic Communications' Cloud Solutions available to NASPO ValuePoint and Participating Entities within our current customer base and prospects.
- Maintain high levels of customer satisfaction for agencies who utilize the NASPO ValuePoint Contract to procure technology products and services.
- Encourage Strategic Communications' OEM and Distribution partners to support the Strategic Communications' Cloud Solutions available to NASPO ValuePoint and Participating Entities through visibility within their organization and OEM endorsements.
- Encourage entities who are not utilizing the NASPO ValuePoint Contract to partner with NASPO and submit orders through the NASPO ValuePoint Contract.

Strategic Communications will create electronic and printed marketing collateral to illustrate the benefits the NASPO ValuePoint Contract can offer Entities when procuring Cloud Solutions. Strategic Communications will add customized information regarding the NASPO ValuePoint Contract on both electronic and print copies of capabilities statements and Strategic Communications' existing marketing collateral.

Strategic Communications will utilize an array of web tactics in order to inform agencies about the NASPO ValuePoint Contract and how the NASPO ValuePoint Contract can assist with Cloud Solution procurement needs. This strategy will assist in conveying the message that Strategic Communications and NASPO will work together to provide end users with reliable, secure, low risk technology solutions at fair and reasonable prices.

A. Website Strategy

Strategic Communications will develop an image and content rich webpage to display organizational goals, value propositions and differentiators, products/services covered on the contract, blogs/newsletters, videos and resources for Purchasing Entities to take advantage of in alignment with the NASPO ValuePoint Contract. Strategic Communications will develop a dedicated page to educate Purchasing Entities about the value of the NASPO ValuePoint Contract, utilization of the contract vehicle, as well as contact information for further information regarding the NASPO ValuePoint Contract.

B. Email Marketing Strategy

Strategic Communications will develop messaging to convey the value for Purchasing Entities to utilize the NASPO ValuePoint Contract. Emails will have electronic attachments of the NASPO ValuePoint Contract marketing collateral describing the value and utilization of the contract along with a link to the NASPO ValuePoint webpage on the Strategic Communications site. Email campaigns will be coordinated through our CRM system, along with metrics and analytics for each campaign. This information will be helpful in the follow up process for our Federal Sales and Business Development teams in making appointments with Purchasing Entities to increase awareness of the NASPO ValuePoint Contract.

C. Social Media Strategy

Having a social media presence helps to compliment an organization's marketing mix by providing an effective avenue to communicate with potential clients. Strategic Communications will focus on the following social media platforms in order to increase target awareness and engagement of NASPO ValuePoint Contract to Purchasing Entities:

- **Twitter** – The explosion of mobile technology and smart phones have given rise to social media platforms, like Twitter. Sharing content and building a dedicated audience is extremely simple on this social media platform. Strategic Communications will utilize Twitter to share blog content, newsletters and other information relating to Cloud Solutions offered through the NASPO ValuePoint Contract with followers. Strategic Communications follows industry leaders and Government agencies who are on Twitter and interacts with them by retweeting and "favoring" their tweets. Utilizing Twitter, Strategic Communications will position itself as a thought leader within the technology industry, helping to further promote the NASPO ValuePoint Contract to Purchasing Entities. Twitter also has powerful promotion tools that can accomplish a number of goals: Followers, Website Clicks/Conversions, Tweet Engagement and Generating Leads. Strategic Communications will utilize these tools to increase engagement from Government agencies and Contracting Officers. With the increased following of relevant prospects, we will be able to increase traffic to the NASPO ValuePoint Contract webpage, thus increasing awareness of the contract.
- **LinkedIn** – The largest social network dedicated to connecting business professionals. LinkedIn promotes business to business networking, talent acquisition and promotion. LinkedIn can be utilized as a very effective and targeted prospecting tool along with content sharing. Strategic Communications will utilize the tools on LinkedIn to drive brand, messaging and to promote our Cloud Solutions offered through the NASPO ValuePoint Contract. This strategy will provide another avenue in increasing awareness of the value of NASPO ValuePoint Contract.

D. Blog and Newsletter Strategy

Blogs and newsletters are a great way to generate new, fresh content to targeted audiences. These platforms will play an essential role in Strategic Communications positioning itself as a thought leader within the industry. Blogs and newsletters will be utilized for marketing the NASPO ValuePoint Contract to subscribers as well as social media followers focused in the Government marketplace.

E. Lead Generation Plan

Strategic Communications' lead generation plan will be include the following components:

- Tradeshows and Events
- Social Networking
- Search Engine Optimization
- Public Relations
- Vendor Programs
- Innovative Solution Set "White Paper" with a call to action

F. Call Campaigns

Strategic Communications has set up Call Campaigns to drive business to our large contracts. We will utilize our Call Campaigns to discuss the NASPO contract with our existing and future clients.

G. Agent Program

Strategic Communications will leverage our partner, Collab9, to take advantage of using their sales agents on our behalf. This Agent Program adds considerable value to our marketing plans.

Collab9 intends to present its solutions to NASPO ValuePoint and Participating Entities with a multi-pronged marketing strategy leveraging multiple platforms. This strategy will be content-driven with a decided emphasis on educational resources pertaining to collab9's solution set. In addition to promoting its unique position as a contract holder, collab9 will present resources to this audience to help them effectively leverage and implement its services.

These resources include:

1. Dedicated NASPO Landing Page
   All materials will link back to a dedicated landing page where collab9 will provide all pertinent resources related to the contract, procurement and detail its capabilities via this procurement vehicle. Agencies will be encouraged to link to this page and can also have customized sub-sets for their specific needs (will be supported at State and County Level).

2. Webinars
   Collab9 will host regular webinars for NASPO ValuePoint and Participating Entities featuring secure hosted voice and collaboration-related topics. Collab9 will vary webinar content so that certain sessions are relevant to technical staff, while other sessions will cater to procurement officials and end-users. Webinars will be recorded and available for playback. Agencies will be encouraged to link from their websites so their staff can find the content easily.

3. NASPO Newsletter

Collab9 will create a dedicated newsletter linking to the latest articles, white papers and videos that pertain to this audience.

4. Blog
Collab9 hosts a large volume of content via its secure hosted voice and collaboration blog. Users from NASPO ValuePoint and Participating Entities can subscribe to receive the latest content updates.

5. Outreach
Collab9 will utilize direct mail and digital platforms to inform agencies of the contract, the benefits of secure hosted voice and collaboration, and its capabilities.

6. In-Person Events
Collab9 will host lunch and learn workshops in various State, County, and City agencies on the benefits of secure hosted voice and collaboration. These will be scheduled based on availability of collab9's team and the availability of the host agency. Collab9 plans to have one (1) event per month on a rotational basis and is open to recommendations of where to have these events.

8.21 Related Value-Added Services to Cloud Solutions

Strategic Communications offers a multitude of benefits as a Value Added Reseller. We offer consulting services, implementation support, initial setup support, and more.

All of the Customer Services discussed in Section 8.4.1 are Value Added Services. We offer a fully staffed Support Help Desk, discussed detail in Section 8.4.2. We offer dedicated Account Executives and offer a fully staffed Cloud Division, as shown and discussed in Section 6.1.

8.22 Supporting Infrastructure

A. 8.22.1 Purchasing Entity Supporting Infrastructure Requirements

For Strategic Communications' IaaS, PaaS and SaaS offerings deployed in Public or Community cloud scenario's, there is *no specific supporting infrastructure required* by the Purchasing Entity.

For Strategic Communications' IaaS, PaaS and SaaS offerings deployed in Private cloud scenario's, only on premise infrastructure required by the Purchasing Entity's/customers technical requirement is required for purchase. For example, customers who wish to deploy automated on-premise storage synchronized with the cloud, may opt to purchase an Amazon Storage Gateway appliance for seamless, secure communications and synchronization. However, data synchronization using Strategic Communications' IaaS and PaaS storage services do not inherently require any on-premise infrastructure.

A. 8.22.2 Installation of New Infrastructure and Costs Associated

For Strategic Communications' IaaS, PaaS and SaaS offerings deployed in Public or Community cloud scenarios, Strategic Communications and its Cloud Service Providers are responsible for installation of new infrastructure. No additional cost is incurred on behalf of the purchasing entity.

For Strategic Communications' IaaS, PaaS and SaaS offerings deployed in Private cloud scenario's, ONLY on premise infrastructure required by the Purchasing Entity's/customers technical requirement is subject to incur costs of required infrastructure. The purchasing entity/customer is responsible for the installation and cost of new infrastructure to support their on premise requirements. Utilization of the services hosted by Strategic Communications and/or its Cloud Service Providers do not incur additional costs as noted above for Public and Community cloud services.

8.23 Alignment of Cloud Computing Reference Architecture

Strategic Communications' cloud offerings as denoted in **Attachment SC-6** utilizes an architecture that matches the NIST Cloud Computing Reference Architecture. The architecture for each product/service meets the following definitions:

- **Infrastructure as a Service (IaaS)** – Capability provided to the consumer to provision processing, storage, networks, and other fundamental computing resources where the consumer is able to deploy and run arbitrary software, which can include operating systems and applications. The consumer does not manage or control the underlying cloud infrastructure but has control over operating systems, storage, deployed applications; and possibly limited control of select networking components (e.g., host firewalls).

- **Platform as a Service (PaaS)** - The capability for the consumer to deploy onto the cloud infrastructure consumer-created or-acquired applications created using programming languages and tools supported by the provider. This capability does not necessarily preclude the use of compatible programming languages, libraries, services, and tools from other sources. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, or storage, but has control over the deployed applications and possibly application hosting environment configurations.

- **Software as a Service (SaaS)** - The capability for the consumer to use the provider's applications running on a cloud infrastructure. The applications are accessible from various client devices through a thin client interface such as a Web browser (e.g., Web-based email), or a program interface. The consumer does not manage or control the underlying cloud infrastructure including network, servers, operating systems, storage, or even individual application capabilities, with the possible exception of limited user specific application configuration settings.

In addition, Strategic Communications' IaaS, PaaS and SaaS offering through Amazon Web Services exceed this requirement based on Amazon Web Services being referenced and utilized in NIST publications such as NIST SP800-146, that provide a basis of reference for the overarching NIST Cloud Computing Reference Architecture document (NIST SP500-292).

Demonstration of this alignment is proven through the following list of regulations, standards, best practices and accreditations our offerings currently hold or are managed in accordance with the following.

- Federal Risk and Authorization Management Program (FedRAMP)
- Department of Defense (DoD) Security Requirements Guide (SRG) security impact levels 2 and 4
- Federal Information Security Management Act (FISMA)
- National Institute of Standards and Technology (NIST) 800-171
- National Institute of Standards and Technology (NIST) 800-53

1. Agreement Overview

This Agreement represents a Service Level Agreement ("SLA" or "Agreement") between **Strategic Communications** and Tri-Arrows Aluminum Inc. for the provisioning of IT services required to support and sustain through the MSP Premium package. (As Outlined Below)

This Agreement remains valid until superseded by a revised agreement mutually endorsed by the stakeholders.
This Agreement outlines the parameters of all IT services covered as they are mutually understood by the primary stakeholders. This Agreement does not supersede current processes and procedures unless explicitly stated herein.

2. Goals & Objectives

The **purpose** of this Agreement is to ensure that the proper elements and commitments are in place to provide consistent IT service support and delivery to the Customer(s) by the Service Provider(s).

The **goal** of this Agreement is to obtain mutual agreement for IT service provision between the Service Provider(s) and Customer(s).

The **objectives** of this Agreement are to:

- Provide clear reference to service ownership, accountability, roles and/or responsibilities.
- Present a clear, concise and measurable description of service provision to the customer.
- Match perceptions of expected service provision with actual service support & delivery.

3. Stakeholders

The following Service Provider(s) and Customer(s) will be used as the basis of the Agreement and represent the **primary stakeholders** associated with this SLA:

IT Service Provider(s): Strategic Communications
IT Customer(s): Tri-Arrows Aluminum Inc. ("Customer")

4. Periodic Review

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

This Agreement is valid from the **Effective Date** outlined herein and is valid until further notice. This Agreement should be reviewed at a minimum once per fiscal year; however, in lieu of a review during any period specified, the current Agreement will remain in effect.

The **Business Relationship Manager** (Strategic Communications) is responsible for facilitating regular reviews of this document. Contents of this document may be amended as required, provided mutual agreement is obtained from the primary stakeholders and communicated to all affected parties. The Document Owner will incorporate all subsequent revisions and obtain mutual agreements / approvals as required.

Business Relationship Manager: Strategic Communications
Review Period: Quarterly
Next Review Date: / /2013

5. Service Agreement

The following detailed service parameters are the responsibility of the Service Provider in the ongoing support of this Agreement.

5.1. Service Scope

The following Services are covered by this Agreement*;

- Monitoring
- Reporting
- Alert Management
- Maintenance
- Onsite As Required
- Threat Protection
- Email Continuity
- Web Filtering
- Workstation Management
- Helpdesk Services – Level I, II, III Support
- Troubleshoot & Fix Server, Infrastructure Including Workstations
- Monthly Recurring Charge
- Initial Setup Fee Required

* Consulting Services Billed Time & Materials for Hardware failures, Disaster Recovery, Projects.

* Strategic Communications reserves the right to include ‘out of scope’ work within the scope of this agreement.

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

5.2. Customer Requirements

Customer responsibilities and/or requirements in support of this Agreement include:

- Payment for all support costs at the agreed interval.
- Reasonable availability of customer representative(s) when resolving a service related incident or request.
- Client is asked to notify Strategic Communications of any/all changes to their network environment at least 30 days prior to the change takes place including all: office location, hardware, software, telecom/circuit, printing/copying/scanning, and website/DNS.

5.3. Service Provider Requirements

Service Provider responsibilities and/or requirements in support of this Agreement include:

- Meeting response times associated with service related incidents.
- Appropriate notification to Customer for all scheduled maintenance.

5.4. Service Assumptions

Assumptions related to in-scope services and/or components include:

- Changes to services will be communicated and documented to all stakeholders.
- The number of Servers, Workstations and/or network devices monitored by STRATEGIC MSP may be modified from time to time by the mutual agreement of both STRATEGIC and Customer and may affect the MRC at the time of the change.

6. Service Management

Effective support of in-scope services is a result of maintaining consistent service levels. The following sections provide relevant details on service availability, monitoring of in-scope services and related components.

6.1. Service Availability

Coverage parameters specific to the service(s) covered in this Agreement are as follows:

- Strategic Communications Hours of Operation 8:00am-5:00pm (EST)
- Telephone support : 8:00 A.M. to 5:00 P.M. Monday – Friday (EST)
    - Calls received outside of office hours will be forwarded to our On Call Voice Mailbox.

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

- Email support: Monitored 8:00 A.M. to 5:00 P.M. Monday – Friday (EST)
    - Emails received outside of office hours will be collected, however no action can be guaranteed until the next working day.

- Onsite assistance guaranteed within 4 hours during the business hours.
- Onsite assistance after hours guaranteed next business day.

6.2. Service Requests

In support of services outlined in this Agreement, the Service Provider will respond to service related incidents and/or requests submitted by the Customer within the following time frames:

- All Service Requests will be responded to daily. Priority will be determined mutually between STRATEGIC and Customer.
- High Priority requests will be addressed same day.
- Medium Priority requests will be addressed within 48 hours.
- Low Priority requests will be addressed as scheduled.

Remote assistance will be provided in-line with the above timescales dependent on the priority of the support request.

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

6.3. Additional 24x7 Help Desk/NOC SLA DETAIL

SLA Metrics- Strategic MSP Operations Center				
Priority	**Response SLA (Business Hours)**	**Response SLA (After Business Hours)**	**Plan to Resolution SLA**	**Description**
P1: Critical	15 Minutes (Phone Call Required)	2 Hour (Phone Call Required)	Ticket Handled Immediately. Work until resolve	This is an EMERGENCY condition that significantly restricts the use of an application, system or network to perform any critical business function. This could mean that several users are impacted.
P2: High	1 Hour	4 Hours (Phone Call Required)	2 Hours	The reported issue may severely restrict use of key devices in the network. This could mean that multiple users are impacted but the overall network and servers functioning
P3: Medium	4 Hours	Next Day	24 Hours	The reported issue may restrict the use of one or more features of the system, but the business or financial impact is not severe.
P4: Low	Same Day	Next Day	24-48 hours	The reported anomaly in the system does not substantially restrict the use of one or more features of the product to perform necessary business functions.

SLAs are applicable during steady state period (60 days after start of service)
SLAs are void on unsupported devices
SLAs are void when monitoring template configurations are changed from the templates applied by STRATEGIC and the NOC

To support the key objectives of the Service Level Agreement (SLA), NOC will operate with the following shared services delivery model:

- All alerts will be captured by NOC.
- NOC will provide monitoring, alerting, ticketing and escalation to STRATEGIC
- Incoming alerts will be verified to identify false alerts or alerts where no action is required and actionable alerts will be ticketed by NOC
- Any documented Standard Operating Procedure (SOP) will be executed by first level of support for verification only
- Tickets without SOPs will be escalated to NOC Level 2 Network Team for verification, analysis and remediation of issues
- Any tickets/issues which need to be resolved with 3rd party vendors will be escalated to STRATEGIC
- STRATEGIC and Customer will assist the NOC and establish the escalation priority for alerts.
- STRATEGIC and Customer can escalate or downgrade alerts at any time.

The sources of alerts are either from the monitoring system or from user requests entered via the ticketing system, phone or emails. NOC will monitor the supported network devices 24 x 7 and will alert STRATEGIC based on the priority of the alert and device.

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

Resolution Time mandates one or more of the following activities are complete:

- Temporary work around/Fix to restore the business service
- Permanent fix (may be a result of root cause analysis of an issue)
- Issue escalated to vendor
- Action plan is created to address the trouble ticket

NOC ESCALATION PROCEDURES

- NOC will call all escalation contacts as defined by STRATEGIC and Customer and leave voice mails if no one answers,
  additionally emails will be sent to the escalation points.
- All escalations from NOC will be made to STRATEGIC/Customer escalation contacts as defined in the escalation matrix in the Partner Portal

The following table describes the various priority levels associated with incidents:

Priority	Phone	Email	Ticket
P0: Critical	X	X	X
P1: High		X	X
P2: Medium		X	X
P3: Low		X	X

THE ESCALATION MATRIX TO NOC

The following is the escalation matrix for escalating any incidents relating to services or the on-boarding process to the NOC.

Name & Title	Email	Phone
Technical Support	Service&yourstrategic.com	502-493-7234
Shift Supervisors	bwalls@yourstrategic.com	502-813-8008

SUPPORT WINDOW – NOC

Below are the hours of operations of the NOC. All hours mentioned are client local hours:

Definition of Delivery	Days	Service Timings	Mode
Peak Business Hours	Monday to Friday	8:00 am to 5:00 pm	Remote
After Business Hours	Monday to Friday	5:00 pm to 8:00 am	Remote
Weekend After Business Hours	Saturday & Sunday	5:00 pm Friday to 8:00 am Monday	Remote

INCIDENT REPORTING & TROUBLESHOOT (PROBLEM MANAGEMENT)

TASKS INCLUDE:

. Analyze incidents to identify underlying problems (once the incident is handled)

. Record, classify and diagnose problems

. Transfer problems into “known errors”

. Updating the ticket with complete chronology and the steps to remediate the incident

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

NOC General Monitoring Thresholds & Frequency

Monitor Name	Default Threshold Value	Polling Frequency
Availability	100% Packet Loss/Timeout	Every 6 Minutes
CPU	Warning 85%-Critical 95%	Every 5 Min or 3 Data Points
Memory	Warning 85%-Critical 95%	Every 5 Min or 3 Data Points
Disk	Warning 10%-Critical 250 MB	Every 15 Minutes
Event Log	Specific Event IDs per OS/App	Every 15 Minutes
Device Availability	When the device is down	Every 15 Minutes
Performance Counters	Depends on device/application	Every 15 Minutes
Windows Events	Depends on Event	Every 15 Minutes
Windows Services	When the service is stopped	Every 15 Minutes

Support Definition

The 24 x 7 Help Desk support provides call-answering service, troubleshooting up to the server and call-logging. The help desk utilizes a populated knowledge base to resolve the incident at the initial contact. The Knowledge base is a compendium of best in class standard troubleshooting and repair procedures and STRATEGIC/Customer supplied guidance on process, site level detail, and escalation contacts. Additional troubleshooting scripts enhance the service while a populated knowledge base and remote access allows for troubleshooting of issues that reside within the core infrastructure. If a call can't be resolved, a predefined (STRATEGIC/Customer supplied and documented) call-escalation process will begin.

End User Laptop/Desktop Helpdesk includes:

- 24 x 7 x 365 M-F Help Desk
- Workstation troubleshooting and triage
- Support for Windows based desktops and supported applications (per list)
- Support for custom/vertical applications if support documentation is provided
- Network/Internet connectivity issues
- Desktop peripheral hardware (non-hardware issues) Printers, Keyboards, Monitors, Mouse, Barcode readers, etc.
- Use of Remote Control to resolve issues
- Basic "how to" questions
- Escalation –as defined and documented by STRATEGIC/Customer - Includes access to ePortal for real time reporting
- Server based password resets
- User add, moves, changes in Active Directory
- Remote access and proper authentication and level of access must be provided to help desk.
- User Administration of MS Exchange or hosted e-mail applications o List of supported applications will be documented by STRATEGIC/Customer during on boarding process
- Firewall troubleshooting (with documentation)
- Server diagnostic and troubleshooting (OS Only) the help desk will troubleshoot server operating system problems, document and recommend changes/patches to STRATEGIC.
- Citrix server support (user session shadowing/canceling)
- Connectivity, POS, OS, Remote Access, Peripherals, Spyware, Anti-Virus, after hour's answering service.

~Custom applications should have a clear escalation to software vendor
~Citrix Administration is limited to connection issues and user administration (no server work or application publishing)
~Exchange is limited to individual issues provided Help Desk has email configuration info and site issues can be escalated back to STRATEGIC
~List of supported applications will be documented during the boarding process
~All out of scope requests will be escalated back to STRATEGIC for resolution.
~Support requests deemed out of scope may be supported on a Time and Material basis; Rates available upon request.

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

Examples of Help Desk supported incidents:

- Software/application-related incidents on Microsoft, Novell, or Citrix from the desktop level
- Printer-related problems such as mapping, drivers and connectivity
- Incidents related to a network such as log in and response issues
- Core competency product set incidents for Microsoft, Novell, Citrix and Cisco
- Server based Password resets (Documentation, access, and approval process supplied by VAR)
- User add, moves, or changes in Active Directory (credentials and documentation required)
- Firewall Troubleshooting (with documentation and access)
- Server Diagnostic (with documentation and access) OS Troubleshooting

Not included in this service are:

- Installation of software – new or re-installation
- Application training or instructional use other than basic "How to" as outlined in "Notes" on page 6.
- File restoration and data backup.
- Problems occurring in applications or devices not on the Supported Products list or not documented in the knowledge base.
- Setup of new devices. PCs or peripherals.
- No onsite desk side support is included in the standard offering of this service. STRATEGIC's onsite staff can be escalated to by our Solutions Center to resolve any onsite desktop issues and STRATEGIC rates will apply.
- Spyware, Malware, Adware, and Virus removal – initiate scan only
- Custom Application without relevant supporting documentation

Notes:

- Help Desk will support any computer based on Intel and AMD processors or work-alike running a current or recent version of Microsoft Windows 9X/Me/NT/2000/XP/Vista/7 and Server 2010, Novell Netware, and their back-office applications.
- Help Desk will provide basic "how to" support for all listed standard applications. "How to" support does not include advanced editing features within the application. The intent of the support is to help provide a healthy pc or network environment for the user to maintain productivity, training of application utilization is deemed out-of-scope.
- Equipment may be in or out of warranty.
- All third party software supported by the respective manufacturers.
- Help Desk is for the current version and two versions back.
- The products and company names listed are trademarks or registered trademarks of their respective companies.
- Help Desk Reserves the right to make changes to the list of supported products without notice.

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

Phone and e-ticket support will remediate user desktop issues in the following areas:

- Workstation Hardware Support.
- Operating System Support.
- Printing / Network Connectivity Support.
- Core Application Support, Microsoft, Citrix & Symantec.
- Email Client (Outlook /Outlook Express/GroupWise).
- Microsoft Office Standard Suite.
- Digital Signage Support (VAR supplies relevant documentation_
- IMSN Certified Technician dispatch – normal IMSN fees apply
- Point of Sale Terminal support

Call Logging: Calls are logged in ticketing system and automatically forwarded via pre-determined email to STRATEGIC. Both Closed and escalated tickets are forwarded.

- **Closed –** A call is resolved at first point of contact, details logged and call closed.
- **Escalated –** All possible troubleshooting and resolution avenues exhausted – call is escalated to STRATEGIC.

Out of scope calls, calls requiring additional unsupplied access or documentation or calls requiring onsite support will be considered "completed" pending successful escalation as per on boarding documentation

-Help Desk Ticket System integrates with STRATEGIC through Service Management Platform

On-boarding: Data Capture Forms have been designed to provide Help Desk analysts with required information to resolve most client issues. Additional data can be provided or requested and posted as necessary. This includes information such as:

- Admin Credentials
- Server Addresses
- Remote Connectivity methods
- VIP Call Handling
- Password Reset Authentication
- Permissions prior to commencing work
- Standard and After Hours Escalations contacts and Process

Strategic Communications
310 Evergreen Rd. Suite 100
Louisville, KY 40243
502-493-7234

Timeline & Checklist

Help Desk follows a ten business-day cycle from discovery to start-up to accommodate the following processes:

- Discovery call
- Ticketing & Billing set-up
- Telecom & IVR specifications
- ePortal set-up
- Documentation for Knowledge Base
- Connectivity and Telecom testing
- Staff Training

Severity Levels

- Help Desk reports action incidents on a 4 level severity system. Definitions of each severity level are as follows:
    - Severity Level 1 – Site wide outage
    - Severity Level 2 – Group impacted / down
    - Severity Level 3 – VIP end user impacted
    - Severity Level 4 – 1 end user impacted / work order

In order to prioritize tickets, Help Desk designates a severity level based on the following criteria:

Priority	Severity Classifications/Priority Definition
Severity 1 Severe	A complete failure of an implemented module, system supported process, or the production systems environment has occurred. There is no work-around for the problem and because of the nature of the problem it is felt that the impact may go on for a protracted period of time. A majority of Client end-users of the production system are affected, an entire Client location/entity is affected, or the outage has occurred during a critical business process or period, such as end of the month or, end of the year processing. The business interruption will have an adverse impact on customers and financial results. Severity 1 Service Requests will take precedence over all other non-severe requests.
Severity 2 Major	Major problems exist within a module, system supported process or production systems environment. The incident affects large portions of Client community, and may impact customers and financial results. This includes high visibility problems involving upper management or time sensitive issues.
Severity 3 Moderate	Problems exist with Client production systems environment that effect a few users on a regular basis, thereby preventing work from being accomplished.
Severity 4 Minor/Nominal	An informational inquiry or non-reoccurring incident exists with Client production environment that affects single users or a request is received for new hire account set ups, adds, moves changes, and General system administration

Standards & Key Performance Metrics

Metric	Target	Measurement Interval	Enhanced KPI Available	Notes
Calls answered	95%	Monthly	Yes	Calls Abandoned within 30 seconds (short calls) will be excluded from this calculation
Average Speed of Answer	45 Seconds	Monthly	Yes	Average Speed of Answer or ASA refers to the average amount of time an inbound call sits in queue before it is answered by a live agent.
First Call resolution	70%	Monthly	Yes	First call resolution reflects application of standard technical troubleshooting to diagnose, repair, and verify resumption of normal operation. Out of scope calls, calls requiring additional unsupplied access or documentation or calls requiring on site support will be considered "completed" pending successful escalation as per on boarding documentation. Calls escalated internally from Tier I to Tier II are considered part of the same contact.
% of Calls Answered within ASA Target	90 / 30	Monthly	Yes	90% of all answered calls will be answered within 30 seconds upon entering the queue

Amazon Web Services (AWS) Service Level Agreements (SLAs)

Due to the rapidly evolving nature of AWS's product offerings, SLAs are best reviewed directly online via the links below.

- **Amazon EC2 SLA: http://aws.amazon.com/ec2-sla/**
- **Amazon S3 SLA: http://aws.amazon.com/s3-sla**
- **Amazon CloudFront SLA: http://aws.amazon.com/cloudfront/sla/**
- **Amazon Route 53 SLA: http://aws.amazon.com/route53/sla/**
- **Amazon RDS SLA: http://aws.amazon.com/rds-sla/**

Response to Section 8.10.2

Service Level Agreement

This is the Service Level Agreement for Contractor's hosted voice and collaboration services and supplements the NASPO ValuePoint Master Agreement Terms and Conditions ("Master Agreement") executed by the Customer.

1. Contractor Voice Availability goal:

- Components Included: Contractor-hosted Cisco Unified Communications Manager, Cisco Unity Connection, and Cisco Unified Presence.
- Components Not Included: Services/equipment not provided by Contractor, such as Customer-supplied hardware, Customer's network and broadband connectivity, Customer's PSTN and Long Distance carrier services.
- This SLA only governs customers within the United States.
- Voice Availability goal is shown in this table:

Voice Availability Goal	**99.92%**

- Voice Availability measurements: Voice availability is based on downtime that exists when Customer is unable to make/receive voice calls using the Service.
- Downtime is measured from the time a trouble ticket is opened in Contractor's ticketing system to when the affected Customer's service is restored to the level where the Customer is able to make/receive voice calls using the Service. The trouble ticket must be opened while Customer is experiencing the service problem.
- Downtime does not include system maintenance activities or circumstances outside Contractor's control, such as interruptions of service caused by intermediary service providers; client-site electrical outages; failure or malfunction of equipment not owned or controlled by Collab9; acts, negligence, or non-responsiveness on the part of the Customer or its contractors; and other forms of force majeure.
- Contractor will require Customer local site contact's assistance with physical replacement of equipment and to carry out instructions for replacement equipment configuration. All instructions will be provided in English.
- Neither Voice Availability measurements nor downtime calculations apply to Voice Quality.

2. Voice Availability remedies:

- Customer must make a written request to Contractor for the credit within five (5) business days of the last day of the month in which Voice Availability downtime occurred.
- To qualify for credits, the outage must be deemed a Major Service Outage, which is defined as a service outage condition causing major service disruption to the Customer for which a trouble ticket is open.
- The maximum credits given for a specific outage will not exceed 25% of the monthly recurring charges (MRC) for the affected services.
- Should Customer have multiple locations detrimentally affected by an outage, one ticket can be submitted; however, the individual locations affected must be identified in the original ticket.
- Subject to the foregoing limitations, Customer qualifies for a credit as shown in the table below, prorated by the per-seat MRC of the affected users, up to the maximums indicated in this section:

Major Service Outage downtime	Amount of credit based on affected user prorated MRC
10 to 60 minutes	**5%**
1 Hour to 2 Hours	**10%**
2 Hours to 4 Hours	**15%**
4 Hours to 8 Hours	**20%**
Over 8 Hours	**25%**

3. Customer-provided Customer premises Equipment:

- For Customer-provided Customer premises equipment for use by Customer solely with Contractor Services, Contractor will assist in diagnosing and resolving issues using best efforts.

- Should Customer equipment need replacement, Contractor will notify Customer of its inability to assist with repairs, and Customer should replace the equipment accordingly.
- Restoration of Service contingent upon Customer-owned equipment replacement does not apply to Contractor Availability goal or downtime calculations.

4. Language Support:

Contractor answers user calls and support calls in English only. Multiple language support is not offered at this time.

5. Maintenance:

Contractor system maintenance performed within this agreement is categorized as either “Regular Maintenance” or “Emergency Maintenance.”

- Regular Maintenance refers to hardware, software, and system configuration changes/upgrades to improve performance, increase capacity, and/or promote security. Regular Maintenance may temporarily degrade the quality of the Service and it may cause outages. Such effects related to Regular Maintenance will not give rise to service credits under this SLA. Regular Maintenance can be performed any evening between the hours of 10:00 PM and 4:00 AM Pacific.
- Emergency Maintenance refers to efforts to correct Contractor infrastructure conditions likely to cause a severe degradation in service and/or material service outage, thereby requiring immediate attention. Emergency Maintenance may degrade the quality of the Service and it may cause outages. Such effects related to Emergency Maintenance will not give rise to service credits under this SLA. Contractor may undertake Emergency Maintenance at any time deemed necessary and will provide notice of Emergency Maintenance to Customer as soon as is commercially practicable under the circumstances.

6. Service Credit Exceptions; Maximum Credit:

- Service credits will not be available in cases where the goal is not met as a result of: (a) the negligence, acts, or omissions of Customer, its employees, contractors, agents, or its end users, including, without limitation, Customer's failure to comply with terms of Service Exhibit; further, time elapsed due to non-responsiveness from Customer will be deducted from trouble ticket timelines when used in the calculations of SLAs; (b) the failure or malfunction of equipment, applications, or systems not owned or controlled by Contractor; (c) circumstances or causes beyond the control of Contractor, including instances of force majeure; (d) service maintenance, alteration or implementation; (e) the unavailability of required Customer personnel, including as a result of failure to provide Contractor with accurate, current contact information; or (f) Customer's failure to provide Contractor with remote and/or on-site access to covered devices.
- If Customer is entitled to multiple credits under this SLA arising from the same event, such credits will not be cumulative and Customer shall be entitled to receive only the highest maximum single credit availability for such event (e.g., Customer will not be entitled to "double credits"). Credits may not exceed 100% of the monthly fee for the affected service. A credit will be applied only to the month in which the event giving rise to the credit occurred. Customer's remedies for any and all claims relating to the Service will be limited to those set forth in this SLA.

Amazon Web Services: Risk and Compliance

January 2016

(Consult http://aws.amazon.com/compliance/aws-whitepapers/

for the latest version of this paper)

This document is intended to provide information to assist AWS customers with integrating AWS into their existing control framework supporting their IT environment. This document includes a basic approach to evaluating AWS controls and provides information to assist customers with integrating control environments. This document also addresses AWS-specific information around general cloud computing compliance questions.

Risk and Compliance Overview

AWS and its customers share control over the IT environment, both parties have responsibility for managing the IT environment. AWS' part in this shared responsibility includes providing its services on a highly secure and controlled platform and providing a wide array of security features customers can use. The customers' responsibility includes configuring their IT environments in a secure and controlled manner for their purposes. While customers don't communicate their use and configurations to AWS, AWS does communicate its security and control environment relevant to customers. AWS does this by doing the following:

- Obtaining industry certifications and independent third-party attestations described in this document
- Publishing information about the AWS security and control practices in whitepapers and web site content
- Providing certificates, reports, and other documentation directly to AWS customers under NDA (as required)

For a more detailed description of AWS security please see:
AWS Security Center: https://aws.amazon.com/security/

For a more detailed description of AWS Compliance please see
AWS Compliance page: https://aws.amazon.com/compliance/

Additionally, The AWS Overview of Security Processes Whitepaper covers AWS' general security controls and service-specific security.

Shared Responsibility Environment

Moving IT infrastructure to AWS services creates a model of shared responsibility between the customer and AWS. This shared model can help relieve customer's operational burden as AWS operates, manages and controls the components from the host operating system and virtualization layer down to the physical security of the facilities in which the service operates. The customer assumes responsibility and management of the guest operating system (including updates and security patches), other associated application software as well as the configuration of the AWS provided security group firewall. Customers should carefully consider the

services they choose as their responsibilities vary depending on the services used, the integration of those

services into their IT environment, and applicable laws and regulations. It is possible for customers to enhance security and/or meet their more stringent compliance requirements by leveraging technology such as host based firewalls, host based intrusion detection/prevention, encryption and key management. The nature of this shared responsibility also provides the flexibility and customer control that permits the deployment of solutions that meet industry-specific certification requirements.

This customer/AWS shared responsibility model also extends to IT controls. Just as the responsibility to operate the IT environment is shared between AWS and its customers, so is the management, operation and verification of IT controls shared. AWS can help relieve customer burden of operating controls by managing those controls associated with the physical infrastructure deployed in the AWS environment that may previously have been managed by the customer. As every customer is deployed differently in AWS, customers can take advantage of shifting management of certain IT controls to AWS which results in a (new) distributed control environment. Customers can then use the AWS control and compliance documentation available to them (described in the AWS Certifications and Third-party Attestations section of this document) to perform their control evaluation and verification procedures as required.

The next section provides an approach on how AWS customers can evaluate and validate their distributed control environment effectively.

Strong Compliance Governance

As always, AWS customers are required to continue to maintain adequate governance over the entire IT control environment regardless of how IT is deployed. Leading practices include an understanding of required compliance objectives and requirements (from relevant sources), establishment of a control environment that meets those objectives and requirements, an understanding of the validation required based on the organization's risk tolerance, and verification of the operating effectiveness of their control environment. Deployment in the AWS cloud gives enterprises different options to apply various types of controls and various verification methods.

Strong customer compliance and governance might include the following basic approach:

1. Review information available from AWS together with other information to understand as much of the entire IT environment as possible, and then document all compliance requirements.
2. Design and implement control objectives to meet the enterprise compliance requirements.
3. Identify and document controls owned by outside parties.
4. Verify that all control objectives are met and all key controls are designed and operating effectively.

Approaching compliance governance in this manner will help companies gain a better understanding of their control environment and will help clearly delineate the verification activities to be performed.

Evaluating and Integrating AWS Controls

AWS provides a wide range of information regarding its IT control environment to customers through white papers, reports, certifications, and other third-party attestations. This documentation assists customers in understanding the controls in place relevant to the AWS services they use and how those controls have been validated. This information also assists customers in their efforts to account for and to validate that controls in their extended IT environment are operating effectively.

Traditionally, the design and operating effectiveness of control objectives and controls are validated by internal and/or external auditors via process walkthroughs and evidence evaluation. Direct observation/verification, by the customer or customer's external auditor, is generally performed to validate controls. In the case where

service providers, such as AWS, are used, companies request and evaluate third-party attestations and certifications in order to gain reasonable assurance of the design and operating effectiveness of control objective and controls. As a result, although customer's key controls may be managed by AWS, the control environment can still be a unified framework where all controls are accounted for and are verified as operating effectively. Third-party attestations and certifications of AWS can not only provide a higher level of validation of the control environment, but may relieve customers of the requirement to perform certain validation work themselves for their IT environment in the AWS cloud.

AWS IT Control Information

AWS provides IT control information to customers in the following two ways:

1. **Specific control definition.** AWS customers are able to identify key controls managed by AWS. Key controls are critical to the customer's control environment and require an external attestation of the operating effectiveness of these key controls in order to comply with compliance requirements—such as the annual financial audit. For this purpose, AWS publishes a wide range of specific IT controls in its Service Organization Controls 1 (SOC 1) Type II report. The SOC 1 report, formerly the Statement on Auditing Standards (SAS) No. 70, Service Organizations report, is a widely recognized auditing standard developed by the American Institute of Certified Public Accountants (AICPA). The SOC 1 audit is an in-depth audit of both the design and operating effectiveness of AWS' defined control objectives and control activities (which include control objectives and control activities over the part of the infrastructure AWS manages). "Type II" refers to the fact that each of the controls described in the report are not only evaluated for adequacy of design, but are also tested for operating effectiveness by the external auditor. Because of the independence and competence of AWS' external auditor, controls identified in the report should provide customers with a high level of confidence in AWS' control environment. AWS' controls can be considered designed and operating effectively for many compliance purposes, including Sarbanes-Oxley (SOX) Section 404 financial statement audits. Leveraging SOC 1 Type II reports is also generally permitted by other external certifying bodies (e.g., ISO 27001 auditors may request a SOC 1 Type II report in order to complete their evaluations for customers).

Other specific control activities relate to AWS' Payment Card Industry (PCI) and Federal Information Security Management Act (FISMA) compliance. As discussed below, AWS is compliant with FISMA Moderate standards and with the PCI Data Security Standard. These PCI and FISMA standards are very prescriptive and require independent validation that AWS adheres to the published standard.

2. **General control standard compliance.** If an AWS customer requires a broad set of control objectives to be met, evaluation of AWS' industry certifications may be performed. With the AWS ISO 27001 certification, AWS complies with a broad, comprehensive security standard and follows best practices in maintaining a secure environment. With the PCI Data Security Standard (PCI DSS), AWS complies with a set of controls important to companies that handle credit card information. With AWS' compliance with the FISMA standards, AWS complies with a wide range of specific controls required by US government agencies. Compliance with these general standards provides customers with in-depth information on the comprehensive nature of the controls and security processes in place and can be considered when managing compliance.

AWS Global Regions

Data centers are built in clusters in various global regions. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US) (Oregon), EU (Frankfurt), EU (Ireland), Asia Pacific (Seoul) Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing), and South America (Sao Paulo).

AWS Risk and Compliance Program

AWS provides information about its risk and compliance program to enable customers to incorporate AWS controls into their governance framework. This information can assist customers in documenting a complete control and governance framework with AWS included as an important part of that framework.

Risk Management

AWS management has developed a strategic business plan which includes risk identification and the implementation of controls to mitigate or manage risks. AWS management re-evaluates the strategic business plan at least biannually. This process requires management to identify risks within its areas of responsibility and to implement appropriate measures designed to address those risks.

In addition, the AWS control environment is subject to various internal and external risk assessments. AWS' Compliance and Security teams have established an information security framework and policies based on the Control Objectives for Information and related Technology (COBIT) framework and have effectively integrated the ISO 27001 certifiable framework based on ISO 27002 controls, American Institute of Certified Public Accountants (AICPA) Trust Services Principles, the PCI DSS v3.1, and the National Institute of Standards and Technology (NIST) Publication 800-53 Rev 3 (Recommended Security Controls for Federal Information Systems). AWS maintains the security policy, provides security training to employees, and performs application security reviews. These reviews assess the confidentiality, integrity, and availability of data, as well as conformance to the information security policy.

AWS Security regularly scans all Internet facing service endpoint IP addresses for vulnerabilities (these scans do not include customer instances). AWS Security notifies the appropriate parties to remediate any identified vulnerabilities. In addition, external vulnerability threat assessments are performed regularly by independent security firms. Findings and recommendations resulting from these assessments are categorized and delivered to AWS leadership. These scans are done in a manner for the health and viability of the underlying AWS infrastructure and are not meant to replace the customer's own vulnerability scans required to meet their specific compliance requirements. Customers can request permission to conduct scans of their cloud infrastructure as long as they are limited to the customer's instances and do not violate the AWS Acceptable Use Policy. Advance approval for these types of scans can be initiated by submitting a request via the AWS Vulnerability / Penetration Testing Request Form.

Control Environment

AWS manages a comprehensive control environment that includes policies, processes and control activities that leverage various aspects of Amazon's overall control environment. This control environment is in place for the secure delivery of AWS' service offerings. The collective control environment encompasses the people, processes, and technology necessary to establish and maintain an environment that supports the operating effectiveness of AWS' control framework. AWS has integrated applicable cloud-specific controls identified by leading cloud computing industry bodies into the AWS control framework. AWS continues to monitor these industry groups for ideas on which leading practices can be implemented to better assist customers with managing their control environment.

The control environment at Amazon begins at the highest level of the Company. Executive and senior leadership play important roles in establishing the Company's tone and core values. Every employee is provided with the Company's Code of Business Conduct and Ethics and completes periodic training. Compliance audits are performed so that employees understand and follow the established policies.

The AWS organizational structure provides a framework for planning, executing and controlling business operations. The organizational structure assigns roles and responsibilities to provide for adequate staffing, efficiency of operations, and the segregation of duties. Management has also established authority and appropriate lines of reporting for key personnel. Included as part of the Company's hiring verification processes are education, previous employment, and, in some cases, background checks as permitted by law and regulation for employees commensurate with the employee's position and level of access to AWS facilities. The Company follows a structured on-boarding process to familiarize new employees with Amazon tools, processes, systems, policies and procedures.

Information Security

AWS has implemented a formal information security program designed to protect the confidentiality, integrity, and availability of customers' systems and data. AWS publishes a security whitepaper that is available on the public website that addresses how AWS can help customers secure their data.

AWS Certifications, Programs, Reports, and Third-Party Attestations

AWS engages with external certifying bodies and independent auditors to provide customers with considerable information regarding the policies, processes, and controls established and operated by AWS.

CJIS

AWS complies with the FBI's Criminal Justice Information Services (CJIS) standard. We sign CJIS security agreements with our customers, including allowing or performing any required employee background checks according to the **CJIS Security Policy**.

Law enforcement customers (and partners who manage CJI) are taking advantage of AWS services to improve the security and protection of CJI data, using the advanced security services and features of AWS, such as activity logging (**AWS CloudTrail**), encryption of data in motion and at rest (S3's Server-Side Encryption with the option to bring your own key), comprehensive key management and protection (AWS **Key Management Service** and **CloudHSM**), and integrated permission management (IAM federated identity management, multi-factor authentication).

AWS has created a Criminal Justice Information Services (CJIS) **Workbook** in a security plan template format aligned to the CJIS Policy Areas. Additionally, a CJIS Whitepaper has been developed to help guide customers in their journey to cloud adoption.

Visit the CJIS Hub Page**: https://aws.amazon.com/compliance/cjis/**

CSA

In 2011, the Cloud Security Alliance (CSA) launched **STAR**, an initiative to encourage transparency of security practices within cloud providers. The **CSA Security, Trust & Assurance Registry** (STAR) is a free, publicly accessible registry that documents the security controls provided by various cloud computing offerings, thereby helping users assess the security of cloud providers they currently use or are considering contracting with. **AWS is a CSA STAR registrant** and has completed the Cloud Security Alliance (CSA) Consensus Assessments Initiative Questionnaire (CAIQ). This CAIQ published by the CSA provides a way to reference and

document what security controls exist in AWS' Infrastructure as a Service offerings. The CAIQ provides 298 questions a cloud consumer and cloud auditor may wish to ask of a cloud provider.

See: **Appendix A: CSA Consensus Assessments Initiative Questionnaire v3.0.1**

Cyber Essentials Plus

Cyber Essentials Plus is a UK Government-backed, industry-supported certification scheme introduced in the UK to help organizations demonstrate operational security against common cyber-attacks.

It demonstrates the baseline controls AWS implements to mitigate the risk from common Internet-based threats, within the context of the UK Government's "**10 Steps to Cyber Security**". It is backed by industry, including the Federation of Small Businesses, the Confederation of British Industry and a number of insurance organizations that offer incentives for businesses holding this certification.

Cyber Essentials sets out the necessary technical controls; the related assurance framework shows how the independent assurance process works for Cyber Essentials Plus certification through an annual external assessment conducted by an accredited assessor. Due to the regional nature of the certification, the certification scope is limited to EU (Ireland) region.

DoD SRG Levels 2 and 4

The Department of Defense (DoD) Cloud Security Model (SRG) provides a formalized assessment and authorization process for cloud service providers (CSPs) to gain a DoD Provisional Authorization, which can subsequently be leveraged by DoD customers. A Provisional Authorization under the SRG provides a reusable certification that attests to our compliance with DoD standards, reducing the time necessary for a DoD mission owner to assess and authorize one of their systems for operation on AWS. AWS currently holds provisional authorizations at Levels 2 and 4 of the SRG.

Additional information of the security control baselines defined for **Levels 2, 4, 5, and 6 can be found at: http://iase.disa.mil/cloud_security/Pages/index.aspx**.

Visit the DoD Hub Page**: https://aws.amazon.com/compliance/dod/**

FedRAMP SM

AWS is a Federal Risk and Authorization Management Program (FedRAMPsm) Compliant Cloud Service Provider. AWS has completed the testing performed by a FedRAMPsm accredited Third-Party Assessment Organization (3PAO) and has been granted two Agency Authority to Operate (ATOs) by the US Department of Health and Human Services (HHS) after demonstrating compliance with FedRAMPsm requirements at the Moderate impact level. All U.S. government agencies can leverage the AWS Agency ATO packages stored in the FedRAMPsm repository to evaluate AWS for their applications and workloads, provide authorizations to use AWS, and transition workloads into the AWS environment. The two FedRAMPsm Agency ATOs encompass all U.S. . regions (the AWS GovCloud (US) region and the AWS US East/West regions).

The following services are in the accreditation boundary for the regions stated above:

- Amazon Redshift. Amazon Redshift is a fast, fully managed, petabyte-scale data warehouse service that makes it simple and cost-effective to efficiently analyze all your data using your existing business intelligence tools.
- Amazon Elastic Compute Cloud (Amazon EC2). Amazon EC2 provides resizable compute capacity in the cloud. It is designed to make web-scale computing easier for developers.
- Amazon Simple Storage Service (S3). Amazon S3 provides a simple web services interface that can be used to store and retrieve any amount of data, at any time, from anywhere on the web.
- Amazon Virtual Private Cloud (VPC). Amazon VPC provides the ability for you to provision a logically isolated section of AWS where you can launch AWS resources in a virtual network that you define.
- Amazon Elastic Block Store (EBS). Amazon EBS provides highly available, highly reliable, predictable storage volumes that can be attached to a running Amazon EC2 instance and exposed as a device within the instance.
- AWS Identity and Access Management (IAM). IAM enables you to securely control access to AWS services and resources for your users. Using IAM, you can create and manage AWS users and groups and use permissions to allow and deny their access to AWS resources.

For more information on AWS FedRAMP[sm] compliance please see the AWS FedRAMP[sm] FAQs at: https://aws.amazon.com/compliance/fedramp/

FERPA

The Family Educational Rights and Privacy Act (FERPA) (20 U.S.C. § 1232g; 34 CFR Part 99) is a Federal law that protects the privacy of student education records. The law applies to all schools that receive funds under an applicable program of the U.S. Department of Education. FERPA gives parents certain rights with respect to their children's education records. These rights transfer to the student when he or she reaches the age of 18, or attends a school beyond the high school level. Students to whom the rights have transferred are "eligible students."

AWS enables covered entities and their business associates subject to FERPA to leverage the secure AWS environment to process, maintain, and store protected education information.

AWS also offers a **FERPA-focused whitepaper** for customers interested in learning more about how they can leverage AWS for the processing and storage of educational data.

The "**FERPA Compliance on AWS Whitepaper**" outlines how companies can use AWS to process systems that facilitate FERPA compliance: https://do.awsstatic.com/whitepapers/compliance/AWS_FERPA_Whitepaper.pdf

FIPS 140-2

The Federal Information Processing Standard (FIPS) Publication 140-2 is a US government security standard that specifies the security requirements for cryptographic modules protecting sensitive information. To support customers with FIPS 140-2 requirements, SSL terminations in **AWS GovCloud (US)** operate using FIPS 140-2 validated hardware. AWS works with AWS GovCloud (US) customers to provide the information they need to help manage compliance when using the **AWS GovCloud (US) environment**.

FISMA and DIACAP

AWS enables US government agencies to achieve and sustain compliance with the Federal Information Security Management Act (**FISMA**). The AWS infrastructure has been evaluated by independent assessors for a variety of government systems as part of their system owners' approval process. Numerous Federal Civilian and Department of Defense (DoD) organizations have successfully achieved security authorizations for systems hosted on AWS in accordance with the Risk Management Framework (RMF) process defined in NIST 800-37 and DoD Information Assurance Certification and Accreditation Process (**DIACAP**).

GxP

GxP is an acronym that refers to the regulations and guidelines applicable to life sciences organizations that make food and medical products such as drugs, medical devices, and medical software applications. The overall intent of GxP requirements is to ensure that food and medical products are safe for consumers and to ensure the integrity of data used to make product-related safety decisions.

AWS offers a **GxP whitepaper** which details a comprehensive approach for using AWS for GxP systems. This whitepaper provides guidance for using **AWS Products in the context of GxP** and the content has been developed in conjunction with AWS pharmaceutical and medical device customers, as well as software partners, who are currently using AWS Products in their validated GxP systems.

For more information on the GxP on AWS **please contact AWS Sales and Business Development**.

For additional information please see our GxP Compliance FAQs:
https://aws.amazon.com/compliance/gxp-part-11-annex-11/

HIPAA

AWS enables covered entities and their business associates subject to the U.S. Health Insurance Portability and Accountability Act (HIPAA) to leverage the secure AWS environment to process, maintain, and store protected health information and AWS will be signing business associate agreements with such customers. AWS also offers a HIPAA-focused whitepaper for customers interested in learning more about how they can leverage AWS for the processing and storage of health information. The Architecting for HIPAA Security and Compliance on Amazon Web Services whitepaper outlines how companies can use AWS to process systems that facilitate HIPAA and Health Information Technology for Economic and Clinical Health (HITECH) compliance.

Customers may use any AWS service in an account designated as a HIPAA account, but they should only process, store and transmit PHI in the HIPAA-eligible services defined in the BAA. There are nine HIPAA-eligible services today, including:

- Amazon DynamoDB
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Cloud Compute (EC2)
- Elastic Load Balancing (ELB)
- Amazon Elastic MapReduce (EMR)
- Amazon Glacier
- Amazon Redshift
- Amazon Relational Database Service (Amazon RDS) using only MySQL and Oracle engines
- Amazon Simple Storage Service (S3)

AWS follows a standards-based risk management program to ensure that the HIPAA-eligible services specifically support the security, control, and administrative processes required under HIPAA. Using these services to store and process PHI allows our customers and AWS to address the HIPAA requirements applicable to our utility-based operating model. AWS prioritizes and adds new eligible services based on customer demand.

For additional information please see our HIPAA Compliance FAQs:
https://aws.amazon.com/compliance/hipaa-compliance/

Architecting for HIPAA Security and Compliance on Amazon Web Services:
https://do.awsstatic.com/whitepapers/compliance/AWS_HIPAA_Compliance_Whitepaper.pdf

IRAP

The Information Security Registered Assessors Program (IRAP) enables Australian government customers to validate that appropriate controls are in place and determine the appropriate responsibility model for addressing the needs of the Australian Signals Directorate (ASD) Information Security Manual (ISM).

Amazon Web Services **has completed an independent assessmen**t that has determined all applicable ISM controls are in place relating to the processing, storage and transmission of Unclassified (DLM) for the AWS Sydney Region.

IRAP Compliance FAQs:
https://aws.amazon.com/compliance/irap/

For more information see: **Appendix B: AWS alignment with the Australian Signals Directorate (ASD) Cloud Computing Security Considerations**

ISO 9001

AWS has achieved ISO 9001 certification, AWS' ISO 9001 certification directly supports customers who develop, migrate and operate their quality-controlled IT systems in the AWS cloud. Customers can leverage AWS' compliance reports as evidence for their own ISO 9001 programs and industry-specific quality programs, such as GxP in life sciences, ISO 13485 in medical devices, AS9100 in aerospace, and ISO/TS 16949 in automotive. AWS customers who don't have quality system requirements will still benefit from the additional assurance and transparency that an ISO 9001 certification provides.
The ISO 9001 certification covers the quality management system over a specified scope of AWS services and Regions of operations (below) and services including:

- AWS CloudFormation
- AWS Cloud Hardware Security Model (HSM)
- Amazon CloudFront
- AWS CloudTrail
- AWS Direct Connect
- AWS Directory Service
- Amazon DynamoDB
- Amazon EC2 VM Import/Export
- AWS Elastic Beanstalk
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Cloud Compute (EC2)

- Amazon EC2 Container Service (ECS)
- Amazon Elastic File System (EFS)
- Elastic Load Balancing (ELB)
- Amazon Elastic MapReduce (EMR)
- Amazon ElastiCache
- Amazon Glacier
- AWS Identity and Access Management (IAM)
- AWS Key Management Service (KMS)
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- AWS Route 53
- Amazon SimpleDB
- Amazon Simple Email Service (SES)
- Amazon Simple Queue Service (SQS)
- Amazon Simple Storage Service (S3)
- AWS Storage Gateway
- Amazon Simple Workflow Service (SWF)
- Amazon Virtual Private Cloud (VPC)
- AWS WAF - Web Application Firewall
- Amazon WorkDocs
- Amazon WorkMail
- Amazon WorkSpaces
- The underlying physical infrastructure and the AWS Management Environment

AWS' ISO 9001 accreditation covers AWS Regions including US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US), South America (Sao Paulo), EU (Ireland), EU (Frankfurt) and Asia Pacific (Singapore), Asia Pacific (Sydney), and Asia Pacific (Tokyo).

ISO 9001:2008 is a global standard for managing the quality of products and services. The 9001 standard outlines a quality management system based on eight principles defined by the International Organization for Standardization (ISO) Technical Committee for Quality Management and Quality Assurance. They include:

- Customer focus
- Leadership
- Involvement of people
- Process approach
- System approach to management
- Continual Improvement
- Factual approach to decision-making
- Mutually beneficial supplier relationships

The AWS ISO 9001 certification can be downloaded at:
https://do.awsstatic.com/certifications/iso_9001_certification.pdf

AWS provides additional information and frequently asked questions about its ISO 9001 certification at:
https://aws.amazon.com/compliance/iso-9001-faqs/

ISO 27001

AWS has achieved ISO 27001 certification of our Information Security Management System (ISMS) covering AWS infrastructure, data centers, and services including:

- AWS CloudFormation
- Amazon CloudFront
- AWS Cloudtrail
- AWS Directory Service
- Amazon DynamoDB
- AWS Elastic Beanstalk
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Cloud Compute (EC2)
- Amazon EC2 Container Service (ECS)
- AWS Direct Connect
- Amazon EC2 VM Import/Export
- AWS Cloud Hardware Security Model (HSM)
- Elastic Load Balancing (ELB)
- Amazon Elastic File System (EFS)
- Amazon Elastic MapReduce (EMR)
- Amazon ElastiCache
- Amazon Glacier
- AWS Identity and Access Management (IAM)
- AWS Key Management Service (KMS)
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- AWS Route 53
- Amazon SimpleDB
- Amazon Simple Email Service (SES)
- Amazon Simple Queue Service (SQS)
- Amazon Simple Storage Service (S3)
- Amazon Simple Workflow Service (SWF)
- AWS Storage Gateway
- Amazon Virtual Private Cloud (VPC)
- AWS WAF - Web Application Firewall
- Amazon WorkDocs
- Amazon WorkMail
- Amazon WorkSpaces
- The underlying physical infrastructure (including GovCloud) and the AWS Management Environment

ISO 27001/27002 is a widely-adopted global security standard that sets out requirements and best practices for a systematic approach to managing company and customer information that's based on periodic risk assessments appropriate to ever-changing threat scenarios. In order to achieve the certification, a company must show it has a systematic and ongoing approach to managing information security risks that affect the confidentiality, integrity, and availability of company and customer information. This certification reinforces Amazon's commitment to providing significant information regarding our security controls and practices.

AWS' ISO 27001 accreditation covers AWS Regions including US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US), South America (Sao Paulo), EU (Ireland), EU (Frankfurt), Asia Pacific (Singapore), Asia Pacific (Sydney), and Asia Pacific (Tokyo).

The AWS ISO 27001 certification can be downloaded at:
https://d0.awsstatic.com/certifications/iso_27001_global_certification.pdf

AWS provides additional information and frequently asked questions about its ISO 27001 certification at:
https://aws.amazon.com/compliance/iso-27001-faqs/

ISO 27017

ISO 27017 is the newest code of practice released by the International Organization for Standardization (ISO). It provides implementation guidance on information security controls that specifically relate to cloud services.

AWS has achieved ISO 27017 certification of our Information Security Management System (ISMS) covering AWS infrastructure, data centers, and services including:

- Amazon CloudFront
- Amazon DynamoDB
- Amazon EC2 Container Service (ECS)
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Compute Cloud (EC2)
- Amazon Elastic File System (EFS)
- Amazon Elastic MapReduce (EMR)
- Amazon ElastiCache
- Amazon Glacier
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- Amazon Route 53
- Amazon Simple Email Service (SES)
- Amazon Simple Queue Service (SQS)
- Amazon Simple Storage Service (S3)
- Amazon Simple Workflow Service (SWF)
- Amazon SimpleDB
- Amazon Virtual Private Cloud (VPC)
- Amazon WorkDocs
- Amazon WorkMail
- Amazon WorkSpaces
- AWS CloudFormation
- AWS CloudHSM
- AWS CloudTrail
- AWS Direct Connect
- AWS Directory Service
- AWS Elastic Beanstalk
- AWS Identity and Access Management (IAM)
- AWS Key Management Service (KMS)
- AWS Storage Gateway
- AWS WAF (Web Application Firewall)
- Elastic Load Balancing
- VM Import/Export

The AWS ISO 27017 certification can be downloaded at:
https://d0.awsstatic.com/certifications/iso_27017_certification.pdf

AWS provides additional information and frequently asked questions about its ISO 27017 certification at:
https://aws.amazon.com/compliance/iso-27017-faqs/

ISO 27018

ISO 27018 is the first International code of practice that focuses on protection of personal data in the cloud. It is based on ISO information security standard 27002 and provides implementation guidance on ISO 27002 controls applicable to public cloud Personally Identifiable Information (PII). It also provides a set of additional controls and associated guidance intended to address public cloud PII protection requirements not addressed by the existing ISO 27002 control set.

AWS has achieved ISO 27018 certification of our Information Security Management System (ISMS) covering AWS infrastructure, data centers, and services including:

- Amazon CloudFront
- Amazon DynamoDB
- Amazon EC2 Container Service (ECS)
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Compute Cloud (EC2)
- Amazon Elastic File System (EFS)
- Amazon Elastic MapReduce (EMR)
- Amazon ElastiCache
- Amazon Glacier
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- Amazon Route 53
- Amazon Simple Email Service (SES)
- Amazon Simple Queue Service (SQS)
- Amazon Simple Storage Service (S3)
- Amazon Simple Workflow Service (SWF)
- Amazon SimpleDB
- Amazon Virtual Private Cloud (VPC)
- Amazon WorkDocs
- Amazon WorkMail
- Amazon WorkSpaces
- AWS CloudFormation
- AWS CloudHSM
- AWS CloudTrail
- AWS Direct Connect
- AWS Directory Service
- AWS Elastic Beanstalk
- AWS Identity and Access Management (IAM)
- AWS Key Management Service (KMS)
- AWS Storage Gateway
- AWS WAF (Web Application Firewall)
- Elastic Load Balancing
- VM Import/Export

The AWS ISO 27018 certification can be downloaded at:
https://d0.awsstatic.com/certifications/iso_27018_certification.pdf

AWS provides additional information and frequently asked questions about its ISO 27018 certification at:
https://aws.amazon.com/compliance/iso-27018-faqs/

ITAR

The **AWS GovCloud (US)** region supports US International Traffic in Arms Regulations (**ITAR**) compliance. As a part of managing a comprehensive ITAR compliance program, companies subject to ITAR export regulations must control unintended exports by restricting access to protected data to US Persons and restricting physical location of that data to the US. AWS GovCloud (US) provides an environment physically located in the US and where access by AWS Personnel is limited to US Persons, thereby allowing qualified companies to transmit, process, and store protected articles and data subject to ITAR restrictions. The AWS GovCloud (US) environment has been audited by an independent third-party to validate the proper controls are in place to support customer export compliance programs for this requirement.

MPAA

The Motion Picture Association of America (MPAA) has established a set of best practices for securely storing, processing and delivering protected media and content (http://www.fightfilmtheft.org/facility-security-program.html). Media companies use these best practices as a way to assess risk and security of their content and infrastructure. AWS has demonstrated alignment with the MPAA best practices and the AWS infrastructure is compliant with all applicable MPAA infrastructure controls. While the MPAA does not offer a "certification," media industry customers can use the AWS MPAA documentation to augment their risk assessment and evaluation of MPAA-type content on AWS.

See the AWS Compliance MPAA hub page for additional details:
https://aws.amazon.com/compliance/mpaa/

MTCS Tier 3 Certification

The **Multi-Tier Cloud Security (MTCS)** is an operational Singapore security management Standard (SPRING SS 584:2013), based on ISO 27001/02 Information Security Management System (ISMS) standards. The certification assessment requires us to:

- Systematically evaluate our information security risks, taking into account the impact of company threats and vulnerabilities
- Design and implement a comprehensive suite of information security controls and other forms of risk management to address company and architecture security risks
- Adopt an overarching management process to ensure that the information security controls meet the our information security needs on an ongoing basis

View the MTCS Hub Page at:
https://aws.amazon.com/compliance/aws-multitiered-cloud-security-standard-certification/

NIST

In June 2015 The National Institute of Standards and Technology (NIST) released guidelines **800-171,** "Final Guidelines for Protecting Sensitive Government Information Held by Contractors". This guidance is applicable to the protection of Controlled Unclassified Information (CUI) on nonfederal systems.

AWS is already compliant with these guidelines, and customers can effectively comply with NIST 800-171 immediately. NIST 800-171 outlines a subset of the NIST 800-53 requirements, a guideline under which AWS has already been audited under the FedRAMP program. The FedRAMP Moderate security control baseline is more rigorous than the recommended requirements established in Chapter 3 of 800-171, and includes a significant number of security controls above and beyond those required of FISMA Moderate systems that

protect CUI data. A detailed mapping is available in the **NIST Special Publication 800-171**, starting on page D2 (which is page 37 in the PDF).

PCI DSS Level 1

AWS is Level 1 compliant under the Payment Card Industry (PCI) Data Security Standard (DSS). Customers can run applications on our PCI-compliant technology infrastructure for storing, processing, and transmitting credit card information in the cloud. In February 2013, the PCI Security Standards Council released PCI DSS Cloud Computing Guidelines. These guidelines provide customers who are managing a cardholder data environment with considerations for maintaining PCI DSS controls in the cloud. AWS has incorporated the PCI DSS Cloud Computing Guidelines into the AWS PCI Compliance Package for customers. The AWS PCI Compliance Package includes the AWS PCI Attestation of Compliance (AoC), which shows that AWS has been successfully validated against standards applicable to a Level 1 service provider under PCI DSS Version 3.1, and the AWS PCI Responsibility Summary, which explains how compliance responsibilities are shared between AWS and our customers in the cloud.

The following services are in scope for PCI DSS Level 1:

- Auto Scaling
- AWS CloudFormation
- Amazon CloudFront
- AWS CloudHSM
- AWS CloudTrail
- AWS Direct Connect
- Amazon DynamoDB
- AWS Elastic Beanstalk
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Compute Cloud (EC2)
- Elastic Load Balancing (ELB)
- Amazon Elastic MapReduce (EMR)
- Amazon Glacier
- AWS Key Management Service (KMS)
- AWS Identity and Access Management (IAM)
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- Amazon Route 53
- Amazon SimpleDB
- Amazon Simple Storage Service (S3)
- Amazon Simple Queue Service (SQS)
- Amazon Simple Workflow Service SWF
- Amazon Virtual Private Cloud (VPC)
- The underlying physical infrastructure (including GovCloud) and the AWS Management Environment

The latest scope of services and regions for the AWS PCI DSS Level 1 certification can be found at: https://aws.amazon.com/compliance/pci-dss-level-1-faqs/

SOC 1/ISAE 3402

Amazon Web Services publishes a Service Organization Controls 1 (SOC 1), Type II report. The audit for this report is conducted in accordance with American Institute of Certified Public Accountants (AICPA): AT 801

(formerly SSAE 16) and the International Standards for Assurance Engagements No. 3402 (ISAE 3402). This dual-standard report is intended to meet a broad range of financial auditing requirements for U.S. and international auditing bodies. The SOC 1 report audit attests that AWS' control objectives are appropriately designed and that the individual controls defined to safeguard customer data are operating effectively. This report is the replacement of the Statement on Auditing Standards No. 70 (SAS 70) Type II Audit report.

The AWS SOC 1 control objectives are provided here. The report itself identifies the control activities that support each of these objectives and the independent auditor's results of their testing procedures of each control.

Objective Area	Objective Description
Security Organization	Controls provide reasonable assurance that information security policies have been implemented and communicated throughout the organization.
Employee User Access	Controls provide reasonable assurance that procedures have been established so that Amazon employee user accounts are added, modified and deleted in a timely manner and reviewed on a periodic basis.
Logical Security	Controls provide reasonable assurance that policies and mechanisms are in place to appropriately restrict unauthorized internal and external access to data and customer data is appropriately segregated from other customers.
Secure Data Handling	Controls provide reasonable assurance that data handling between the customer's point of initiation to an AWS storage location is secured and mapped accurately.
Physical Security and Environmental Protection	Controls provide reasonable assurance that physical access to data centers is restricted to authorized personnel and that mechanisms are in place to minimize the effect of a malfunction or physical disaster to data center facilities.
Change Management	Controls provide reasonable assurance that changes (including emergency / non-routine and configuration) to existing IT resources are logged, authorized, tested, approved and documented.
Data Integrity, Availability and Redundancy	Controls provide reasonable assurance that data integrity is maintained through all phases including transmission, storage and processing.
Incident Handling	Controls provide reasonable assurance that system incidents are recorded, analyzed, and resolved.

The SOC 1 reports are designed to focus on controls at a service organization that are likely to be relevant to an audit of a user entity's financial statements. As AWS' customer base is broad, and the use of AWS services is equally as broad, the applicability of controls to customer financial statements varies by customer. Therefore, the AWS SOC 1 report is designed to cover specific key controls likely to be required during a financial audit, as well as covering a broad range of IT general controls to accommodate a wide range of usage and audit scenarios. This allows customers to leverage the AWS infrastructure to store and process critical data, including that which is integral to the financial reporting process. AWS periodically reassesses the selection of these controls to consider customer feedback and usage of this important audit report.

AWS' commitment to the SOC 1 report is ongoing, and AWS will continue the process of periodic audits. The SOC 1 report scope covers:

- AWS CloudFormation
- AWS CloudHSM
- AWS CloudTrail

- AWS Direct Connect
- Amazon DynamoDB
- Amazon EC2 VM Import/Export
- Amazon Elastic Beanstalk
- Amazon Elastic Block Store (EBS)
- Amazon ElastiCache
- Amazon Elastic Compute Cloud (EC2)
- Amazon Elastic Load Balancing (ELB)
- Amazon Elastic MapReduce (EMR)
- Amazon Glacier
- AWS Identity and Access Management (IAM)
- AWS Key Management Service (KMS)
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- Amazon Route 53
- Amazon SimpleDB
- Amazon Simple Email Service (SES)
- Amazon Simple Storage Service (S3)
- Amazon Simple Workflow (SWF)
- Amazon Simple Queue Service (SQS)
- AWS Storage Gateway
- Amazon Virtual Private Cloud (VPC)
- Amazon Workspaces

SOC 2

In addition to the SOC 1 report, AWS publishes a Service Organization Controls 2 (SOC 2), Type II report. Similar to the SOC 1 in the evaluation of controls, the SOC 2 report is an attestation report that expands the evaluation of controls to the criteria set forth by the American Institute of Certified Public Accountants (AICPA) Trust Services Principles. These principles define leading practice controls relevant to security, availability, processing integrity, confidentiality, and privacy applicable to service organizations such as AWS. The AWS SOC 2 is an evaluation of the design and operating effectiveness of controls that meet the criteria for the security and availability principles set forth in the AICPA's Trust Services Principles criteria. This report provides additional transparency into AWS security and availability based on a pre-defined industry standard of leading practices and further demonstrates AWS' commitment to protecting customer data. The SOC 2 report scope covers the same services covered in the SOC 1 report. See the SOC 1 description above for the in-scope services.

SOC 3

AWS publishes a Service Organization Controls 3 (SOC 3) report. The SOC 3 report is a publically-available summary of the AWS SOC 2 report. The report includes the external auditor's opinion of the operation of controls (based on the AICPA's Security Trust Principles included in the SOC 2 report), the assertion from AWS management regarding the effectiveness of controls, and an overview of AWS Infrastructure and Services. The AWS SOC 3 report includes all AWS data centers worldwide that support in-scope services. This is a great resource for customers to validate that AWS has obtained external auditor assurance without going through the process to request a SOC 2 report. The SOC 3 report scope covers the same services covered in the SOC 1 report. See the SOC 1 description above for the in-scope services. View the AWS SOC 3 report here.

Key Compliance Questions and AWS

This section addresses generic cloud computing compliance questions specifically for AWS. These common compliance questions listed may be of interest when evaluating and operating in a cloud computing environment and may assist in AWS customers' control management efforts.

Ref	Cloud Computing Question	AWS Information
1	Control ownership. Who owns which controls for cloud-deployed infrastructure?	For the portion deployed into AWS, AWS controls the physical components of that technology. The customer owns and controls everything else, including control over connection points and transmissions. To help customers better understand what controls we have in place and how effectively they are operating, we publish a SOC 1 Type II report with controls defined around EC2, S3 and VPC, as well as detailed physical security and environmental controls. These controls are defined at a high level of specificity that should meet most customer needs. AWS customers that have signed a non-disclosure agreement with AWS may request a copy of the SOC 1 Type II report.
2	Auditing IT. How can auditing of the cloud provider be accomplished?	Auditing for most layers and controls above the physical controls remains the responsibility of the customer. The definition of AWS-defined logical and physical controls is documented in the SOC 1 Type II report, and the report is available for review by audit and compliance teams. AWS ISO 27001 and other certifications are also available for auditors to review.
3	Sarbanes-Oxley compliance. How is SOX compliance achieved if in-scope systems are deployed in the cloud provider environment?	If a customer processes financial information in the AWS cloud, the customer's auditors may determine that some AWS systems come into scope for Sarbanes-Oxley (SOX) requirements. The customer's auditors must make their own determination regarding SOX applicability. Because most of the logical access controls are managed by customer, the customer is best positioned to determine if its control activities meet relevant standards. If the SOX auditors request specifics regarding AWS' physical controls, they can reference the AWS SOC 1 Type II report which details the controls that AWS provides.
4	HIPAA compliance. Is it possible to meet HIPAA compliance requirements while deployed in the cloud provider environment?	HIPAA requirements apply to and are controlled by the AWS customer. The AWS platform allows for the deployment of solutions that meet industry-specific certification requirements such as HIPAA. Customers can use AWS services to maintain a security level that is equivalent or greater than those required to protect electronic health records. Customers have built healthcare applications compliant with HIPAA's Security and Privacy Rules on AWS. AWS provides additional information about HIPAA compliance on its web site, including a whitepaper on this topic.
5	GLBA compliance. Is it possible to meet GLBA certification requirements while deployed in the cloud provider environment?	Most GLBA requirements are controlled by the AWS customer. AWS provides means for customers to protect data, manage permissions, and build GLBA-compliant applications on AWS infrastructure. If the customer requires specific assurance that physical security controls are operating effectively, they can reference the AWS SOC 1 Type II report as relevant.

Ref	Cloud Computing Question	AWS Information
6	Federal regulation compliance. Is it possible for a US Government agency to be compliant with security and privacy regulations while deployed in the cloud provider environment?	US Federal agencies can be compliant under a number of compliance standards, including the Federal Information Security Management Act (FISMA) of 2002, Federal Risk and Authorization Management Program (FedRAMP), the Federal Information Processing Standard (FIPS) Publication 140-2, and the International Traffic in Arms Regulations (ITAR). Compliance with other laws and statutes may also be accommodated depending on the requirements set forth in the applicable legislation.
7	Data location. Where does customer data reside?	AWS customers designate in which physical region their data and their servers will be located. Data replication for S3 data objects is done within the regional cluster in which the data is stored and is not replicated to other data center clusters in other regions. AWS customers designate in which physical region their data and their servers will be located. AWS will not move customers' content from the selected Regions without notifying the customer, unless required to comply with the law or requests of governmental entities. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US) (Oregon), EU (Frankfurt), EU (Ireland), Asia Pacific (Seoul), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing), and South America (Sao Paulo).
8	E-Discovery. Does the cloud provider meet the customer's needs to meet electronic discovery procedures and requirements?	AWS provides infrastructure, and customers manage everything else, including the operating system, the network configuration, and the installed applications. Customers are responsible for responding appropriately to legal procedures involving the identification, collection, processing, analysis, and production of electronic documents they store or process using AWS. Upon request, AWS may work with customers who require AWS' assistance in legal proceedings.
9	Data center tours. Are data center tours by customers allowed by the cloud provider?	No. Due to the fact that our data centers host multiple customers, AWS does not allow data center tours by customers, as this exposes a wide range of customers to physical access of a third party. To meet this customer need, an independent and competent auditor validates the presence and operation of controls as part of our SOC 1 Type II report. This broadly accepted third-party validation provides customers with the independent perspective of the effectiveness of controls in place. AWS customers that have signed a non-disclosure agreement with AWS may request a copy of the SOC 1 Type II report. Independent reviews of data center physical security is also a part of the ISO 27001 audit, the PCI assessment, ITAR audit, and the FedRAMP[sm] testing programs.
10	Third-party access. Are third parties allowed access to the cloud provider data centers?	AWS strictly controls access to data centers, even for internal employees. Third parties are not provided access to AWS data centers except when explicitly approved by the appropriate AWS data center manager per the AWS access policy. See the SOC 1 Type II report for specific controls related to physical access, data center access authorization, and other related controls.

Ref	Cloud Computing Question	AWS Information
11	Privileged actions. Are privileged actions monitored and controlled?	Controls in place limit access to systems and data and provide that access to systems or data is restricted and monitored. In addition, customer data is and server instances are logically isolated from other customers by default. Privileged user access control is reviewed by an independent auditor during the AWS SOC 1, ISO 27001, PCI, ITAR, and FedRAMPsm audits.
12	Insider access. Does the cloud provider address the threat of inappropriate insider access to customer data and applications?	AWS provides specific SOC 1 controls to address the threat of inappropriate insider access, and the public certification and compliance initiatives covered in this document address insider access. All certifications and third-party attestations evaluate logical access preventative and detective controls. In addition, periodic risk assessments focus on how insider access is controlled and monitored.
13	Multi-tenancy. Is customer segregation implemented securely?	The AWS environment is a virtualized, multi-tenant environment. AWS has implemented security management processes, PCI controls, and other security controls designed to isolate each customer from other customers. AWS systems are designed to prevent customers from accessing physical hosts or instances not assigned to them by filtering through the virtualization software. This architecture has been validated by an independent PCI Qualified Security Assessor (QSA) and was found to be in compliance with all requirements of PCI DSS version 3.1 published in April 2015. Note that AWS also has single-tenancy options. Dedicated Instances are Amazon EC2 instances launched within your Amazon Virtual Private Cloud (Amazon VPC) that run hardware dedicated to a single customer. Dedicated Instances let you take full advantage of the benefits of Amazon VPC and the AWS cloud while isolating your Amazon EC2 compute instances at the hardware level.
14	Hypervisor vulnerabilities. Has the cloud provider addressed known hypervisor vulnerabilities?	Amazon EC2 currently utilizes a highly customized version of the Xen hypervisor. The hypervisor is regularly assessed for new and existing vulnerabilities and attack vectors by internal and external penetration teams, and is well suited for maintaining strong isolation between guest virtual machines. The AWS Xen hypervisor security is regularly evaluated by independent auditors during assessments and audits. See the AWS security whitepaper for more information on the Xen hypervisor and instance isolation.
15	Vulnerability management. Are systems patched appropriately?	AWS is responsible for patching systems supporting the delivery of service to customers, such as the hypervisor and networking services. This is done as required per AWS policy and in accordance with ISO 27001, NIST, and PCI requirements. Customers control their own guest operating systems, software and applications and are therefore responsible for patching their own systems.
16	Encryption. Do the provided services support encryption?	Yes. AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS, SimpleDB, and EC2. IPSec tunnels to VPC are also encrypted. Amazon S3 also offers Server Side Encryption as an option for customers. Customers may also use third-party encryption technologies. Refer to the AWS Security white paper for more information.

Ref	Cloud Computing Question	AWS Information
17	Data ownership. What are the cloud provider's rights over customer data?	AWS customers retain control and ownership of their data. AWS errs on the side of protecting customer privacy and is vigilant in determining which law enforcement requests we must comply with. AWS does not hesitate to challenge orders from law enforcement if we think the orders lack a solid basis.
18	Data isolation. Does the cloud provider adequately isolate customer data?	All data stored by AWS on behalf of customers has strong tenant isolation security and control capabilities. Amazon S3 provides advanced data access controls. Please see the AWS security whitepaper for more information about specific data services' security.
19	Composite services. Does the cloud provider layer its service with other providers' cloud services?	AWS does not leverage any third-party cloud providers to deliver AWS services to customers.
20	Physical and environmental controls. Are these controls operated by the cloud provider specified?	Yes. These are specifically outlined in the SOC 1 Type II report. In addition, other certifications AWS supports such as ISO 27001 and FedRAMP[sm] require best practice physical and environmental controls.
21	Client-side protection. Does the cloud provider allow customers to secure and manage access from clients, such as PC and mobile devices?	Yes. AWS allows customers to manage client and mobile applications to their own requirements.
22	Server security. Does the cloud provider allow customers to secure their virtual servers?	Yes. AWS allows customers to implement their own security architecture. See the AWS security whitepaper for more details on server and network security.
23	Identity and Access Management. Does the service include IAM capabilities?	AWS has a suite of identity and access management offerings, allowing customers to manage user identities, assign security credentials, organize users in groups, and manage user permissions in a centralized way. Please see the AWS web site for more information.
24	Scheduled maintenance outages. Does the provider specify when systems will be brought down for maintenance?	AWS does not require systems to be brought offline to perform regular maintenance and system patching. AWS' own maintenance and system patching generally do not impact customers. Maintenance of instances themselves is controlled by the customer.
25	Capability to scale. Does the provider allow customers to scale beyond the original agreement?	The AWS cloud is distributed, highly secure and resilient, giving customers massive scale potential. Customers may scale up or down, paying for only what they use.
26	Service availability. Does the provider commit to a high level of availability?	AWS does commit to high levels of availability in its service level agreements (SLA). For example, Amazon EC2 commits to annual uptime percentage of at least 99.95% during the service year. Amazon S3 commits to monthly uptime percentage of at least 99.9%. Service credits are provided in the case these availability metrics are not met.

Ref	Cloud Computing Question	AWS Information
27	Distributed Denial Of Service (DDoS) attacks. How does the provider protect their service against DDoS attacks?	The AWS network provides significant protection against traditional network security issues and the customer can implement further protection. See the AWS Security Whitepaper for more information on this topic, including a discussion of DDoS attacks.
28	Data portability. Can the data stored with a service provider be exported by customer request?	AWS allows customers to move data as needed on and off AWS storage. AWS Import/Export service for S3 accelerates moving large amounts of data into and out of AWS using portable storage devices for transport.
29	Service provider business continuity. Does the service provider operate a business continuity program?	AWS does operate a business continuity program. Detailed information is provided in the AWS Security Whitepaper.
30	Customer business continuity. Does the service provider allow customers to implement a business continuity plan?	AWS provides customers with the capability to implement a robust continuity plan, including the utilization of frequent server instance back-ups, data redundancy replication, and multi-region/availability zone deployment architectures.
31	Data durability. Does the service specify data durability?	Amazon S3 provides a highly durable storage infrastructure. Objects are redundantly stored on multiple devices across multiple facilities in an Amazon S3 Region. Once stored, Amazon S3 maintains the durability of objects by quickly detecting and repairing any lost redundancy. Amazon S3 also regularly verifies the integrity of data stored using checksums. If corruption is detected, it is repaired using redundant data. Data stored in S3 is designed to provide 99.999999999% durability and 99.99% availability of objects over a given year.
32	Backups. Does the service provide backups to tapes?	AWS allows customers to perform their own backups to tapes using their own tape backup service provider. However, a tape backup is not a service provided by AWS. Amazon S3 service is designed to drive the likelihood of data loss to near zero percent and the durability equivalent of multi-site copies of data objects is achieved through data storage redundancy. For information on data durability and redundancy, please refer to the AWS web site.
33	Price increases. Will the service provider raise prices unexpectedly?	AWS has a history of frequently reducing prices as the cost to provide these services reduces over time. AWS has reduced prices consistently over the past several years.
34	Sustainability. Does the service provider company have long term sustainability potential?	AWS is a leading cloud provider and is a long-term business strategy of Amazon.com. AWS has very high long term sustainability potential.

AWS Contact

Customers can request the reports and certifications produced by our third-party auditors or can request more information about AWS Compliance by contacting AWS Sales and Business Development. The representative will route customers to the proper team depending on nature of the inquiry. For additional information on AWS Compliance, see the AWS Compliance site or send questions directly to awscompliance@amazon.com.

Appendix A: CSA Consensus Assessments Initiative Questionnaire v3.0.1

The Cloud Security Alliance (CSA) is a "not-for-profit organization with a mission to promote the use of best practices for providing security assurance within Cloud Computing, and to provide education on the uses of Cloud Computing to help secure all other forms of computing." [Reference https://cloudsecurityalliance.org/about/] A wide range of industry security practitioners, corporations, and associations participate in this organization to achieve its mission.

The CSA Consensus Assessments Initiative Questionnaire provides a set of questions the CSA anticipates a cloud consumer and/or a cloud auditor would ask of a cloud provider. It provides a series of security, control, and process questions which can then be used for a wide range of uses, including cloud provider selection and security evaluation. AWS has completed this questionnaire with the answers below.

Control Group	CID	Consensus Assessment Questions	AWS Response
Application & Interface Security *Application Security*	AIS-01.1	Do you use industry standards (Build Security in Maturity Model [BSIMM] benchmarks, Open Group ACS Trusted Technology Provider Framework, NIST, etc.) to build in security for your Systems/Software Development Lifecycle (SDLC)?	The AWS system development lifecycle incorporates industry best practices which include formal design reviews by the AWS Security Team, threat modeling and completion of a risk assessment. Refer to the AWS Overview of Security Processes for further details. AWS has in place procedures to manage new development of resources. Refer to ISO 27001 standard, Annex A, domain 14 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	AIS-01.2	Do you use an automated source code analysis tool to detect security defects in code prior to production?	
	AIS-01.3	Do you use manual source-code analysis to detect security defects in code prior to production?	
	AIS-01.4	Do you verify that all of your software suppliers adhere to industry standards for Systems/Software Development Lifecycle (SDLC) security?	
	AIS-01.5	(SaaS only) Do you review your applications for security vulnerabilities and address any issues prior to deployment to production?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Application & Interface Security *Customer Access Requirements*	AIS-02.1	Are all identified security, contractual and regulatory requirements for customer access contractually addressed and remediated prior to granting customers access to data, assets and information systems?	AWS Customers retain responsibility to ensure their usage of AWS is in compliance with applicable laws and regulations. AWS communicates its security and control environment to customers through industry certifications and third-party attestations, white papers (available at http://aws.amazon.com/compliance) and providing certifications, reports and other relevant documentation directly to AWS Customers.
	AIS-02.2	Are all requirements and trust levels for customers' access defined and documented?	
Application & Interface Security *Data Integrity*	AIS-03.1	Are data input and output integrity routines (i.e., reconciliation and edit checks) implemented for application interfaces and databases to prevent manual or systematic processing errors or corruption of data?	AWS data integrity controls as described in AWS SOC reports illustrates the data integrity controls maintained through all phases including transmission, storage and processing. In addition, refer to ISO 27001 standard, Annex A, domain 14 for further information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Application & Interface Security *Data Security / Integrity*	AIS-04.1	Is your Data Security Architecture designed using an industry standard (e.g., CDSA, MULITSAFE, CSA Trusted Cloud Architectural Standard, FedRAMP, CAESARS)?	AWS Data Security Architecture was designed to incorporate industry leading practices. Refer to AWS Certifications, reports and whitepapers for additional details on the various leading practices that AWS adheres to (available at http://aws.amazon.com/compliance).
Audit Assurance & Compliance *Audit Planning*	AAC-01.1	Do you produce audit assertions using a structured, industry accepted format (e.g., CloudAudit/A6 URI Ontology, CloudTrust, SCAP/CYBEX, GRC XML, ISACA's Cloud Computing Management Audit/Assurance Program, etc.)?	AWS obtains certain industry certifications and independent third-party attestations and provides certain certifications, reports and other relevant documentation directly to AWS Customers.
Audit Assurance & Compliance *Independent Audits*	AAC-02.1	Do you allow tenants to view your SOC2/ISO 27001 or similar third-party audit or certification reports?	AWS provides third-party attestations, certifications, Service Organization Controls (SOC) reports and other relevant compliance reports directly to our customers under NDA. The AWS ISO 27001 certification can be downloaded here: http://do.awsstatic.com/certifications/iso_27001_global_certification.pdf. The AWS SOC 3 report can be downloaded here: https://do.awsstatic.com/whitepapers/compliance/soc3_amazon_web_services.pdf. AWS Security regularly scans all Internet facing service endpoint IP addresses for vulnerabilities (these scans do not include customer instances). AWS Security notifies the appropriate parties to remediate any identified vulnerabilities. In addition, external vulnerability threat
	AAC-02.2	Do you conduct network penetration tests of your cloud service infrastructure regularly as prescribed by industry best practices and guidance?	
	AAC-02.3	Do you conduct application penetration tests of your cloud infrastructure regularly as prescribed by industry best practices and guidance?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	AAC-02.4	Do you conduct internal audits regularly as prescribed by industry best practices and guidance?	assessments are performed regularly by independent security firms. Findings and recommendations resulting from these assessments are categorized and delivered to AWS leadership. In addition, the AWS control environment is subject to regular internal and external audits and risk assessments. AWS engages with external certifying bodies and independent auditors to review and test the AWS overall control environment.
	AAC-02.5	Do you conduct external audits regularly as prescribed by industry best practices and guidance?	
	AAC-02.6	Are the results of the penetration tests available to tenants at their request?	
	AAC-02.7	Are the results of internal and external audits available to tenants at their request?	
	AAC-02.8	Do you have an internal audit program that allows for cross-functional audit of assessments?	
Audit Assurance & Compliance *Information System Regulatory Mapping*	AAC-03.1	Do you have the ability to logically segment or encrypt customer data such that data may be produced for a single tenant only, without inadvertently accessing another tenant's data?	All data stored by AWS on behalf of customers has strong tenant isolation security and control capabilities. Customers retain control and ownership of their data, thus it is their responsibility to choose to encrypt the data. AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS, SimpleDB and EC2. IPSec tunnels to VPC are also encrypted. In addition, customers can leverage AWS Key Management Systems (KMS) to create and control encryption keys (refer to https://aws.amazon.com/kms/). Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security AWS allows customers to perform their own backups to tapes using their own tape backup service provider. However, a tape backup is not a service provided by AWS. Amazon S3 and Glacier services are designed to drive the likelihood of data loss to near zero percent and the durability equivalent of multi-site copies of data objects is achieved through data storage redundancy. For information on data durability and redundancy, please refer to the AWS website.
	AAC-03.2	Do you have capability to recover data for a specific customer in the case of a failure or data loss?	
	AAC-03.3	Do you have the capability to restrict the storage of customer data to specific countries or geographic locations?	AWS Customers designate in which physical region their content will be located. AWS will not move customers' content from the selected regions without notifying the customer, unless required to comply with the law or requests of governmental entities. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US)(Oregon), EU (Ireland), EU (Frankfurt), Asia Pacific (Seoul), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing) Region, and South America (Sao Paulo).

Control Group	CID	Consensus Assessment Questions	AWS Response
	AAC-03.4	Do you have a program in place that includes the ability to monitor changes to the regulatory requirements in relevant jurisdictions, adjust your security program for changes to legal requirements, and ensure compliance with relevant regulatory requirements?	AWS monitors relevant legal and regulatory requirements. Refer to ISO 27001 standard Annex 18 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Business Continuity Management & Operational Resilience *Business Continuity Planning*	BCR-01.1	Do you provide tenants with geographically resilient hosting options?	Data centers are built in clusters in various global regions. AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Customers should architect their AWS usage to take advantage of multiple Regions and Availability Zones. Refer to AWS Overview of Cloud Security whitepaper for additional details - available at http://aws.amazon.com/security.
	BCR-01.2	Do you provide tenants with infrastructure service failover capability to other providers?	
Business Continuity Management & Operational Resilience *Business Continuity Testing*	BCR-02.1	Are business continuity plans subject to test at planned intervals or upon significant organizational or environmental changes to ensure continuing effectiveness?	AWS Business Continuity Policies and Plans have been developed and tested in alignment with ISO 27001 standards. Refer to ISO 27001 standard, annex A domain 17 for further details on AWS and business continuity.
Business Continuity Management & Operational Resilience *Power / Telecommunications*	BCR-03.1	Do you provide tenants with documentation showing the transport route of their data between your systems?	AWS Customers designate in which physical region their data and servers will be located. AWS will not move customers' content from the selected regions without notifying the customer, unless required to comply with the law or requests of governmental entities. AWS SOC reports provides additional details. Customers can also choose their network path to AWS facilities, including over dedicated, private networks where the customer controls the traffic routing.
	BCR-03.2	Can tenants define how their data is transported and through which legal jurisdictions?	
Business Continuity Management & Operational Resilience Documentation	BCR-04.1	Are information system documents (e.g., administrator and user guides, architecture diagrams, etc.) made available to authorized personnel to ensure configuration, installation and operation of the information system?	Information System Documentation is made available internally to AWS personnel through the use of Amazon's Intranet site. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security/. Refer to ISO 27001 Appendix A Domain 12.
Business Continuity Management & Operational Resilience *Environmental Risks*	BCR-05.1	Is physical protection against damage (e.g., natural causes, natural disasters, deliberate attacks) anticipated and designed with countermeasures applied?	AWS data centers incorporate physical protection against environmental risks. AWS' physical protection against environmental risks has been validated by an independent auditor and has been certified as being in alignment with ISO 27002 best practices. Refer to ISO 27001 standard, Annex A domain 11.

Control Group	CID	Consensus Assessment Questions	AWS Response
Business Continuity Management & Operational Resilience *Equipment Location*	BCR -06.1	Are any of your data centers located in places that have a high probability/occurrence of high-impact environmental risks (floods, tornadoes, earthquakes, hurricanes, etc.)?	AWS data centers incorporate physical protection against environmental risks. AWS' physical protection against environmental risks has been validated by an independent auditor and has been certified as being in alignment with ISO 27002 best practices. Refer to ISO 27001 standard, Annex A domain 11.
Business Continuity Management & Operational Resilience *Equipment Maintenance*	BCR -07.1	If using virtual infrastructure, does your cloud solution include independent hardware restore and recovery capabilities?	EBS Snapshot functionality allows customers to capture and restore virtual machine images at any time. Customers can export their AMIs and use them on premise or at another provider (subject to software licensing restrictions). Refer to the AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
	BCR - 07.2	If using virtual infrastructure, do you provide tenants with a capability to restore a Virtual Machine to a previous state in time?	
	BCR - 07.3	If using virtual infrastructure, do you allow virtual machine images to be downloaded and ported to a new cloud provider?	
	BCR - 07.4	If using virtual infrastructure, are machine images made available to the customer in a way that would allow the customer to replicate those images in their own off-site storage location?	
	BCR -07.5	Does your cloud solution include software/provider independent restore and recovery capabilities?	
Business Continuity Management & Operational Resilience *Equipment Power Failures*	BCR -08.1	Are security mechanisms and redundancies implemented to protect equipment from utility service outages (e.g., power failures, network disruptions, etc.)?	AWS equipment is protected from utility service outages in alignment with ISO 27001 standard. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. AWS SOC reports provides additional details on controls in place to minimize the effect of a malfunction or physical disaster to the computer and data center facilities. In addition, refer to the AWS Cloud Security Whitepaper - available at http://aws.amazon.com/security.

Control Group	CID	Consensus Assessment Questions	AWS Response
Business Continuity Management & Operational Resilience *Impact Analysis*	BCR -09.1	Do you provide tenants with ongoing visibility and reporting of your operational Service Level Agreement (SLA) performance?	AWS CloudWatch provides monitoring for AWS cloud resources and the applications customers run on AWS. Refer to aws.amazon.com/cloudwatch for additional details. AWS also publishes our most up-to-the-minute information on service availability on the Service Health Dashboard. Refer to status.aws.amazon.com.
	BCR - 09.2	Do you make standards-based information security metrics (CSA, CAMM, etc.) available to your tenants?	
	BCR - 09.3	Do you provide customers with ongoing visibility and reporting of your SLA performance?	
Business Continuity Management & Operational Resilience *Policy*	BCR -10.1	Are policies and procedures established and made available for all personnel to adequately support services operations' roles?	Policies and Procedures have been established through AWS Security framework based upon NIST 800-53, ISO 27001, ISO 27017, ISO 27018, ISO 9001 standard and the PCI DSS requirements. Refer to AWS Risk and Compliance Whitepaper for additional details - available at http://aws.amazon.com/compliance.
Business Continuity Management & Operational Resilience *Retention Policy*	BCR -11.1	Do you have technical control capabilities to enforce tenant data retention policies?	AWS provide customers with the ability to delete their data. However, AWS Customers retain control and ownership of their data so it is the customer's responsibility to manage data retention to their own requirements. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security. AWS errs on the side of protecting customer privacy and is vigilant in determining which law enforcement requests we must comply with. AWS does not hesitate to challenge orders from law enforcement if we think the orders lack a solid basis. For additional information refer to https://aws.amazon.com/compliance/data-privacy-faq/.
	BCR -11.2	Do you have a documented procedure for responding to requests for tenant data from governments or third parties?	
	BCR -11.4	Have you implemented backup or redundancy mechanisms to ensure compliance with regulatory, statutory, contractual or business requirements?	AWS backup and redundancy mechanisms have been developed and tested in alignment with ISO 27001 standards. Refer to ISO 27001 standard, annex A domain 12 and the AWS SOC 2 report for additional information on AWS backup and redundancy mechanisms.
	BCR -11.5	Do you test your backup or redundancy mechanisms at least annually?	
Change Control & Configuration Management *New Development / Acquisition*	CCC-01.1	Are policies and procedures established for management authorization for development or acquisition of new applications, systems, databases, infrastructure, services, operations and facilities?	Policies and Procedures have been established through AWS Security framework based upon NIST 800-53, ISO 27001, ISO 27017, ISO 27018, ISO 9001 standard and the PCI DSS requirements. Whether a customer is new to AWS or an advanced user, useful information about the services, ranging from introductions to advanced features, can be found on the AWS Documentation section of our website at https://aws.amazon.com/documentation/.
	CCC-01.2	Is documentation available that describes the installation, configuration and use of products/services/features?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Change Control & Configuration Management *Outsourced Development*	CCC-02.1	Do you have controls in place to ensure that standards of quality are being met for all software development?	AWS does not generally outsource development of software. AWS incorporates standards of quality as part of the system development lifecycle (SDLC) processes. Refer to ISO 27001 standard, Annex A, domain 14 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	CCC-02.2	Do you have controls in place to detect source code security defects for any outsourced software development activities?	
Change Control & Configuration *Management Quality Testing*	CCC-03.1	Do you provide your tenants with documentation that describes your quality assurance process?	AWS maintains an ISO 9001 certification. This is an independent validation of AWS quality system and determined that AWS activities comply with ISO 9001 requirements. AWS Security Bulletins notify customers of security and privacy events. Customers can subscribe to the AWS Security Bulletin RSS feed on our website. Refer to aws.amazon.com/security/security-bulletins/. AWS also publishes our most up-to-the-minute information on service availability on the Service Health Dashboard. Refer to status.aws.amazon.com. The AWS system development lifecycle (SDLC) incorporates industry best practices which include formal design reviews by the AWS Security Team, threat modeling and completion of a risk assessment. Refer to the AWS Overview of Security Processes for further details. In addition, refer to ISO 27001 standard, Annex A, domain 14 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	CCC-03.2	Is documentation describing known issues with certain products/services available?	
	CCC-03.3	Are there policies and procedures in place to triage and remedy reported bugs and security vulnerabilities for product and service offerings?	
	CCC-03.4	Are mechanisms in place to ensure that all debugging and test code elements are removed from released software versions?	
Change Control & Configuration Management *Unauthorized Software Installations*	CCC-04.1	Do you have controls in place to restrict and monitor the installation of unauthorized software onto your systems?	AWS' program, processes and procedures for managing malicious software is in alignment with ISO 27001 standards. Refer to ISO 27001 standard, Annex A, domain 12 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Change Control & Configuration Management *Production Changes*	CCC-05.1	Do you provide tenants with documentation that describes your production change management procedures and their roles / rights / responsibilities within it?	AWS SOC reports provides an overview of the controls in place to manage change management in the AWS environment. In addition, refer to ISO 27001 standard, Annex A, domain 12 for further details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.

Control Group	CID	Consensus Assessment Questions	AWS Response
Data Security & Information Lifecycle Management *Classification*	DSI-01.1	Do you provide a capability to identify virtual machines via policy tags/metadata (e.g., tags can be used to limit guest operating systems from booting/instantiating/transporting data in the wrong country)?	Virtual Machines are assigned to customers as a part of the EC2 service. Customers retain control over what resources are being used and where resources reside. Refer to the AWS website for additional details - http://aws.amazon.com.
	DSI-01.2	Do you provide a capability to identify hardware via policy tags/metadata/hardware tags (e.g., TXT/TPM, VN-Tag, etc.)?	AWS provides the ability to tag EC2 resources. A form of metadata, EC2 tags can be used to create user-friendly names, enhance searchability, and improve coordination between multiple users. The AWS Management Console has also supports tagging.
	DSI-01.3	Do you have a capability to use system geographic location as an authentication factor?	AWS provides the capability of conditional user access based on IP address. Customers can add conditions to control how users can use AWS, such as time of day, their originating IP address, or whether they are using SSL.
	DSI-01.4	Can you provide the physical location/geography of storage of a tenant's data upon request?	AWS provides customers the flexibility to place instances and store data within multiple geographic Regions. AWS Customers designate in which physical region their data and their servers will be located. AWS will not move customers' content from the selected Regions without notifying the customer, unless required to comply with the law or requests of governmental entities. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US) (Oregon), EU (Ireland), EU (Frankfurt), Asia Pacific (Seoul), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing) Region and South America (Sao Paulo).
	DSI-01.5	Can you provide the physical location/geography of storage of a tenant's data in advance?	
	DSI-01.6	Do you follow a structured data-labeling standard (e.g., ISO 15489, Oasis XML Catalog Specification, CSA data type guidance)?	AWS Customers retain control and ownership of their data and may implement a structured data-labeling standard to meet their requirements.
	DSI-01.7	Do you allow tenants to define acceptable geographical locations for data routing or resource instantiation?	AWS provides customers the flexibility to place instances and store data within multiple geographic regions. AWS Customers designate in which physical region their data and their servers will be located. AWS will not move customers' content from the selected Regions without notifying the customer, unless required to comply with the law or requests of governmental entities. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US) (Oregon), EU (Ireland), EU (Frankfurt), Asia Pacific (Seoul), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing) Region and South America (Sao Paulo).
Data Security & Information Lifecycle Management *Data Inventory / Flows*	DSI-02.1	Do you inventory, document, and maintain data flows for data that is resident (permanent or temporary) within the services' applications and infrastructure network and systems?	AWS Customers designate in which physical region their content will be located. AWS will not move customers' content from the selected regions without notifying the customer, unless required to comply with the law or requests of governmental entities. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US)(Oregon), EU (Ireland), EU (Frankfurt), Asia Pacific (Seoul), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing) Region, and South America (Sao Paulo).

Control Group	CID	Consensus Assessment Questions	AWS Response
	DSI-02.2	Can you ensure that data does not migrate beyond a defined geographical residency?	
Data Security & Information Lifecycle Management *eCommerce Transactions*	DSI-03.1	Do you provide open encryption methodologies (3.4ES, AES, etc.) to tenants in order for them to protect their data if it is required to move through public networks (e.g., the Internet)?	All of the AWS APIs are available via SSH-protected endpoints which provide server authentication. AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS, SimpleDB and EC2. IPSec tunnels to VPC are also encrypted. In addition, customers can leverage AWS Key Management Systems (KMS) to create and control encryption keys (refer to https://aws.amazon.com/kms/). Customers may also use third-party encryption technologies. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
	DSI-03.2	Do you utilize open encryption methodologies any time your infrastructure components need to communicate with each other via public networks (e.g., Internet-based replication of data from one environment to another)?	
Data Security & Information Lifecycle Management *Handling / Labeling / Security Policy*	DSI-04.1	Are policies and procedures established for labeling, handling and the security of data and objects that contain data?	AWS Customers retain control and ownership of their data and may implement a labeling and handling policy and procedures to meet their requirements.
	DSI-04.2	Are mechanisms for label inheritance implemented for objects that act as aggregate containers for data?	
Data Security & Information Lifecycle Management *Nonproduction Data*	DSI-05.1	Do you have procedures in place to ensure production data shall not be replicated or used in non-production environments?	AWS Customers retain control and ownership of their own data. AWS provides customers the ability to maintain and develop production and non-production environments. It is the responsibility of the customer to ensure that their production data is not replicated to non-production environments.
Data Security & Information Lifecycle Management *Ownership / Stewardship*	DSI-06.1	Are the responsibilities regarding data stewardship defined, assigned, documented and communicated?	AWS Customers retain control and ownership of their own data. Refer to the AWS Customer Agreement for additional information.
Data Security & Information Lifecycle Management *Secure Disposal*	DSI-07.1	Do you support secure deletion (e.g., degaussing/cryptographic wiping) of archived and backed-up data as determined by the tenant?	When a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals. AWS uses the techniques detailed in DoD 5220.22-M ("National Industrial Security Program Operating Manual ") or NIST 800-88 ("Guidelines for Media Sanitization") to destroy data as part of the decommissioning process. If a hardware device is unable to be

Control Group	CID	Consensus Assessment Questions	AWS Response
	DSI-07.2	Can you provide a published procedure for exiting the service arrangement, including assurance to sanitize all computing resources of tenant data once a customer has exited your environment or has vacated a resource?	decommissioned using these procedures, the device will be degaussed or physically destroyed in accordance with industry-standard practices. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security. Amazon EBS volumes are presented to you as raw unformatted block devices that have been wiped prior to being made available for use. Wiping occurs immediately before reuse so that you can be assured that the wipe process completed. If you have procedures requiring that all data be wiped via a specific method, such as those detailed in DoD 5220.22-M ("National Industrial Security Program Operating Manual ") or NIST 800-88 ("Guidelines for Media Sanitization"), you have the ability to do so on Amazon EBS. You should conduct a specialized wipe procedure prior to deleting the volume for compliance with your established requirements. Encryption of sensitive data is generally a good security practice, and AWS provides the ability to encrypt EBS volumes and their snapshots with AES-256. The encryption occurs on the servers that host the EC2 instances, providing encryption of data as it moves between EC2 instances and EBS storage. In order to be able to do this efficiently and with low latency, the EBS encryption feature is only available on EC2's more powerful instance types (e.g., M3, C3, R3, G2).
Datacenter Security *Asset Management*	DCS-01.1	Do you maintain a complete inventory of all of your critical assets that includes ownership of the asset?	In alignment with ISO 27001 standards, AWS Hardware assets are assigned an owner, tracked and monitored by the AWS personnel with AWS proprietary inventory management tools. AWS procurement and supply chain team maintain relationships with all AWS suppliers. Refer to ISO 27001 standards; Annex A, domain 8 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	DCS-01.2	Do you maintain a complete inventory of all of your critical supplier relationships?	
Datacenter Security *Controlled Access Points*	DCS-02.1	Are physical security perimeters (e.g., fences, walls, barriers, guards, gates, electronic surveillance, physical authentication mechanisms, reception desks and security patrols) implemented?	Physical security controls include but are not limited to perimeter controls such as fencing, walls, security staff, video surveillance, intrusion detection systems and other electronic means. The AWS SOC reports provides additional details on the specific control activities executed by AWS. Refer to ISO 27001 standards; Annex A, domain 11 for further information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Datacenter Security *Equipment Identification*	DCS-03.1	Is automated equipment identification used as a method to validate connection authentication integrity based on known equipment location?	AWS manages equipment identification in alignment with ISO 27001 standard. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.

Control Group	CID	Consensus Assessment Questions	AWS Response
Datacenter Security *Offsite Authorization*	DCS -04.1	Do you provide tenants with documentation that describes scenarios in which data may be moved from one physical location to another? (e.g., offsite backups, business continuity failovers, replication)	AWS Customers can designate which physical region their data will be located. AWS will not move customers' content from the selected Regions without notifying the customer unless required to comply with the law or requests of governmental entities. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
Datacenter Security *Offsite equipment*	DCS -05.1	Can you provide tenants with evidence documenting your policies and procedures governing asset management and repurposing of equipment?	In alignment with ISO 27001 standards, when a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals. AWS uses the techniques detailed in DoD 5220.22-M ("National Industrial Security Program Operating Manual ") or NIST 800-88 ("Guidelines for Media Sanitization") to destroy data as part of the decommissioning process. If a hardware device is unable to be decommissioned using these procedures, the device will be degaussed or physically destroyed in accordance with industry-standard practices. Refer to ISO 27001 standards; Annex A, domain 8 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Datacenter Security *Policy*	DCS -06.1	Can you provide evidence that policies, standards and procedures have been established for maintaining a safe and secure working environment in offices, rooms, facilities and secure areas?	AWS engages with external certifying bodies and independent auditors to review and validate our compliance with compliance frameworks. AWS SOC reports provides additional details on the specific physical security control activities executed by AWS. Refer to ISO 27001 standards; Annex A, domain 11 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	DCS - 06.2	Can you provide evidence that your personnel and involved third parties have been trained regarding your documented policies, standards and procedures?	In alignment with ISO 27001 standard, all AWS employees complete periodic Information Security training which requires an acknowledgement to complete. Compliance audits are periodically performed to validate that employees understand and follow the established policies. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification. In addition AWS SOC 1 and SOC 2 reports provides further information.
Datacenter Security *Secure Area Authorization*	DCS -07.1	Do you allow tenants to specify which of your geographic locations their data is allowed to move into/out of (to address legal jurisdictional considerations based on where data is stored vs. accessed)?	AWS Customers designate which physical region their data will be located. AWS will not move customers' content from the selected Regions without notifying the customer unless required to comply with the law or requests of governmental entities. As of this writing, there are twelve regions: US East (Northern Virginia), US West (Oregon), US West (Northern California), AWS GovCloud (US)(Oregon), EU (Ireland), EU (Frankfurt), Asia Pacific (Seoul), Asia Pacific (Singapore), Asia Pacific (Tokyo), Asia Pacific (Sydney), China (Beijing) Region, and South America (Sao Paulo).

Control Group	CID	Consensus Assessment Questions	AWS Response
Datacenter Security *Unauthorized Persons Entry*	DCS -08.1	Are ingress and egress points, such as service areas and other points where unauthorized personnel may enter the premises, monitored, controlled and isolated from data storage and process?	Physical access is strictly controlled both at the perimeter and at building ingress points and includes, but is not limited to, professional security staff utilizing video surveillance, intrusion detection systems, and other electronic means. Authorized staff must pass two-factor authentication a minimum of two times to access data center floors. Physical access points to server locations are recorded by closed circuit television camera (CCTV) as defined in the AWS Data Center Physical Security Policy. AWS Physical Security Mechanisms are reviewed by independent external auditors during audits for our SOC, PCI DSS, ISO 27001 and FedRAMP compliance.
Datacenter Security *User Access*	DCS -09.1	Do you restrict physical access to information assets and functions by users and support personnel?	
Encryption & Key Management *Entitlement*	EKM -01.1	Do you have key management policies binding keys to identifiable owners?	AWS provides customers the ability to use their own encryption mechanism for nearly all services including S3, EBS and EC2. VPC sessions are also encrypted. In addition, customers can leverage AWS Key Management Systems (KMS) to create and control encryption keys (refer to https://aws.amazon.com/kms/). Internally, AWS establishes and manages cryptographic keys for required cryptography employed within the AWS infrastructure. An AWS developed secure key and credential manager is used to create, protect and distribute symmetric keys and is used to secure and distribute: AWS credentials needed on hosts, RSA public/private keys and X.509 Certifications. AWS cryptographic processes are reviewed by independent third party auditors for our continued compliance with SOC, PCI DSS, ISO 27001 and FedRAMP.
Encryption & Key Management *Key Generation*	EKM -02.1	Do you have a capability to allow creation of unique encryption keys per tenant?	AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS and EC2. IPSec tunnels to VPC are also encrypted. In addition, customers can leverage AWS Key Management Systems (KMS) to create and control encryption keys (refer to https://aws.amazon.com/kms/). Refer to AWS SOC reports for more details on KMS. In addition, refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security. Internally, AWS establishes and manages cryptographic keys for required cryptography employed within the AWS infrastructure. AWS produces, controls and distributes symmetric cryptographic keys using NIST approved key management technology and processes in the AWS information system. An AWS developed secure key and credential manager is used to create, protect and distribute symmetric keys and is used to secure and distribute: AWS credentials needed on hosts, RSA public/private keys and X.509 Certifications. AWS cryptographic processes are reviewed by independent third party auditors for our continued compliance with SOC, PCI DSS, ISO 27001 and FedRAMP.
	EKM - 02.2	Do you have a capability to manage encryption keys on behalf of tenants?	
	EKM - 02.3	Do you maintain key management procedures?	
	EKM - 02.4	Do you have documented ownership for each stage of the lifecycle of encryption keys?	
	EKM - 02.5	Do you utilize any third party/open source/proprietary frameworks to manage encryption keys?	
Encryption & Key	EKM -03.1	Do you encrypt tenant data at rest (on disk/storage) within your environment?	AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS and EC2. IPSec tunnels to VPC are also encrypted. In addition, customers can leverage AWS Key

Control Group	CID	Consensus Assessment Questions	AWS Response
Management *Encryption*	EKM-03.2	Do you leverage encryption to protect data and virtual machine images during transport across and between networks and hypervisor instances?	Management Systems (KMS) to create and control encryption keys (refer to https://aws.amazon.com/kms/). Refer to AWS SOC reports for more details on KMS. In addition, refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
	EKM-03.3	Do you support tenant-generated encryption keys or permit tenants to encrypt data to an identity without access to a public key certificate (e.g. identity-based encryption)?	
	EKM-03.4	Do you have documentation establishing and defining your encryption management policies, procedures and guidelines?	
Encryption & Key Management *Storage and Access*	EKM-04.1	Do you have platform and data appropriate encryption that uses open/validated formats and standard algorithms?	AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS and EC2. In addition, customers can leverage AWS Key Management Systems (KMS) to create and control encryption keys (refer to https://aws.amazon.com/kms/). Refer to AWS SOC reports for more details on KMS. AWS establishes and manages cryptographic keys for required cryptography employed within the AWS infrastructure. AWS produces, controls and distributes symmetric cryptographic keys using NIST approved key management technology and processes in the AWS information system. An AWS developed secure key and credential manager is used to create, protect and distribute symmetric keys and is used to secure and distribute: AWS credentials needed on hosts, RSA public/private keys and X.509 Certifications. AWS cryptographic processes are reviewed by independent third party auditors for our continued compliance with SOC, PCI DSS, ISO 27001 and FedRAMP.
	EKM-04.2	Are your encryption keys maintained by the cloud consumer or a trusted key management provider?	
	EKM-04.3	Do you store encryption keys in the cloud?	
	EKM-04.4	Do you have separate key management and key usage duties?	
Governance and Risk Management *Baseline Requirements*	GRM-01.1	Do you have documented information security baselines for every component of your infrastructure (e.g., hypervisors, operating systems, routers, DNS servers, etc.)?	In alignment with ISO 27001 standards, AWS maintains system baselines for critical components. Refer to ISO 27001 standards, Annex A, domain 14 and 18 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. Customers can provide their own virtual machine image. VM Import enables customers to easily import virtual machine images from your existing environment to Amazon EC2 instances.
	GRM-01.2	Do you have a capability to continuously monitor and report the compliance of your infrastructure against your information security baselines?	
	GRM-01.3	Do you allow your clients to provide their own trusted virtual machine image to ensure conformance to their own internal standards?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Governance and Risk Management *Risk Assessments*	GRM-02.1	Do you provide security control health data in order to allow tenants to implement industry standard Continuous Monitoring (which allows continual tenant validation of your physical and logical control status)?	AWS does publish independent auditor reports and certifications to provide customers with considerable information regarding the policies, processes, and controls established and operated by AWS. The relevant certifications and reports can be provided to AWS Customers. Continuous Monitoring of logical controls can be executed by customers on their own systems.
	GRM-02.2	Do you conduct risk assessments associated with data governance requirements at least once a year?	In alignment with ISO 27001 standard, AWS maintains a Risk Management program to mitigate and manage risk. In addition AWS maintains an AWS ISO 27018 certification. Alignment with ISO 27018 demonstrates to customers that AWS has a system of controls in place that specifically address the privacy protection of their content. For more information refer to the AWS Compliance ISO 27018 FAQ http://aws.amazon.com/compliance/iso-27018-faqs/.
Governance and Risk Management *Management Oversight*	GRM-03.1	Are your technical, business, and executive managers responsible for maintaining awareness of and compliance with security policies, procedures, and standards for both themselves and their employees as they pertain to the manager and employees' area of responsibility?	The Control environment at Amazon begins at the highest level of the Company. Executive and senior leadership play important roles in establishing the Company's tone and core values. Every employee is provided with the Company's Code of Business Conduct and Ethics and completes periodic training. Compliance audits are performed so that employees understand and follow the established policies. Refer to AWS Risk & Compliance whitepaper for additional details - available at http://aws.amazon.com/compliance.
Governance and Risk Management *Management Program*	GRM-04.1	Do you provide tenants with documentation describing your Information Security Management Program (ISMP)?	AWS provides our customers with our ISO 27001 certification. The ISO 27001 certification is specifically focused on the AWS ISMS and measures how AWS internal processes follow the ISO standard. Certification means a third party accredited independent auditor has performed an assessment of our processes and controls and confirms they are operating in alignment with the ISO 27001 certification standard. For additional information refer to the AWS Compliance ISO 27001 FAQ website: http://aws.amazon.com/compliance/iso-27001-faqs/.
	GRM-04.2	Do you review your Information Security Management Program (ISMP) least once a year?	
Governance and Risk Management *Management Support / Involvement*	GRM-05.1	Do you ensure your providers adhere to your information security and privacy policies?	AWS has established information security framework and policies which have integrated the ISO 27001 certifiable framework based on ISO 27002 controls, American Institute of Certified Public Accountants (AICPA) Trust Services Principles, PCI DSS v3.1 and National Institute of Standards and Technology (NIST) Publication 800-53 (Recommended Security Controls for Federal Information Systems). AWS manages third-party relationships in alignment with ISO 27001 standards. AWS Third Party requirements are reviewed by independent external
Governance and Risk Management *Policy*	GRM-06.1	Do your information security and privacy policies align with industry standards (ISO-27001, ISO-22307, CoBIT, etc.)?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	GRM-06.2	Do you have agreements to ensure your providers adhere to your information security and privacy policies?	auditors during audits for our PCI DSS, ISO 27001 and FedRAMP compliance. Information about the AWS Compliance programs is published publicly on our website at http://aws.amazon.com/compliance/.
	GRM-06.3	Can you provide evidence of due diligence mapping of your controls, architecture and processes to regulations and/or standards?	
	GRM-06.4	Do you disclose which controls, standards, certifications and/or regulations you comply with?	
Governance and Risk Management *Policy Enforcement*	GRM-07.1	Is a formal disciplinary or sanction policy established for employees who have violated security policies and procedures?	AWS provides security policies and security training to employees to educate them as to their role and responsibilities concerning information security. Employees who violate Amazon standards or protocols are investigated and appropriate disciplinary action (e.g. warning, performance plan, suspension, and/or termination) is followed. Refer to the AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security. Refer to ISO 27001 Annex A, domain 7 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	GRM-07.2	Are employees made aware of what actions could be taken in the event of a violation via their policies and procedures?	
Governance and Risk Management *Business / Policy Change Impacts*	GRM-08.1	Do risk assessment results include updates to security policies, procedures, standards and controls to ensure they remain relevant and effective?	Updates to AWS security policies, procedures, standards and controls occur on an annual basis in alignment with the ISO 27001 standard. Refer to ISO 27001 for additional information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification.
Governance and Risk Management *Policy Reviews*	GRM-09.1	Do you notify your tenants when you make material changes to your information security and/or privacy policies?	Our AWS Cloud Security Whitepaper and Risk and Compliance whitepapers, available at http://aws.amazon.com/security and http://aws.amazon.com/compliance, are updated on a regular basis to reflect updates to the AWS policies.
	GRM-09.2	Do you perform, at minimum, annual reviews to your privacy and security policies?	The AWS SOC reports provide details related to privacy and security policy review.
Governance and Risk Management *Assessments*	GRM-10.1	Are formal risk assessments aligned with the enterprise-wide framework and performed at least annually, or at planned intervals, determining the likelihood and impact of all identified risks, using qualitative and quantitative methods?	In alignment with ISO 27001 AWS has developed a Risk Management program to mitigate and manage risk. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification. Refer to AWS Risk and Compliance Whitepaper (available at aws.amazon.com/security) for additional details on AWS Risk Management Framework.

Control Group	CID	Consensus Assessment Questions	AWS Response
	GRM-10.2	Is the likelihood and impact associated with inherent and residual risk determined independently, considering all risk categories (e.g., audit results, threat and vulnerability analysis, and regulatory compliance)?	
Governance and Risk Management *Program*	GRM-11.1	Do you have a documented, organization-wide program in place to manage risk?	In alignment with ISO 27001, AWS maintains a Risk Management program to mitigate and manage risk. AWS management has a strategic business plan which includes risk identification and the implementation of controls to mitigate or manage risks. AWS management re-evaluates the strategic business plan at least biannually. This process requires management to identify risks within its areas of responsibility and to implement appropriate measures designed to address those risks. AWS Risk Management program is reviewed by independent external auditors during audits for our PCI DSS, ISO 27001 and FedRAMP compliance.
	GRM-11.2	Do you make available documentation of your organization-wide risk management program?	
Human Resources *Asset Returns*	HRS-01.1	Are systems in place to monitor for privacy breaches and notify tenants expeditiously if a privacy event may have impacted their data?	AWS Customers retain the responsibility to monitor their own environment for privacy breaches. The AWS SOC reports provides an overview of the controls in place to monitor AWS managed environment.
	HRS-01.2	Is your Privacy Policy aligned with industry standards?	
Human Resources *Background Screening*	HRS-02.1	Pursuant to local laws, regulations, ethics and contractual constraints, are all employment candidates, contractors and involved third parties subject to background verification?	AWS conducts criminal background checks, as permitted by applicable law, as part of pre-employment screening practices for employees commensurate with the employee's position and level of access to AWS facilities. The AWS SOC reports provides additional details regarding the controls in place for background verification.
Human Resources *Employment Agreements*	HRS-03.1	Do you specifically train your employees regarding their specific role and the information security controls they must fulfill?	In alignment with ISO 27001 standard, all AWS employees complete periodic role based training that includes AWS Security training and requires an acknowledgement to complete. Compliance audits are periodically performed to validate that employees understand and follow the established policies. Refer to SOC reports for additional details. All personnel supporting AWS systems and devices must sign a non-disclosure agreement prior to being granted access. Additionally, upon hire, personnel are required to read and accept the Acceptable Use Policy and the Amazon Code of Business Conduct and Ethics (Code of Conduct) Policy.
	HRS-03.2	Do you document employee acknowledgment of training they have completed?	
	HRS-03.3	Are all personnel required to sign NDA or Confidentiality Agreements as a condition of employment to protect customer/tenant information?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	HRS-03.4	Is successful and timed completion of the training program considered a prerequisite for acquiring and maintaining access to sensitive systems?	
	HRS-03.5	Are personnel trained and provided with awareness programs at least once a year?	
Human Resources *Employment Termination*	HRS-04.1	Are documented policies, procedures and guidelines in place to govern change in employment and/or termination?	AWS Human Resources team defines internal management responsibilities to be followed for termination and role change of employees and vendors. AWS SOC reports provide additional details.
	HRS-04.2	Do the above procedures and guidelines account for timely revocation of access and return of assets?	Access is automatically revoked when an employee's record is terminated in Amazon's Human Resources system. When changes in an employee's job function occur, continued access must be explicitly approved to the resource or it will be automatically revoked. AWS SOC reports provide further details on User access revocation. In addition the AWS Security White paper, section "Employee Lifecycle" provides additional information. Refer to ISO 27001 Annex A, domain 7 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Human Resources *Portable / Mobile Devices*	HRS-05.1	Are policies and procedures established and measures implemented to strictly limit access to your sensitive data and tenant data from portable and mobile devices (e.g. laptops, cell phones and personal digital assistants (PDAs)), which are generally higher-risk than non-portable devices (e.g., desktop computers at the provider organization's facilities)?	Customers retain the control and responsibility of their data and associated media assets. It is the responsibility of the customer to manage mobile security devices and the access to the customer's content.
Human Resources *Nondisclosure Agreements*	HRS-06.1	Are requirements for non-disclosure or confidentiality agreements reflecting the organization's needs for the protection of data and operational details identified, documented and reviewed at planned intervals?	Amazon Legal Counsel manages and periodically revises the Amazon NDA to reflect AWS business needs.
Human Resources *Roles / Responsibilities*	HRS-07.1	Do you provide tenants with a role definition document clarifying your administrative responsibilities versus those of the tenant?	The AWS Cloud Security Whitepaper and the AWS Risk and Compliance Whitepaper provide details on the roles and responsibilities of AWS and those of our Customers. The whitepapers area available at: http://aws.amazon.com/security and http://aws.amazon.com/compliance.

Control Group	CID	Consensus Assessment Questions	AWS Response
Human Resources *Acceptable Use*	HRS -08.1	Do you provide documentation regarding how you may or access tenant data and metadata?	AWS has a formal access control policy that is reviewed and updated on an annual basis (or when any major change to the system occurs that impacts the policy). The policy addresses purpose, scope, roles, responsibilities and management commitment. AWS employs the concept of least privilege, allowing only the necessary access for users to accomplish their job function. Customers retain the control and responsibility of their data and associated media assets. It is the responsibility of the customer to manage mobile security devices and the access to the customer's content. Refer to the ISO 27001 standard and 27018 code of practice for additional information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 and ISO 27018.
	HRS - 08.2	Do you collect or create metadata about tenant data usage through inspection technologies (search engines, etc.)?	
	HRS - 08.3	Do you allow tenants to opt out of having their data/metadata accessed via inspection technologies?	
Human Resources *Training / Awareness*	HRS -09.1	Do you provide a formal, role-based, security awareness training program for cloud-related access and data management issues (e.g., multi-tenancy, nationality, cloud delivery model segregation of duties implications and conflicts of interest) for all persons with access to tenant data?	In alignment with ISO 27001 standard, all AWS employees complete periodic Information Security training which requires an acknowledgement to complete. Compliance audits are periodically performed to validate that employees understand and follow the established policies. AWS roles and responsibilities are reviewed by independent external auditors during audits for our SOC, PCI DSS, ISO 27001 and FedRAMP compliance.
	HRS - 09.2	Are administrators and data stewards properly educated on their legal responsibilities with regard to security and data integrity?	
Human Resources *User Responsibility*	HRS -10.1	Are users made aware of their responsibilities for maintaining awareness and compliance with published security policies, procedures, standards and applicable regulatory requirements?	AWS has implemented various methods of internal communication at a global level to help employees understand their individual roles and responsibilities and to communicate significant events in a timely manner. These methods include orientation and training programs for newly hired employee as well as electronic mail messages and the posting of information via the Amazon intranet. Refer to ISO 27001 standard, Annex A, domain 7 and 8. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. In addition the AWS Cloud Security Whitepaper provides further details - available at http://aws.amazon.com/security.
	HRS -10.2	Are users made aware of their responsibilities for maintaining a safe and secure working environment?	
	HRS -10.3	Are users made aware of their responsibilities for leaving unattended equipment in a secure manner?	
Human Resources *Workspace*	HRS -11.1	Do your data management policies and procedures address tenant and service level conflicts of interests?	AWS data management policies are in alignment with ISO 27001 standard. Refer to ISO 27001 standard, Annex A, domain 8 and 9. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. AWS SOC reports

Control Group	CID	Consensus Assessment Questions	AWS Response
	HRS -11.2	Do your data management policies and procedures include a tamper audit or software integrity function for unauthorized access to tenant data?	provides additional details on the specific control activities executed by AWS to prevent unauthorized access to AWS resources. AWS has identified auditable event categories across systems and devices within the AWS system. Service teams configure the auditing features to record continuously the security-related events in accordance with requirements. Audit records contain a set of data elements in order to support necessary analysis requirements. In addition, audit records are available for AWS Security team or other appropriate teams to perform inspection or analysis on demand, and in response to security-related or business-impacting events.
	HRS -11.3	Does the virtual machine management infrastructure include a tamper audit or software integrity function to detect changes to the build/configuration of the virtual machine?	
Identity & Access Management *Audit Tools Access*	IAM -01.1	Do you restrict, log and monitor access to your information security management systems? (E.g., hypervisors, firewalls, vulnerability scanners, network sniffers, APIs, etc.)	In alignment with ISO 27001 standards, AWS has established formal policies, procedures to delineate the minimum standards for logical access to AWS resources. AWS SOC reports outlines the controls in place to manage access provisioning to AWS resources. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
	IAM -01.2	Do you monitor and log privileged access (administrator level) to information security management systems?	AWS has identified auditable event categories across systems and devices within the AWS system. Service teams configure the auditing features to record continuously the security-related events in accordance with requirements. The log storage system is designed to provide a highly scalable, highly available service that automatically increases capacity as the ensuing need for log storage grows. Audit records contain a set of data elements in order to support necessary analysis requirements. In addition, audit records are available for AWS Security team or other appropriate teams to perform inspection or analysis on demand, and in response to security-related or business-impacting events. Designated personnel on AWS teams receive automated alerts in the event of an audit processing failure. Audit processing failures include, for example, software/hardware errors. When alerted, on-call personnel issue a trouble ticket and track the event until it is resolved. AWS logging and monitoring processes are reviewed by independent third party auditors for our continued compliance with SOC, PCI DSS, ISO 27001 and FedRAMP compliance.
Identity & Access Management *User Access Policy*	IAM -02.1	Do you have controls in place ensuring timely removal of systems access that is no longer required for business purposes?	AWS SOC reports provides further details on User access revocation. In addition the AWS Security White paper, section "Employee Lifecycle" provides additional information. Refer to ISO 27001 Annex A, domain 9 for additional details. AWS has

Control Group	CID	Consensus Assessment Questions	AWS Response
	IAM-02.2	Do you provide metrics to track the speed with which you are able to remove systems access that is no longer required for business purposes?	been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Identity & Access Management *Diagnostic / Configuration Ports Access*	IAM-03.1	Do you use dedicated secure networks to provide management access to your cloud service infrastructure?	Controls in place limit access to systems and data and provide that access to systems or data is restricted and monitored per the AWS access policy. In addition, customer data is and server instances are logically isolated from other customers by default. Privileged user access controls are reviewed by an independent auditor during the AWS SOC, ISO 27001, PCI, ITAR, and FedRAMP audits.
Identity & Access Management *Policies and Procedures*	IAM-04.1	Do you manage and store the identity of all personnel who have access to the IT infrastructure, including their level of access?	
	IAM-04.2	Do you manage and store the user identity of all personnel who have network access, including their level of access?	
Identity & Access Management *Segregation of Duties*	IAM-05.1	Do you provide tenants with documentation on how you maintain segregation of duties within your cloud service offering?	Customers retain the ability to manage segregations of duties of their AWS resources. Internally, AWS aligns with ISO 27001 standards for managing segregation of duties. Refer to ISO 27001 standard, Annex A, domain 6 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Identity & Access Management *Source Code Access Restriction*	IAM-06.1	Are controls in place to prevent unauthorized access to your application, program or object source code, and assure it is restricted to authorized personnel only?	In alignment with ISO 27001 standards, AWS has established formal policies, procedures to delineate the minimum standards for logical access to AWS resources. AWS SOC reports outlines the controls in place to manage access provisioning to AWS resources. Refer to AWS Overview of Security Processes for additional details - available at http://aws.amazon.com/security.
	IAM-06.2	Are controls in place to prevent unauthorized access to tenant application, program or object source code, and assure it is restricted to authorized personnel only?	
Identity & Access Management *Third Party Access*	IAM-07.1	Do you provide multi-failure disaster recovery capability?	AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Each Availability Zone is designed as an independent failure zone. In case of failure, automated processes move customer data traffic away from the affected area. AWS SOC reports provides further details. ISO 27001 standard Annex A, domain 15 provides additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification.
	IAM-07.2	Do you monitor service continuity with upstream providers in the event of provider failure?	
	IAM-07.3	Do you have more than one provider for each service you depend on?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	IAM-07.4	Do you provide access to operational redundancy and continuity summaries, including the services you depend on?	
	IAM-07.5	Do you provide the tenant the ability to declare a disaster?	
	IAM-07.6	Do you provided a tenant-triggered failover option?	
	IAM-07.7	Do you share your business continuity and redundancy plans with your tenants?	
Identity & Access Management *User Access Restriction / Authorization*	IAM-08.1	Do you document how you grant and approve access to tenant data?	AWS Customers retain control and ownership of their data. Controls in place limit access to systems and data and provide that access to systems or data is restricted and monitored. In addition, customer data and server instances are logically isolated from other customers by default. Privileged user access controls are reviewed by an independent auditor during the AWS SOC, ISO 27001, PCI, ITAR, and FedRAMP audits.
	IAM-08.2	Do you have a method of aligning provider and tenant data classification methodologies for access control purposes?	
Identity & Access Management *User Access Authorization*	IAM-09.1	Does your management provision the authorization and restrictions for user access (e.g. employees, contractors, customers (tenants), business partners and/or suppliers) prior to their access to data and any owned or managed (physical and virtual) applications, infrastructure systems and network components?	Unique user identifiers are created as part of the onboarding workflow process in the AWS human resources management system. The device provisioning process helps ensure unique identifiers for devices. Both processes include manager approval to establish the user account or device. Initial authenticators are delivered to user's in-person and to devices as part of the provisioning process. Internal users can associate SSH public keys with their account. System account authenticators are provided to the requestor as part of the account creation process after the identity of the requestor is verified.
	IAM-09.2	Do you provide upon request user access (e.g. employees, contractors, customers (tenants), business partners and/or suppliers) to data and any owned or managed (physical and virtual) applications, infrastructure systems and network components?	AWS has established controls to address the threat of inappropriate insider access. All certifications and third-party attestations evaluate logical access preventative and detective controls. In addition, periodic risk assessments focus on how insider access is controlled and monitored.
Identity & Access Management *User Access Reviews*	IAM-10.1	Do you require at least annual certification of entitlements for all system users and administrators (exclusive of users maintained by your tenants)?	In alignment with ISO 27001 standard, all access grants are reviewed on a periodic basis; explicit re-approval is required or access to the resource is automatically revoked. Controls specific to User Access reviews are outlined in the SOC reports. Exceptions in the User entitlement controls are documented in the SOC reports. Refer to ISO 27001 standards, Annex A, domain 9 for additional details.

Control Group	CID	Consensus Assessment Questions	AWS Response
	IAM -10.2	If users are found to have inappropriate entitlements, are all remediation and certification actions recorded?	AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	IAM -10.3	Will you share user entitlement remediation and certification reports with your tenants, if inappropriate access may have been allowed to tenant data?	
Identity & Access Management *User Access Revocation*	IAM -11.1	Is timely deprovisioning, revocation or modification of user access to the organizations systems, information assets and data implemented upon any change in status of employees, contractors, customers, business partners or involved third parties?	Access is automatically revoked when an employee's record is terminated in Amazon's Human Resources system. When changes in an employee's job function occur, continued access must be explicitly approved to the resource or it will be automatically revoked. AWS SOC reports provides further details on User access revocation. In addition the AWS Security White paper, section "Employee Lifecycle" provides additional information. Refer to ISO 27001 Annex A, domain 9 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	IAM -11.2	Is any change in user access status intended to include termination of employment, contract or agreement, change of employment or transfer within the organization?	
Identity & Access Management *User ID Credentials*	IAM -12.1	Do you support use of, or integration with, existing customer-based Single Sign On (SSO) solutions to your service?	The AWS Identity and Access Management (IAM) service provides identity federation to the AWS Management Console. Multi-factor authentication is an optional feature that a customer can utilize. Refer to the AWS website for additional details - http://aws.amazon.com/mfa. AWS Identity and Access Management (IAM) supports identity federation for delegated access to the AWS Management Console or AWS APIs. With identity federation, external identities (federated users) are granted secure access to resources in your AWS account without having to create IAM users. These external identities can come from your corporate identity provider (such as Microsoft Active Directory or from the AWS Directory Service) or from a web identity provider, such as Amazon Cognito, Login with Amazon, Facebook, Google or any OpenID Connect (OIDC) compatible provider.
	IAM -12.2	Do you use open standards to delegate authentication capabilities to your tenants?	
	IAM -12.3	Do you support identity federation standards (SAML, SPML, WS-Federation, etc.) as a means of authenticating/authorizing users?	
	IAM -12.4	Do you have a Policy Enforcement Point capability (e.g., XACML) to enforce regional legal and policy constraints on user access?	
	IAM -12.5	Do you have an identity management system (enabling classification of data for a tenant) in place to enable both role-based and context-based entitlement to data?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	IAM -12.6	Do you provide tenants with strong (multifactor) authentication options (digital certs, tokens, biometrics, etc.) for user access?	
	IAM -12.7	Do you allow tenants to use third-party identity assurance services?	
	IAM -12.8	Do you support password (minimum length, age, history, complexity) and account lockout (lockout threshold, lockout duration) policy enforcement?	AWS Identity and Access Management (IAM) enables customers to securely control access to AWS services and resources for their users. Additional information about IAM can be found on website at https://aws.amazon.com/iam/. AWS SOC reports provides details on the specific control activities executed by AWS.
	IAM -12.9	Do you allow tenants/customers to define password and account lockout policies for their accounts?	
	IAM -12.10	Do you support the ability to force password changes upon first logon?	
	IAM -12.11	Do you have mechanisms in place for unlocking accounts that have been locked out (e.g., self-service via email, defined challenge questions, manual unlock)?	
Identity & Access Management *Utility Programs Access*	IAM -13.1	Are utilities that can significantly manage virtualized partitions (e.g., shutdown, clone, etc.) appropriately restricted and monitored?	In alignment with ISO 27001 standards, system utilities are appropriately restricted and monitored. AWS SOC reports provides details on the specific control activities executed by AWS. Refer to AWS Overview of Security Processes for additional details - available at http://aws.amazon.com/security.
	IAM -13.2	Do you have a capability to detect attacks that target the virtual infrastructure directly (e.g., shimming, Blue Pill, Hyper jumping, etc.)?	
	IAM -13.3	Are attacks that target the virtual infrastructure prevented with technical controls?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Infrastructure & Virtualization Security *Audit Logging / Intrusion Detection*	IVS-01.1	Are file integrity (host) and network intrusion detection (IDS) tools implemented to help facilitate timely detection, investigation by root cause analysis and response to incidents?	AWS Incident response program (detection, investigation and response to incidents) has been developed in alignment with ISO 27001 standards, system utilities are appropriately restricted and monitored. AWS SOC reports provides additional details on controls in place to restrict system access. Refer to AWS Overview of Security Processes for additional details - available at http://aws.amazon.com/security.
	IVS-01.2	Is physical and logical user access to audit logs restricted to authorized personnel?	
	IVS-01.3	Can you provide evidence that due diligence mapping of regulations and standards to your controls/architecture/processes has been done?	
	IVS-01.4	Are audit logs centrally stored and retained?	In alignment with ISO 27001 standards, AWS information systems utilize internal system clocks synchronized via NTP (Network Time Protocol). AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. AWS utilizes automated monitoring systems to provide a high level of service performance and availability. Proactive monitoring is available through a variety of online tools both for internal and external use. Systems within AWS are extensively instrumented to monitor key operational metrics. Alarms are configured to notify operations and management personnel when early warning thresholds are crossed on key operational metrics. An on-call schedule is used such that personnel are always available to respond to operational issues. This includes a pager system so alarms are quickly and reliably communicated to operations personnel. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
	IVS-01.5	Are audit logs reviewed on a regular basis for security events (e.g., with automated tools)?	
Infrastructure & Virtualization Security *Change Detection*	IVS-02.1	Do you log and alert any changes made to virtual machine images regardless of their running state (e.g. dormant, off or running)?	Virtual Machines are assigned to customers as a part of the EC2 service. Customers retain control over what resources are being used and where resources reside. Refer to the AWS website for additional details - http://aws.amazon.com.
	IVS-02.2	Are changes made to virtual machines, or moving of an image and subsequent validation of the image's integrity, made immediately available to customers through electronic methods (e.g. portals or alerts)?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Infrastructure & Virtualization Security *Clock Synchronization*	IVS-03.1	Do you use a synchronized time-service protocol (e.g., NTP) to ensure all systems have a common time reference?	In alignment with ISO 27001 standards, AWS information systems utilize internal system clocks synchronized via NTP (Network Time Protocol). AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Infrastructure & Virtualization Security *Capacity / Resource Planning*	IVS-04.1	Do you provide documentation regarding what levels of system (network, storage, memory, I/O, etc.) oversubscription you maintain and under what circumstances/scenarios?	Details regarding AWS Service Limits and how to request an increase for specific services is available on the AWS website at http://docs.aws.amazon.com/general/latest/gr/aws_service_limits.html. AWS manages capacity and utilization data in alignment with ISO 27001 standard. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	IVS-04.2	Do you restrict use of the memory oversubscription capabilities present in the hypervisor?	
	IVS-04.3	Do your system capacity requirements take into account current, projected and anticipated capacity needs for all systems used to provide services to the tenants?	
	IVS-04.4	Is system performance monitored and tuned in order to continuously meet regulatory, contractual and business requirements for all the systems used to provide services to the tenants?	
Infrastructure & Virtualization Security *Management - Vulnerability Management*	IVS-05.1	Do security vulnerability assessment tools or services accommodate the virtualization technologies being used (e.g. virtualization aware)?	Amazon EC2 currently utilizes a highly customized version of the Xen hypervisor. The hypervisor is regularly assessed for new and existing vulnerabilities and attack vectors by internal and external penetration teams, and is well suited for maintaining strong isolation between guest virtual machines. The AWS Xen hypervisor security is regularly evaluated by independent auditors during assessments and audits. Regular internal and external vulnerability scans are performed on the host operating system, web application and databases in the AWS environment utilizing a variety of tools. Vulnerability scanning and remediation practices are regularly reviewed as a part of AWS continued compliance with PCI DSS and FedRAMP.
Infrastructure & Virtualization Security *Network Security*	IVS-06.1	For your IaaS offering, do you provide customers with guidance on how to create a layered security architecture equivalence using your virtualized solution?	AWS website provides guidance on creating a layered security architecture in a number of white papers available via the AWS public website - http://aws.amazon.com/documentation/.
	IVS-06.2	Do you regularly update network architecture diagrams that include data flows between security domains/zones?	Boundary protection devices that employ rule sets, access control lists (ACL), and configurations enforce the flow of information between network fabrics. Several network fabrics exist at Amazon, each separated by devices that

Control Group	CID	Consensus Assessment Questions	AWS Response
	IVS-06.3	Do you regularly review for appropriateness the allowed access/connectivity (e.g., firewall rules) between security domains/zones within the network?	control the flow of information between fabrics. The flow of information between fabrics is established by approved authorizations, which exist as access control lists (ACL) which reside on these devices. These devices control the flow of information between fabrics as mandated by these ACLs. ACLs are defined, approved by appropriate personnel, managed and deployed using AWS ACL-manage tool. Amazon's Information Security team approves these ACLs. Approved firewall rule sets and access control lists between network fabrics restrict the flow of information to specific information system services. Access control lists and rule sets are reviewed and approved, and are automatically pushed to boundary protection devices on a periodic basis (at least every 24 hours) to ensure rule-sets and access control lists are up-to-date. AWS Network Management is regularly reviewed by independent third-party auditors as a part of AWS ongoing compliance with SOC, PCI DSS, ISO 27001 and FedRAMPsm. AWS implements least privilege throughout its infrastructure components. AWS prohibits all ports and protocols that do not have a specific business purpose. AWS follows a rigorous approach to minimal implementation of only those features and functions that are essential to use of the device. Network scanning is performed and any unnecessary ports or protocols in use are corrected. Regular internal and external vulnerability scans are performed on the host operating system, web application and databases in the AWS environment utilizing a variety of tools. Vulnerability scanning and remediation practices are regularly reviewed as a part of AWS continued compliance with PCI DSS and FedRAMP.
	IVS-06.4	Are all firewall access control lists documented with business justification?	
Infrastructure & Virtualization Security *OS Hardening and Base Controls*	IVS-07.1	Are operating systems hardened to provide only the necessary ports, protocols and services to meet business needs using technical controls (i.e antivirus, file integrity monitoring and logging) as part of their baseline build standard or template?	
Infrastructure & Virtualization Security *Production / Nonproduction Environments*	IVS-08.1	For your SaaS or PaaS offering, do you provide tenants with separate environments for production and test processes?	AWS Customers retain the ability and the responsibility to create and maintain production and test environments. AWS website provides guidance on creating an environment utilizing the AWS services - http://aws.amazon.com/documentation/.
	IVS-08.2	For your IaaS offering, do you provide tenants with guidance on how to create suitable production and test environments?	
	IVS-08.3	Do you logically and physically segregate production and non-production environments?	AWS Customers retain responsibility to manage their own network segmentation in adherence with their defined requirements. Internally, AWS network segmentation is aligned with ISO 27001 standards. Refer to ISO 27001 standard, Annex A. domain 13 for further detail. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Infrastructure & Virtualization Security *Segmentation*	IVS-09.1	Are system and network environments protected by a firewall or virtual firewall to ensure business and customer security requirements?	
	IVS-09.2	Are system and network environments protected by a firewall or virtual firewall to ensure compliance with legislative, regulatory and contractual requirements?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	IVS-09.3	Are system and network environments protected by a firewall or virtual firewall to ensure separation of production and non-production environments?	
	IVS-09.4	Are system and network environments protected by a firewall or virtual firewall to ensure protection and isolation of sensitive data?	
Infrastructure & Virtualization Security *VM Security - vMotion Data Protection*	IVS-10.1	Are secured and encrypted communication channels used when migrating physical servers, applications or data to virtual servers?	AWS provides customers the ability to use their own encryption mechanism for nearly all services including S3, EBS and EC2. VPC sessions are also encrypted.
	IVS-10.2	Do you use a network segregated from production-level networks when migrating physical servers, applications or data to virtual servers?	AWS Customers retain control and ownership of their own data. AWS provides customers the ability to maintain and develop production and non-production environments. It is the responsibility of the customer to ensure that their production data is not replicated to non-production environments.
Infrastructure & Virtualization Security *VMM Security - Hypervisor Hardening*	IVS-11.1	Do you restrict personnel access to all hypervisor management functions or administrative consoles for systems hosting virtualized systems based on the principle of least privilege and supported through technical controls (e.g. two-factor authentication, audit trails, IP address filtering, firewalls and TLS-encapsulated communications to the administrative consoles)?	AWS employs the concept of least privilege, allowing only the necessary access for users to accomplish their job function. When user accounts are created, user accounts are created to have minimal access. Access above these least privileges requires appropriate authorization. Refer to AWS SOC reports for more information on Access Controls.
Infrastructure & Virtualization Security *Wireless Security*	IVS-12.1	Are policies and procedures established and mechanisms configured and implemented to protect the wireless network environment perimeter and to restrict unauthorized wireless traffic?	Policies, procedures and mechanisms to protect AWS network environment are in place. AWS security controls are reviewed by independent external auditors during audits for our SOC, PCI DSS, ISO 27001 and FedRAMP compliance.
	IVS-12.2	Are policies and procedures established and mechanisms implemented to ensure wireless security settings are enabled with strong encryption for authentication and transmission, replacing vendor default settings? (e.g., encryption keys, passwords, SNMP community strings)	

Control Group	CID	Consensus Assessment Questions	AWS Response
	IVS-12.3	Are policies and procedures established and mechanisms implemented to protect wireless network environments and detect the presence of unauthorized (rogue) network devices for a timely disconnect from the network?	
Infrastructure & Virtualization Security *Network Architecture*	IVS-13.1	Do your network architecture diagrams clearly identify high-risk environments and data flows that may have legal compliance impacts?	AWS Customers retain responsibility to manage their own network segmentation in adherence with their defined requirements. Internally, AWS network segmentation is aligned with the ISO 27001 standard. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	IVS-13.2	Do you implement technical measures and apply defense-in-depth techniques (e.g., deep packet analysis, traffic throttling and black-holing) for detection and timely response to network-based attacks associated with anomalous ingress or egress traffic patterns (e.g., MAC spoofing and ARP poisoning attacks) and/or distributed denial-of-service (DDoS) attacks?	AWS Security regularly scans all Internet facing service endpoint IP addresses for vulnerabilities (these scans do not include customer instances). AWS Security notifies the appropriate parties to remediate any identified vulnerabilities. In addition, external vulnerability threat assessments are performed regularly by independent security firms. Findings and recommendations resulting from these assessments are categorized and delivered to AWS leadership. In addition, the AWS control environment is subject to regular internal and external risk assessments. AWS engages with external certifying bodies and independent auditors to review and test the AWS overall control environment. AWS security controls are reviewed by independent external auditors during audits for our SOC, PCI DSS, ISO 27001 and FedRAMP compliance.
Interoperability & Portability *APIs*	IPY-01	Do you publish a list of all APIs available in the service and indicate which are standard and which are customized?	Details regarding AWS APIs can be found on the AWS website at https://aws.amazon.com/documentation/. In alignment with ISO 27001 standards, AWS has established formal policies, procedures to delineate the minimum standards for logical access to AWS resources. AWS SOC reports outlines the controls in place to manage access provisioning to AWS resources. Refer to AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
Interoperability & Portability *Data Request*	IPY-02	Is unstructured customer data available on request in an industry-standard format (e.g., .doc, .xls, or .pdf)?	
Interoperability & Portability *Policy & Legal*	IPY-03.1	Do you provide policies and procedures (i.e. service level agreements) governing the use of APIs for interoperability between your service and third-party applications?	
	IPY-03.2	Do you provide policies and procedures (i.e. service level agreements) governing the migration of application data to and from your service?	Customer retain control and ownership of their content. Customers can choose how they migrate applications and content both on and off the AWS platform at their discretion.

Control Group	CID	Consensus Assessment Questions	AWS Response
Interoperability & Portability *Standardized Network Protocols*	IPY-04.1	Can data import, data export and service management be conducted over secure (e.g., non-clear text and authenticated), industry accepted standardized network protocols?	AWS allows customers to move data as needed on and off AWS storage. Refer to http://aws.amazon.com/choosing-a-cloud-platform for more information on Storage options.
	IPY-04.2	Do you provide consumers (tenants) with documentation detailing the relevant interoperability and portability network protocol standards that are involved?	
Interoperability & Portability *Virtualization*	IPY-05.1	Do you use an industry-recognized virtualization platform and standard virtualization formats (e,g., OVF) to help ensure interoperability?	Amazon EC2 currently utilizes a highly customized version of the Xen hypervisor. The hypervisor is regularly assessed for new and existing vulnerabilities and attack vectors by internal and external penetration teams, and is well suited for maintaining strong isolation between guest virtual machines. The AWS Xen hypervisor security is regularly evaluated by independent auditors during assessments and audits. Refer to the AWS Cloud Security Whitepaper for additional details - available at http://aws.amazon.com/security.
	IPY-05.2	Do you have documented custom changes made to any hypervisor in use, and all solution-specific virtualization hooks available for customer review?	
Mobile Security *Anti-Malware*	MOS-01	Do you provide anti-malware training specific to mobile devices as part of your information security awareness training?	AWS' program, processes and procedures to managing antivirus / malicious software is in alignment with ISO 27001 standards. Refer to ISO 27001 standard, Annex A, domain 12 for additional information.
Mobile Security *Application Stores*	MOS-02	Do you document and make available lists of approved application stores for mobile devices accessing or storing company data and/or company systems?	AWS has established an information security framework and policies and has effectively integrated the ISO 27001 certifiable framework based on ISO 27002 controls, American Institute of Certified Public Accountants (AICPA) Trust Services Principles, the PCI DSS v3.1 and the National Institute of Standards and Technology (NIST) Publication 800-53 (Recommended Security Controls for Federal Information Systems). Customers retain the control and responsibility of their data and associated media assets. It is the responsibility of the customer to manage mobile security devices and the access to the customer's content.
Mobile Security *Approved Applications*	MOS-03	Do you have a policy enforcement capability (e.g., XACML) to ensure that only approved applications and those from approved application stores be loaded onto a mobile device?	
Mobile Security *Approved Software for BYOD*	MOS-04	Does your BYOD policy and training clearly state which applications and applications stores are approved for use on BYOD devices?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Mobile Security *Awareness and Training*	MOS -05	Do you have a documented mobile device policy in your employee training that clearly defines mobile devices and the accepted usage and requirements for mobile devices?	
Mobile Security *Cloud Based Services*	MOS -06	Do you have a documented list of pre-approved cloud based services that are allowed to be used for use and storage of company business data via a mobile device?	
Mobile Security *Compatibility*	MOS -07	Do you have a documented application validation process for testing device, operating system and application compatibility issues?	
Mobile Security *Device Eligibility*	MOS -08	Do you have a BYOD policy that defines the device(s) and eligibility requirements allowed for BYOD usage?	
Mobile Security *Device Inventory*	MOS -09	Do you maintain an inventory of all mobile devices storing and accessing company data which includes device status (os system and patch levels, lost or decommissioned, device assignee)?	
Mobile Security *Device Management*	MOS -10	Do you have a centralized mobile device management solution deployed to all mobile devices that are permitted to store, transmit, or process company data?	
Mobile Security *Encryption*	MOS -11	Does your mobile device policy require the use of encryption for either the entire device or for data identified as sensitive enforceable through technology controls for all mobile devices?	
Mobile Security *Jailbreaking and Rooting*	MOS -12.1	Does your mobile device policy prohibit the circumvention of built-in security controls on mobile devices (e.g., jailbreaking or rooting)?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	MOS -12.2	Do you have detective and preventative controls on the device or via a centralized device management system which prohibit the circumvention of built-in security controls?	
Mobile Security *Legal*	MOS -13.1	Does your BYOD policy clearly define the expectation of privacy, requirements for litigation, e-discovery and legal holds?	Customers retain the control and responsibility of their data and associated media assets. It is the responsibility of the customer to manage mobile security devices and the access to the customer's content.
	MOS -13.2	Do you have detective and preventative controls on the device or via a centralized device management system which prohibit the circumvention of built-in security controls?	
Mobile Security *Lockout Screen*	MOS -14	Do you require and enforce via technical controls an automatic lockout screen for BYOD and company owned devices?	
Mobile Security *Operating Systems*	MOS -15	Do you manage all changes to mobile device operating systems, patch levels and applications via your company's change management processes?	
Mobile Security *Passwords*	MOS -16.1	Do you have password policies for enterprise issued mobile devices and/or BYOD mobile devices?	
	MOS -16.2	Are your password policies enforced through technical controls (i.e. MDM)?	
	MOS -16.3	Do your password policies prohibit the changing of authentication requirements (i.e. password/PIN length) via a mobile device?	
Mobile Security *Policy*	MOS -17.1	Do you have a policy that requires BYOD users to perform backups of specified corporate data?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	MOS -17.2	Do you have a policy that requires BYOD users to prohibit the usage of unapproved application stores?	
	MOS -17.3	Do you have a policy that requires BYOD users to use anti-malware software (where supported)?	
Mobile Security *Remote Wipe*	MOS -18.1	Does your IT provide remote wipe or corporate data wipe for all company-accepted BYOD devices?	
	MOS -18.2	Does your IT provide remote wipe or corporate data wipe for all company-assigned mobile devices?	
Mobile Security *Security Patches*	MOS -19.1	Do your mobile devices have the latest available security-related patches installed upon general release by the device manufacturer or carrier?	
	MOS -19.2	Do your mobile devices allow for remote validation to download the latest security patches by company IT personnel?	
Mobile Security *Users*	MOS -20.1	Does your BYOD policy clarify the systems and servers allowed for use or access on the BYOD-enabled device?	
	MOS - 20.2	Does your BYOD policy specify the user roles that are allowed access via a BYOD-enabled device?	
Security Incident Management, E-Discovery & Cloud Forensics *Contact / Authority Maintenance*	SEF-01.1	Do you maintain liaisons and points of contact with local authorities in accordance with contracts and appropriate regulations?	AWS maintains contacts with industry bodies, risk and compliance organizations, local authorities and regulatory bodies as required by the ISO 27001 standard. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Security Incident Management, E-Discovery & Cloud Forensics *Incident Management*	SEF-02.1	Do you have a documented security incident response plan?	AWS has implemented a formal, documented incident response policy and program. The policy addresses purpose, scope, roles, responsibilities, and management commitment and has been developed in alignment with the ISO 27001 and NIST 800-53 standards. Below is an outline of the three-phased approach AWS has implemented to manage incidents:
	SEF-02.2	Do you integrate customized tenant requirements into your security incident response plans?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	SEF-02.3	Do you publish a roles and responsibilities document specifying what you vs. your tenants are responsible for during security incidents?	1. Activation and Notification Phase: Incidents for AWS begin with the detection of an event. This can come from several sources including: - Metrics and alarms - AWS maintains an exceptional situational awareness capability, most issues are rapidly detected from 24x7x365 monitoring and alarming of real time metrics and service dashboards. The majority of incidents are detected in this manner. AWS utilizes early indicator alarms to proactively identify issues that may ultimately impact Customers. - Trouble ticket entered by an AWS employee - Calls to the 24X7X365 technical support hotline. If the event meets incident criteria, then the relevant on-call support engineer will start an engagement utilizing AWS Event Management Tool system to page relevant program resolvers (e.g. Security team). The resolvers will perform an analysis of the incident to determine if additional resolvers should be engaged and to determine the approximate root cause. 2. Recovery Phase - the relevant resolvers will perform break fix to address the incident. Once troubleshooting, break fix and affected components are addressed, the call leader will assign next steps in terms of follow -up documentation and follow- up actions and end the call engagement. 3. Reconstitution Phase - Once the relevant fix activities are complete the call leader will declare that the recovery phase is complete. Post mortem and deep root cause analysis of the incident will be assigned to the relevant team. The results of the post mortem will be reviewed by relevant senior management and relevant actions such as design changes etc. will be captured in a Correction of Errors (COE) document and tracked to completion. In addition to the internal communication mechanisms detailed above, AWS has also implemented various methods of external communication to support its customer base and community. Mechanisms are in place to allow the customer support team to be notified of operational issues that impact the customer experience. A "Service Health Dashboard" is available and maintained by the customer support team to alert customers to any issues that may be of broad impact. The AWS incident management program is reviewed by independent external auditors during audits for our SOC, PCI DSS, ISO 27001 and FedRAMP compliance. **The AWS Cloud Security Whitepaper** available at http://aws.amazon.com/security provides additional details.
	SEF-02.4	Have you tested your security incident response plans in the last year?	
Security Incident Management, E-Discovery & Cloud Forensics *Incident Reporting*	SEF-03.1	Does your security information and event management (SIEM) system merge data sources (app logs, firewall logs, IDS logs, physical access logs, etc.) for granular analysis and alerting?	
	SEF-03.2	Does your logging and monitoring framework allow isolation of an incident to specific tenants?	
Security Incident Management, E-Discovery & Cloud Forensics *Incident Response Legal Preparation*	SEF-04.1	Does your incident response plan comply with industry standards for legally admissible chain-of-custody management processes and controls?	
	SEF-04.2	Does your incident response capability include the use of legally admissible forensic data collection and analysis techniques?	
	SEF-04.3	Are you capable of supporting litigation holds (freeze of data from a specific point in time) for a specific tenant without freezing other tenant data?	
	SEF-04.4	Do you enforce and attest to tenant data separation when producing data in response to legal subpoenas?	
Security Incident Management, E-Discovery & Cloud Forensics *Incident Response Metrics*	SEF-05.1	Do you monitor and quantify the types, volumes and impacts on all information security incidents?	AWS Security Metrics are monitored and analyzed in accordance with ISO 27001 standard. Refer to ISO 27001 Annex A, domain 16 for further details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	SEF-05.2	Will you share statistical information for security incident data with your tenants upon request?	

Control Group	CID	Consensus Assessment Questions	AWS Response
Supply Chain Management, Transparency and Accountability *Data Quality and Integrity*	STA-01.1	Do you inspect and account for data quality errors and associated risks, and work with your cloud supply-chain partners to correct them?	Customers retain control and ownership over the quality of their data and potential quality errors that may arise through their usage of AWS services. Refer to AWS SOC report for specific details in relation to Data Integrity and Access Management (including least privilege access)
	STA-01.2	Do you design and implement controls to mitigate and contain data security risks through proper separation of duties, role-based access, and least-privileged access for all personnel within your supply chain?	
Supply Chain Management, Transparency and Accountability *Incident Reporting*	STA-02.1	Do you make security incident information available to all affected customers and providers periodically through electronic methods (e.g. portals)?	AWS' incident response program, plans and procedures have been developed in alignment with ISO 27001 standard. The AWS SOC reports provides details on the specific control activities executed by AWS. The AWS Cloud Security Whitepaper (available at http://aws.amazon.com/security) provides additional details.
Supply Chain Management, Transparency and Accountability *Network / Infrastructure Services*	STA-03.1	Do you collect capacity and use data for all relevant components of your cloud service offering?	AWS manages capacity and utilization data in alignment with ISO 27001 standard. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	STA-03.2	Do you provide tenants with capacity planning and use reports?	
Supply Chain Management, Transparency and Accountability *Provider Internal Assessments*	STA-04.1	Do you perform annual internal assessments of conformance and effectiveness of your policies, procedures, and supporting measures and metrics?	AWS procurement and supply chain team maintain relationships with all AWS suppliers. Refer to ISO 27001 standards; Annex A, domain 15 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
Supply Chain Management, Transparency and Accountability *Third Party Agreements*	STA-05.1	Do you select and monitor outsourced providers in compliance with laws in the country where the data is processed, stored and transmitted?	Personnel security requirements for third-party providers supporting AWS systems and devices are established in a Mutual Non-Disclosure Agreement between AWS' parent organization, Amazon.com, and the respective third-party provider. The Amazon Legal Counsel and the AWS Procurement team define AWS third party provider personnel security requirements in contract agreements with the third party provider. All persons working with AWS information must at a minimum, meet the screening process for pre-employment background checks and sign a Non-Disclosure Agreement (NDA) prior to being granted access to AWS information. AWS does not generally outsource development of AWS services to subcontractors.
	STA-05.2	Do you select and monitor outsourced providers in compliance with laws in the country where the data originates?	
	STA-05.3	Does legal counsel review all third-party agreements?	
	STA-05.4	Do third-party agreements include provision for the security and protection of information and assets?	

Control Group	CID	Consensus Assessment Questions	AWS Response
	STA-05.5	Do you provide the client with a list and copies of all sub processing agreements and keep this updated?	
Supply Chain Management, Transparency and Accountability *Supply Chain Governance Reviews*	STA-06.1	Do you review the risk management and governance processes of partners to account for risks inherited from other members of that partner's supply chain?	AWS maintains formal agreements with key third party suppliers and implements appropriate relationship management mechanisms in line with their relationship to the business. AWS' third party management processes are reviewed by independent auditors as part of AWS ongoing compliance with SOC and ISO 27001.
Supply Chain Management, Transparency and Accountability *Supply Chain Metrics*	STA-07.1	Are policies and procedures established, and supporting business processes and technical measures implemented, for maintaining complete, accurate and relevant agreements (e.g., SLAs) between providers and customers (tenants)?	
	STA-07.2	Do you have the ability to measure and address non-conformance of provisions and/or terms across the entire supply chain (upstream/downstream)?	
	STA-07.3	Can you manage service-level conflicts or inconsistencies resulting from disparate supplier relationships?	
	STA-07.4	Do you review all agreements, policies and processes at least annually?	
Supply Chain Management, Transparency and Accountability *Third Party Assessment*	STA-08.1	Do you assure reasonable information security across your information supply chain by performing an annual review?	
	STA-8.2	Does your annual review include all partners/third-party providers upon which your information supply chain depends?	
Supply Chain Management, Transparency	STA-09.1	Do you permit tenants to perform independent vulnerability assessments?	Customers can request permission to conduct scans of their cloud infrastructure as long as they are limited to the customer's instances and do not violate the AWS Acceptable Use Policy. Advance approval for

Control Group	CID	Consensus Assessment Questions	AWS Response
and Accountability *Third Party Audits*	STA-09.2	Do you have external third party services conduct vulnerability scans and periodic penetration tests on your applications and networks?	these types of scans can be initiated by submitting a request via the AWS Vulnerability / Penetration Testing Request Form. AWS Security regularly engages independent security firms to perform external vulnerability threat assessments. The AWS SOC reports provides additional details on the specific control activities executed by AWS.
Threat and Vulnerability Management *Antivirus / Malicious Software*	TVM-01.1	Do you have anti-malware programs that support or connect to your cloud service offerings installed on all of your systems?	AWS' program, processes and procedures to managing antivirus / malicious software is in alignment with ISO 27001 standards. Refer to AWS SOC reports provides further details. In addition, refer to ISO 27001 standard, Annex A, domain 12 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	TVM-01.2	Do you ensure that security threat detection systems using signatures, lists or behavioral patterns are updated across all infrastructure components within industry accepted time frames?	
Threat and Vulnerability Management *Vulnerability / Patch Management*	TVM-02.1	Do you conduct network-layer vulnerability scans regularly as prescribed by industry best practices?	Customers retain control of their own guest operating systems, software and applications and are responsible for performing vulnerability scans and patching of their own systems. Customers can request permission to conduct scans of their cloud infrastructure as long as they are limited to the customer's instances and do not violate the AWS Acceptable Use Policy. AWS Security regularly scans all Internet-facing service endpoint IP addresses for vulnerabilities. AWS Security notifies the appropriate parties to remediate any identified vulnerabilities. AWS' own maintenance and system patching generally do not impact customers. Refer to AWS Cloud Security Whitepaper for further information - available at http://aws.amazon.com/security. Refer to ISO 27001 standard, Annex A, domain 12 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	TVM-02.2	Do you conduct application-layer vulnerability scans regularly as prescribed by industry best practices?	
	TVM-02.3	Do you conduct local operating system-layer vulnerability scans regularly as prescribed by industry best practices?	
	TVM-02.4	Will you make the results of vulnerability scans available to tenants at their request?	
	TVM-02.5	Do you have a capability to rapidly patch vulnerabilities across all of your computing devices, applications and systems?	
	TVM-02.6	Will you provide your risk-based systems patching time frames to your tenants upon request?	
Threat and Vulnerability Management *Mobile Code*	TVM-03.1	Is mobile code authorized before its installation and use, and the code configuration checked, to ensure that the authorized mobile code operates according to a clearly defined security policy?	AWS allows customers to manage client and mobile applications to their own requirements.

Control Group	CID	Consensus Assessment Questions	AWS Response
	TVM-03.2	Is all unauthorized mobile code prevented from executing?	

Appendix B: AWS alignment with the Australian Signals Directorate (ASD) Cloud Computing Security Considerations

The Cloud Computing Security Considerations was created to assist agencies in performing a risk assessment of services offered by Cloud Service Providers. The following provides AWS alignment to the Security Considerations, published on September 2012. For additional details refer to: http://www.asd.gov.au/publications/csocprotect/Cloud_Computing_Security_Considerations.pdf

Key Area	Questions	AWS RESPONSE
Maintaining Availability and Business Functionality	a. Business criticality of data or functionality. Am I moving business critical data or functionality to the cloud?	AWS customers retain control and ownership of their content. Customers are responsible for the classification and use of their content.
	b. Vendor's business continuity and disaster recovery plan. Can I thoroughly review a copy of the vendor's business continuity and disaster recovery plan that covers the availability and restoration of both my data and the vendor's services that I use? How much time does it take for my data and the services that I use to be recovered after a disaster, and do the vendor's other customers that are larger and pay more money than me get prioritization?	AWS customers retain control and ownership of their data. AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Each Availability Zone is designed as an independent failure zone. In case of failure, automated processes move customer data traffic away from the affected area. AWS SOC 1 Type 2 report provides further details. ISO 27001 standard Annex A, domain 11 provides additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification. Customers utilize AWS to enable faster disaster recovery of their critical IT systems without incurring the infrastructure expense of a second physical site. The AWS cloud supports many popular disaster recovery (DR) architectures from "pilot light" environments that are ready to scale up at a moment's notice to "hot standby" environments that enable rapid failover. To learn more about Disaster Recovery on AWS visit https://aws.amazon.com/disaster-recovery/. AWS provides customers with the capability to implement a robust continuity plan, including the utilization of frequent server instance back-ups, data redundancy replication, and multi-region/availability zone deployment architectures. AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Each Availability Zone is designed as an independent failure zone. In case of failure, automated processes move customer data traffic away from the affected area. AWS data centers incorporate physical protection against environmental risks. AWS' physical protection against environmental risks has been validated by an independent auditor and has been certified as being in alignment with ISO 27002 best practices. Refer to ISO 27001 standard, Annex A domain 9 and the AWS SOC 1 Type II report for additional information.

Key Area	Questions	AWS RESPONSE
	c. My data backup plan. Will I spend additional money to maintain an up to date backup copy of my data located either at my agency's premises, or stored with a second vendor that has no common points of failure with the first vendor?	AWS customers retain control and ownership of their content and it is the customer's responsibility to manage their data backup plans. AWS allows customers to move data as needed on and off AWS storage. AWS Import/Export service for S3 accelerates moving large amounts of data into and out of AWS using portable storage devices for transport. AWS allows customers to perform their own backups to tapes using their own tape backup service provider. However, a tape backup is not a service provided by AWS. Amazon S3 service is designed to drive the likelihood of data loss to near zero percent and the durability equivalent of multi-site copies of data objects is achieved through data storage redundancy. For information on data durability and redundancy, please refer to the AWS website. AWS offers a range of cloud computing services to support Disaster Recovery. To learn more about Disaster Recovery on AWS visit https://aws.amazon.com/disaster-recovery/.
	d. My business continuity and disaster recovery plan. Will I spend additional money to replicate my data or business functionality with a second vendor that uses a different data center and ideally has no common points of failure with the first vendor? This replication should preferably be configured to automatically "failover", so that if one vendor's services become unavailable, control is automatically and smoothly transitioned to the other vendor.	Customers retain control and ownership of their data. Customers can export their AMIs and use them on premise or at another provider (subject to software licensing restrictions). Refer to the AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security. AWS allows customers to move data as needed on and off AWS storage. AWS Import/Export service for S3 accelerates moving large amounts of data into and out of AWS using portable storage devices for transport. AWS allows customers to perform their own backups to tapes using their own tape backup service provider. However, a tape backup is not a service provided by AWS. AWS data centers are built in clusters in various global regions. All data centers are online and serving customers; no data center is "cold." In case of failure, automated processes move customer data traffic away from the affected area. Core applications are deployed in an N+1 configuration, so that in the event of a data center failure, there is sufficient capacity to enable traffic to be load-balanced to the remaining sites. AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Each Availability Zone is designed as an independent failure zone. This means that Availability Zones are physically separated within a typical metropolitan region and are located in lower risk flood plains (specific flood zone categorization varies by Region). In addition to discrete uninterruptable power supply (UPS) and onsite backup generation facilities, they are each fed via different grids from independent utilities to further reduce single points of failure. Availability Zones are all redundantly connected to multiple tier-1 transit providers. Customers should architect their AWS usage to take advantage of multiple Regions and Availability Zones. Distributing applications across multiple Availability Zones provides the ability to remain resilient in the face of most failure modes including natural disasters or system failures. AWS SOC 1 Type 2 report provides further details. ISO 27001 standard Annex A, domain 11 provides additional details. AWS has been validated

Key Area	Questions	AWS RESPONSE
		and certified by an independent auditor to confirm alignment with ISO 27001 certification.
	e. My network connectivity to the cloud. Is the network connectivity between my agency's users and the vendor's network adequate in terms of availability, traffic throughput (bandwidth), delays (latency) and packet loss?	Customers can also choose their network path to AWS facilities, including multiple VPN endpoints in each AWS Region. In addition, AWS Direct Connect makes it easy to establish a dedicated network connection from your premises to AWS. Using AWS Direct Connect, you can establish private connectivity between AWS and your data center, office, or colocation environment, which in many cases can reduce your network costs, increase bandwidth throughput, and provide a more consistent network experience than Internet-based connections. Refer to AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security.

Key Area	Questions	AWS RESPONSE
	f. Vendor's guarantee of availability. Does the Service Level Agreement (SLA guarantee that the vendor will provide adequate system availability an quality of service, using their robust system architecture and business processes?	AWS does commit to high levels of availability in its service level agreements (SLAs). For example, Amazon EC2 commits to annual uptime percentage of at least 99.95% during the service year. Amazon S3 commits to monthly uptime percentage of at least 99.99% Service credits are provided in the case these availability metrics are not met. Customers should architect their AWS usage to take advantage of multiple Regions and Availability Zones. Distributing applications across multiple Availability Zones provides the ability to remain resilient in the face of most failure modes including natural disasters or system failures. AWS utilizes automated monitoring systems to provide a high level of service performance and availability. Proactive monitoring is available through a variety of online tools both for internal and external use. Systems within AWS are extensively instrumented to monitor key operational metrics. Alarms are configured to notify operations and management personnel when early warning thresholds are crossed on key operational metrics. An on-call schedule is used such that personnel are always available to respond to operational issues. This includes a pager system so alarms are quickly and reliably communicated to operations personnel. AWS Network Management is regularly reviewed by independent third-party auditors as a part of AWS ongoing compliance with SOC, PCI DSS, ISO 27001 and FedRAMP[sm].
	g. Impact of outages. Can I tolerate the maximum possible downtime of the SLA? Are the scheduled outage windows acceptable both in duration and time of day, or will scheduled outages interfere with my critical business processes?	AWS does not require systems to be brought offline to perform regular maintenance and system patching. AWS' own maintenance and system patching generally do not impact customers. Maintenance of instances themselves is controlled by the customer.
	h. SLA inclusion of scheduled outages. Does the SLA guaranteed availability percentage include scheduled outages?	AWS does not operate an environment with scheduled outage as AWS provides customers the ability to architect their environment to take advantage of multiple Availability Zones and regions.
	i. SLA compensation. Does the SLA adequately reflect the actual damage caused by a breach of the SLA such as unscheduled downtime or data loss?	AWS provides customer remuneration for losses they may incur due to outages in alignment with AWS' Service Level Agreement.

Key Area	Questions	AWS RESPONSE
	j. Data integrity and availability. How does the vendor implement mechanisms such as redundancy and offsite backups to prevent corruption or loss of my data, and guarantee both the integrity and the availability of my data?	AWS data integrity controls as described in AWS SOC 1 Type II report provides reasonable assurance that data integrity is maintained through all phases including transmission, storage and processing. In addition, refer to ISO 27001 standard, Annex A, domain 12 for further information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. Data centers are built in clusters in various global regions. AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region. Customers should architect their AWS usage to take advantage of multiple Regions and Availability Zones. You choose where to store your data by specifying a region (for Amazon S3) or an availability zone within a region (for EBS). Data stored in Amazon Elastic Block Store (Amazon EBS) is redundantly stored in multiple physical locations as part of normal operation of those services and at no additional charge. However, Amazon EBS replication is stored within the same availability zone, not across multiple zones. Amazon S3 provides a highly durable storage infrastructure. Objects are redundantly stored on multiple devices across multiple facilities in an Amazon S3 Region. Once stored, Amazon S3 maintains the durability of objects by quickly detecting and repairing any lost redundancy. Amazon S3 also regularly verifies the integrity of data stored using checksums. If corruption is detected, it is repaired using redundant data. Data stored in S3 is designed to provide 99.999999999% durability and 99.99% availability of objects over a given year. Refer to AWS Overview of Security Processes whitepaper for additional details - available at http://aws.amazon.com/security
	k. Data restoration. If I accidentally delete a file, email or other data, how much time does it take for my data to be partially or fully restored from backup, and is the maximum acceptable time captured in the SLA?	AWS customers retain control and ownership of their data. AWS provides customers the flexibility to place instances and store data within multiple geographic regions as well as across multiple Availability Zones within each region.
	l. Scalability. How much available spare computing resources does the vendor provide to enable my usage of the vendor's services to scale at short notice?	The AWS cloud is distributed, highly secure and resilient, giving customers large scaling potential. Customers may scale up or down, paying for only what they use.

Key Area	Questions	AWS RESPONSE
	m. Changing vendor. If I want to move my data to my agency or to a different vendor, or if the vendor suddenly becomes bankrupt or otherwise quits the cloud business, how do I get access to my data in a vendor-neutral format to avoid vendor lock-in? How cooperative will the vendor be? How do I ensure that my data is permanently deleted from the vendor's storage media? For Platform as a Service, which standards does the vendor use that facilitate portability and interoperability to easily move my application to a different vendor or to my agency?	Customers retain control and ownership of their data. Customers can export their AMIs and use them on premise or at another provider (subject to software licensing restrictions). Refer to the AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security. AWS allows customers to move data as needed on and off AWS storage. AWS Import/Export service for S3 accelerates moving large amounts of data into and out of AWS using portable storage devices for transport. AWS allows customers to perform their own backups to tapes using their own tape backup service provider. However, a tape backup is not a service provided by AWS.
Protecting Data from Unauthorized Access by a Third Party	a. Choice of cloud deployment model. Am I considering using a potentially less secure public cloud, a potentially more secure hybrid cloud or community cloud, or a potentially most secure private cloud?	AWS' Compliance and Security teams have established an information security framework and policies based on the Control Objectives for Information and related Technology (COBIT) framework. The AWS security framework integrates the ISO 27002 best practices and the PCI Data Security Standard. Refer to AWS Risk and Compliance Whitepaper for additional details - available at http://aws.amazon.com/security. AWS provides third-party attestations, certifications, Service Organization Controls 1 (SOC 1) Type II report and other relevant compliance reports directly to our customers under NDA. Amazon Virtual Private Cloud (Amazon VPC) lets you provision a logically isolated section of the Amazon Web Services (AWS) Cloud where you can launch AWS resources in a virtual network that you define. You have complete control over your virtual networking environment, including selection of your own IP address range, creation of subnets, and configuration of route tables and network gateways. You can easily customize the network configuration for your Amazon VPC. For example, you can create a public-facing subnet for your webservers that has access to the Internet, and place your backend systems such as databases or application servers in a private-facing subnet with no Internet access. You can leverage multiple layers of security, including security groups and network access control lists, to help control access to Amazon EC2 instances in each subnet. Additionally, you can create a Hardware Virtual Private Network (VPN) connection between your corporate data center and your VPC and leverage the AWS cloud as an extension of your corporate data center

Key Area	Questions	AWS RESPONSE
	b. Sensitivity of my data. Is my data to be stored or processed in the cloud classified, sensitive, private, or data that is publicly available such as information from my public web site? Does the aggregation of my data make it more sensitive than any individual piece of data? For example, the sensitivity may increase if storing a significant amount of data, or storing a variety of data that if compromised would facilitate identity theft. If there is a data compromise, could I demonstrate my due diligence to senior management, government officials and the public?	AWS customers retain control and ownership of their data and may implement a structured data-classification program to meet their requirements.
	c. Legislative obligations. What obligations do I have to protect and manage my data under various legislation, for example the Privacy Act, the Archives Act, as well as other legislation specific to the type of data? Will the vendor contractually accept adhering to these obligations to help me ensure that the obligations are met to the satisfaction of the Australian Government?	AWS customers retain responsibility to ensure their usage of AWS is within compliance of applicable laws and regulations. AWS communicates its security and control environment to customers through industry certifications and third-party attestations, white papers (available at http://aws.amazon.com/security) and providing certifications, reports and other relevant documentation directly to AWS customers. AWS has published a whitepaper on using AWS in the context of Australian privacy considerations, available here.

Key Area	Questions	AWS RESPONSE
	d. Countries with access to my data. In which countries is my data stored, backed up and processed? Which foreign countries does my data transit? In which countries is the failover or redundant data centers? Will the vendor notify me if the answers to these questions change?	AWS customers choose the AWS Region or regions in which their content and servers will be located. This allows customers with geographic specific requirements to establish environments in a location of their choice. AWS customers in Australia can choose to deploy their AWS services exclusively in the Asia Pacific (Sydney) region and store their content onshore in Australia. If the customer makes this choice, their content will be located in Australia unless the customer chooses to move the data. Customers can replicate and back up content in more than one region, but AWS does not move or replicate customer content outside of the customer's chosen region or regions. AWS is vigilant about customers' security and does not disclose or move data in response to a request from the Australian, U.S. or other government unless legally required to do so in order to comply with a legally valid and binding order, such as a subpoena or a court order, or as is otherwise required by applicable law. Non-U.S. governmental or regulatory bodies typically must use recognized international processes, such as Mutual Legal Assistance Treaties with the U.S. government, to obtain valid and binding orders. Additionally, our practice is to notify customers where practicable before disclosing their content so they can seek protection from disclosure, unless we are legally prevented from doing so.

Key Area	Questions	AWS RESPONSE
	e. Data encryption technologies. Are hash algorithms, encryption algorithms and key lengths deemed appropriate by the DSD ISM used to protect my data when it is in transit over a network, and stored on both the vendor's computers and on backup media? The ability to encrypt data while it is being processed by the vendor's computers is still an emerging technology and is an area of current research by industry and academia. Is the encryption deemed strong enough to protect my data for the duration of time that my data is sensitive?	AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS, SimpleDB and EC2. VPC sessions are also encrypted. Amazon S3 also offers Server Side Encryption as an option for customers. Customers may also use third-party encryption technologies. Internally, AWS establishes and manages cryptographic keys for required cryptography employed within the AWS infrastructure. AWS produces, controls and distributes symmetric cryptographic keys using NIST approved key management technology and processes in the AWS information system. An AWS developed secure key and credential manager is used to create, protect and distribute symmetric keys and is used to secure and distribute: AWS credentials needed on hosts, RSA public/private keys and X.509 Certifications. AWS cryptographic processes are reviewed by independent third-party auditors for our continued compliance with SOC, PCI DSS, ISO 27001 and FedRAMP[sm]. The AWS CloudHSM service allows you to protect your encryption keys within HSMs designed and validated to government standards for secure key management. You can securely generate, store, and manage the cryptographic keys used for data encryption such that they are accessible only by you. AWS CloudHSM helps you comply with strict key management requirements without sacrificing application performance. The AWS CloudHSM service works with Amazon Virtual Private Cloud (VPC). CloudHSMs are provisioned inside your VPC with an IP address that you specify, providing simple and private network connectivity to your Amazon Elastic Compute Cloud (EC2) instances. Placing CloudHSMs near your EC2 instances decreases network latency, which can improve application performance. AWS provides dedicated and exclusive access to CloudHSMs, isolated from other AWS customers. Available in multiple Regions and Availability Zones (AZs), AWS CloudHSM allows you to add secure and durable key storage to your Amazon EC2 applications.
	f. Media sanitization. What processes are used to sanitize the storage media storing my data at its end of life, and are the processes deemed appropriate by the DSD ISM?	When a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals. AWS uses the techniques detailed in DoD 5220.22-M ("National Industrial Security Program Operating Manual ") or NIST 800-88 ("Guidelines for Media Sanitization") to destroy data as part of the decommissioning process. If a hardware device is unable to be decommissioned using these procedures, the device will be degaussed or physically destroyed in accordance with industry-standard practices. Refer to AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security.

Key Area	Questions	AWS RESPONSE
	g. Vendor's remote monitoring and management. Does the vendor monitor, administer or manage the computers that store or process my data? If yes, is this performed remotely from foreign countries or from Australia? Can the vendor provide patch compliance reports and other details about the security of workstations used to perform this work, and what controls prevent the vendor's employees from using untrustworthy personally owned laptops?	Moving IT infrastructure to AWS services creates a model of shared responsibility between the customer and AWS. This shared model can help relieve customer's operational burden as AWS operates, manages and controls the components from the host operating system and virtualization layer down to the physical security of the facilities in which the service operates. The customer assumes responsibility and management of the guest operating system (including updates and security patches), other associated application software as well as the configuration of the AWS provided security group firewall.
	h. My monitoring and management. Can I use my existing tools for integrity checking, compliance checking, security monitoring and network management, to obtain visibility of all my systems regardless of whether these systems are located locally or in the cloud? Do I have to learn to use additional tools provided by the vendor? Does the vendor even provide such a mechanism for me to perform monitoring?	AWS Cloudwatch provides monitoring for AWS cloud resources and the applications customers run on AWS. Refer to aws.amazon.com/cloudwatch for additional details. AWS also publishes our most up-to-the-minute information on service availability on the Service Health Dashboard. Refer to status.aws.amazon.com. The AWS Trusted Advisor inspects your AWS environment and makes recommendations when opportunities exist to save money, improve system performance and reliability, or help close security gap.
	i. Data ownership. Do I retain legal ownership of my data, or does it belong to the vendor and may be considered an asset for sale by liquidators if the vendor declares bankruptcy?	AWS customers retain ownership and control of their data. AWS only uses each customer's content to provide the AWS services selected by each customer to that customer and does not use customer content for any secondary purposes. AWS treats all customer content the same and has no insight as to what type of content the customer chooses to store in AWS. AWS simply makes available the compute, storage, database and networking services selected by customer – AWS does not require access to customer content to provide its services.

Key Area	Questions	AWS RESPONSE
	j. Gateway technologies. What technologies does the vendor use to create a secure gateway environment? Examples include firewalls, traffic flow filters, content filters, and antivirus software and data diodes where appropriate.	The AWS network provides significant protection against traditional network security issues and customers can implement further protection. Refer to the AWS Overview of Security whitepaper (available at http://aws.amazon.com/security) for additional details. Amazon assets (e.g. laptops) are configured with anti-virus software that includes e-mail filtering and malware detection. AWS Network Firewall management and Amazon's anti-virus program are reviewed by independent third-party auditors as a part of AWS ongoing compliance with SOC, PCI DSS, ISO 27001 and FedRAMP[sm].
	k. Gateway certification. Is the vendor's gateway environment certified against government security standards and regulations?	AWS obtains certain industry certifications and independent third-party attestations which include the AWS Gateway environment.
	l. Email content filtering. For email Software as a Service, does the vendor provide customizable email content filtering that can enforce my agency's email content policy?	A Customer can utilize a system to host e-mail capabilities, however in that case it is the Customer's responsibility to employ the appropriate levels of spam and malware protection at e-mail entry and exit points and update spam and malware definitions when new releases are made available.

Key Area	Questions	AWS RESPONSE
	m. Policies and processes supporting the vendor's IT security posture. Can I have details of how the vendor's computer and network security posture is supported by policies and processes including threat and risk assessments, ongoing vulnerability management, a change management process that incorporates security, penetration testing, logging and regular log analysis, use of security products endorsed by the Australian Government, and compliance with Australian government security standards and regulations?	Policies and procedures have been established by AWS Information Security based upon the COBIT framework, ISO 27001 standards and the PCI DSS requirements. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard. In addition AWS publishes a SOC 1 Type II report. Refer to the SOC 1 report for further details. The AWS Risk and Compliance whitepaper for additional details - available at http://aws.amazon.com/security. AWS customers are able to identify key controls managed by AWS. Key controls are critical to the customer's control environment and require an external attestation of the operating effectiveness of these key controls in order to comply with compliance requirements—such as the annual financial audit. For this purpose, AWS publishes a wide range of specific IT controls in its Service Organization Controls 1 (SOC 1) Type II report. The SOC 1 report, formerly the Statement on Auditing Standards (SAS) No. 70, Service Organizations report and formerly referred to as the Statement on Standards for Attestation Engagements No. 16 (SSAE 16) report, is a widely recognized auditing standard developed by the American Institute of Certified Public Accountants (AICPA). The SOC 1 audit is an in-depth audit of both the design and operating effectiveness of AWS' defined control objectives and control activities (which include control objectives and control activities over the part of the infrastructure AWS manages). "Type II" refers to the fact that each of the controls described in the report are not only evaluated for adequacy of design, but are also tested for operating effectiveness by the external auditor. Because of the independence and competence of AWS' external auditor, controls identified in the report should provide customers with a high level of confidence in AWS' control environment.
	n. Technologies supporting the vendor's IT security posture. Can I have details of how the vendor's computer and network security posture is supported by direct technical controls including timely application of security patches, regularly updated antivirus software, defense in depth mechanisms to protect against unknown vulnerabilities, hardened operating systems and software applications configured with the strongest possible security settings, intrusion detection and prevention systems,	AWS provides third-party attestations, certifications, Service Organization Controls 1 (SOC 1) Type II report and other relevant compliance reports directly to our customers under NDA. AWS Security regularly scans all Internet facing service endpoint IP addresses for vulnerabilities (these scans do not include customer instances). AWS Security notifies the appropriate parties to remediate any identified vulnerabilities. In addition, external vulnerability threat assessments are performed regularly by independent security firms. Findings and recommendations resulting from these assessments are categorized and delivered to AWS leadership. In addition, the AWS control environment is subject to regular internal and external risk assessments. AWS engages with external certifying bodies and independent auditors to review and test the AWS overall control environment.

Key Area	Questions	AWS RESPONSE
	and data loss prevention mechanisms?	
	o. Auditing the vendor's IT security posture. Can I audit the vendor' implementation of security measures, including performing scans and other penetration testing of the environment provided to me? If there is justifiable reason why auditing is not possible, which reputable third party has performed audits and other vulnerability assessments? What sort of internal audits does the vendor perform, and which compliance standards and other recommended practices from organization's such as the Cloud Security Alliance are used for these assessments? Can I thoroughly review a copy of recent resulting reports?	AWS provides third-party attestations, certifications, Service Organization Controls 1 (SOC 1) Type II report and other relevant compliance reports directly to our customers under NDA. Customers can request permission to conduct scans of their cloud infrastructure as long as they are limited to the customer's instances and do not violate the AWS Acceptable Use Policy. Advance approval for these types of scans can be initiated by submitting a request via the AWS Vulnerability / Penetration Testing Request Form. AWS Security regularly engages independent security firms to perform external vulnerability threat assessments. The AWS SOC 1 Type 2 report provides additional details on the specific control activities executed by AWS.

Key Area	Questions	AWS RESPONSE
	p. User authentication. What identity and access management systems does the vendor support for users to log in to use Software as a Service?	AWS Identity and Access Management (IAM) enables you to securely control access to AWS services and resources for your users. Using IAM, you can create and manage AWS users and groups and use permissions to allow and deny their access to AWS resources. AWS supports identity federation that makes it easier to manage users by maintaining their identities in a single place. AWS IAM includes support for the Security Assertion Markup Language (SAML) 2.0, an open standard used by many identity providers. This new feature enables federated single sign-on, or SSO, empowering users to log into the AWS Management Console or make programmatic calls to AWS APIs, by using assertions from a SAML-compliant identity provider, such as Shibboleth and Windows Active Directory Federation Services.
	q. Centralized control of data. What user training, policies and technical controls prevent my agency's users from using unapproved or insecure computing devices without a trusted operating environment to store or process sensitive data accessed using Software as a Service?	N/A

Key Area	Questions	AWS RESPONSE
	r. Vendor's physical security posture. Does the vendor use physical security products and devices that are endorsed by the Australian Government? How is the vendor's physical data center designed to prevent the tampering or theft of servers, infrastructure and the data stored thereon? Is the vendor's physical data center accredited by an authoritative third party?	The definition of AWS-defined logical and physical controls is documented in the SOC 1 Type II report, and the report is available for review by audit and compliance teams. AWS ISO 27001 and other certifications are also available for auditors to review. Physical security controls include but are not limited to perimeter controls such as fencing, walls, security staff, video surveillance, intrusion detection systems and other electronic means. Physical access is strictly controlled both at the perimeter and at building ingress points and includes, but is not limited to, professional security staff utilizing video surveillance, intrusion detection systems, and other electronic means. Authorized staff must pass two-factor authentication a minimum of two times to access data center floors. Physical access points to server locations are recorded by closed circuit television camera (CCTV) as defined in the AWS Data Center Physical Security Policy. Images are retained for 90 days, unless limited to 30 days by legal or contractual obligations AWS provides data center physical access and information to approved employees and contractors who have a legitimate business need for such privileges. All visitors are required to present identification and are signed in and escorted by authorized staff. See the SOC 1 Type II report for specific controls related to physical access, data center access authorization, and other related controls. Refer to ISO 27001 standard, Annex A, domain 9 for further information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.
	s. Software and hardware procurement. What procurement process is used to ensure that cloud infrastructure software and hardware has been supplied by a legitimate source and has not been maliciously modified in transit?	In alignment with ISO 27001 standards, AWS Hardware assets are assigned an owner, tracked and monitored by the AWS personnel with AWS proprietary inventory management tools. AWS procurement and supply chain team maintain relationships with all AWS suppliers. Refer to ISO 27001 standard, Annex A, domain 7 for additional details. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.

Key Area	Questions	AWS RESPONSE
Protecting Data from Unauthorized Access by the Vendor's Customers	a. Customer segregation. What assurance do I have that the virtualization and "multi-tenancy" mechanisms guarantee adequate logical and network segregation between multiple tenants, so that a malicious customer using the same physical computer as me cannot access my data?	Amazon EC2 currently utilizes a highly customized version of the Xen hypervisor. The hypervisor is regularly assessed for new and existing vulnerabilities and attack vectors by internal and external penetration teams, and is well suited for maintaining strong isolation between guest virtual machines. The AWS Xen hypervisor security is regularly evaluated by independent auditors during assessments and audits. All data stored by AWS on behalf of customers has strong tenant isolation security and control capabilities. Customers retain control and ownership of their data, thus it is their responsibility to choose to encrypt the data. AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS and EC2. VPC sessions are also encrypted. Amazon S3 also offers Server Side Encryption as an option for customers. Refer to AWS Risk and Compliance Whitepaper for additional details - available at http://aws.amazon.com/security.
	b. Weakening my security posture. How would using the vendor's cloud infrastructure weaken my agency's existing network security posture? Would the vendor advertise me as one of their customers without my explicit consent, thereby assisting an adversary that is specifically targeting me?	AWS customers are considered confidential and would not advertise customer details without explicit consent. Amazon Virtual Private Cloud (Amazon VPC) lets you provision a logically isolated section of the Amazon Web Services (AWS) Cloud where you can launch AWS resources in a virtual network that you define. You have complete control over your virtual networking environment, including selection of your own IP address range, creation of subnets, and configuration of route tables and network gateways.
	c. Dedicated servers. Do I have some control over which physical computer runs my virtual machines? Can I pay extra to ensure that no other customer can use the same physical computer as me e.g. dedicated servers or virtual private cloud?	VPC allows customers to launch Amazon EC2 instances that are physically isolated at the host hardware level; they will run on single tenant hardware. A VPC can be created with 'dedicated' tenancy, in which case all instances launched into the VPC will utilize this feature. Alternatively, a VPC may be created with 'default' tenancy, but customers may specify 'dedicated' tenancy for particular instances launched into the VPC.
	d. Media sanitization. When I delete portions of my data, what processes are used to sanitize the storage media before it is made available to another customer, and are the processes deemed appropriate by the DSD ISM?	Customers retain ownership and control of their content and provide customers with the ability to delete their data. When a storage device has reached the end of its useful life, AWS procedures include a decommissioning process that is designed to prevent customer data from being exposed to unauthorized individuals. AWS uses the techniques detailed in DoD 5220.22-M ("National Industrial Security Program Operating Manual ") or NIST 800-88 ("Guidelines for Media Sanitization") to destroy data as part of the decommissioning process. If a hardware device is unable to be decommissioned using these procedures, the device will be degaussed or physically destroyed in accordance with industry-standard practices. Refer to AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security.

Key Area	Questions	AWS RESPONSE
Protecting Data from Unauthorized Access by Rogue Vendor Employees	a. Data encryption key management. Does the vendor know the password or key used to decrypt my data, or do I encrypt and decrypt the data on my computer so the vendor only ever has encrypted data?	AWS Customers manage their own encryption unless they are utilizing AWS server side encryption service. In this case, AWS does create a unique encryption key per tenant. Refer to AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security.
	b. Vetting of vendor's employees. What personnel employment checks and vetting processes does the vendor perform to ensure that employees are trustworthy?	AWS conducts criminal background checks, as permitted by applicable law, as part of pre-employment screening practices for employees commensurate with the employee's position and level of access to AWS facilities.
	c. Auditing vendor's employees. What robust identity and access management system do the vendor's employees use? What auditing process is used to log and review the actions performed by the vendor's employees?	In alignment with ISO 27001 standards, AWS has established formal policies, procedures to delineate the minimum standards for logical access to AWS resources. AWS SOC 1 Type 2 report outlines the controls in place to manage access provisioning to AWS resources. Refer to AWS Overview of Security Processes whitepaper for additional details - available at http://aws.amazon.com/security.
	d. Visitors to data center. Are visitors to data centers escorted at all times, and is the name and other personal details of every visitor verified and recorded?	All visitors and contractors are required to present identification and are signed in and continually escorted by authorized staff. AWS only provides data center access and information to employees and contractors who have a legitimate business need for such privileges. When an employee no longer has a business need for these privileges, his or her access is immediately revoked, even if they continue to be an employee of Amazon or Amazon Web Services. All physical access to data centers by AWS employees is routinely logged and audited.
	e. Physical tampering by vendor's employees. Is network cabling professionally installed to Australian standards or internationally acceptable standards, to help avoid the vendor's employees from accidentally connecting cables to the wrong computers, and to help readily highlight any deliberate attempts by the vendor's employees to tamper with the cabling?	Physical security controls include but are not limited to perimeter controls such as fencing, walls, security staff, video surveillance, intrusion detection systems and other electronic means. This includes appropriate protection for network cables. The AWS SOC 1 Type 2 report provides additional details on the specific control activities executed by AWS. Refer to ISO 27001 standard, Annex A, domain 9 for further information. AWS has been validated and certified by an independent auditor to confirm alignment with ISO 27001 certification standard.

Key Area	Questions	AWS RESPONSE
	f. Vendor's subcontractors. Do the answers to these questions apply equally to all of the vendor's subcontractors?	Provisioning contractor / vendor access is managed the same for both employees and contractors, with responsibility shared across Human Resources (HR), Corporate Operations and Service Owners. Vendors are subject to the same access requirements as employees.
Handling Security Incidents	a. Timely vendor support. Is the vendor readily contactable and responsive to requests for support, and is the maximum acceptable response time captured in the SLA or simply a marketing claim that the vendor will try their best? Is the support provided locally, or from a foreign country, or from several foreign countries using an approach that follows the sun? What mechanism does the vendor use to obtain a real-time understanding of the security posture of my use of the vendor's services so that the vendor can provide support?	AWS Support is a one-on-one, fast-response support channel that is staffed 24x7x365 with experienced and technical support engineers. The service helps customers of all sizes and technical abilities to successfully utilize the products and features provided by Amazon Web Services. All AWS Support tiers offer customers of AWS Infrastructure Services an unlimited number of support cases with pay-by-the-month pricing and no long-term contracts. The four tiers provide developers and businesses the flexibility to choose the support tiers that meet their specific needs.
	b. Vendor's incident response plan. Does the vendor have a security incident response plan that specifies how to detect and respond to security incidents, in a way that is similar to incident handling procedures detailed in the DSD ISM? Can I thoroughly review a copy?	AWS has implemented a formal, documented incident response policy and program. The policy addresses purpose, scope, roles, responsibilities, and management commitment and has been developed in alignment with the ISO 27001 and NIST 800-53 standards. Below is an outline of the three-phased approach AWS has implemented to manage incidents: 1. Activation and Notification Phase: Incidents for AWS begin with the detection of an event. This can come from several sources including: - Metrics and alarms - AWS maintains an exceptional situational awareness capability, most issues are rapidly detected from 24x7x365 monitoring and alarming of real time metrics and service dashboards. The majority of incidents are detected in this manner. AWS utilizes early indicator alarms to proactively identify issues that may ultimately impact Customers. - Trouble ticket entered by an AWS employee - Calls to the 24X7X365 technical support hotline. If the event meets incident criteria, then the relevant on-call support engineer will start an engagement utilizing AWS Event Management Tool system to page relevant program resolvers (e.g. Security team). The resolvers will perform an analysis of the incident to determine if additional resolvers should be engaged and to determine the approximate root cause. 2. Recovery Phase - the relevant resolvers will perform break fix to address the incident. Once troubleshooting, break fix and affected components are addressed, the call leader will assign next steps in terms of follow -up documentation and follow- up actions and end the call engagement.

		3. Reconstitution Phase - Once the relevant fix activities are complete the call leader will declare that the recovery phase is complete. Post mortem and deep root cause analysis of the incident will be assigned to the relevant team. The results of the post mortem will be reviewed by relevant senior management and relevant actions such as design changes etc. will be captured in a Correction of Errors (COE) document and tracked to completion. In addition to the internal communication mechanisms detailed above, AWS has also implemented various methods of external communication to support its customer base and community. Mechanisms are in place to allow the customer support team to be notified of operational issues that impact the customer experience. A "Service Health Dashboard" is available and maintained by the customer support team to alert customers to any issues that may be of broad impact. The AWS incident management program is reviewed by independent external auditors during audits for our SOC, PCI DSS, ISO 27001 and FedRAMP compliance. **The AWS Cloud Security Whitepaper** available at http://aws.amazon.com/security provides additional details.
	c. Training of vendor's employees. What qualifications, certifications and regular information security awareness training do the vendor's employees require, to know how to use the vendor's systems in a secure manner and to identify potential security incidents?	In alignment with ISO 27001 standard, all AWS employees complete periodic Information Security training which requires an acknowledgement to complete. Compliance audits are periodically performed to validate that employees understand and follow the established policies. Refer to AWS Overview of Security Processes Whitepaper for additional details - available at http://aws.amazon.com/security.

Key Area	Questions	AWS RESPONSE
	d. Notification of security incidents. Will the vendor notify me via secure communications of security incidents that are more serious than an agreed threshold, especially in cases where the vendor might be liable? Will the vendor automatically notify law enforcement or other authorities, who may confiscate computing equipment used to store or process my data?	Notification of security incidents are handled on a case-by-case basis and as required by applicable law. Any notification is performed via secure communications.
	e. Extent of vendor support. How much assistance will the vendor provide me with investigations if there is a security breach such as an unauthorized disclosure of my data, or if there is a need to perform legal electronic discovery of evidence?	AWS provides infrastructure and customers manage everything else, including the operating system, the network configuration and the installed applications. Customers are responsible for responding appropriately to legal procedures involving the identification, collection, processing, analysis and production of electronic documents they store or process using AWS. Upon request, AWS may work with customers who require AWS' assistance in legal proceedings.
	f. My access to logs. How do I obtain access to time synchronized audit logs and other logs to perform a forensic investigation, and how are the logs created and stored to be suitable evidence for a court of law?	Customers retain control of their own guest operating systems, software and applications and are responsible for developing logical monitoring of the conditions of these systems. In alignment with ISO 27001 standards, AWS information systems utilize internal system clocks synchronized via NTP (Network Time Protocol). AWS CloudTrail provides a simple solution to log user activity that helps alleviate the burden of running a complex logging system. Refer to aws.amazon.com/cloudtrail for additional details. AWS Cloudwatch provides monitoring for AWS cloud resources and the applications customers run on AWS. Refer to aws.amazon.com/cloudwatch for additional details. AWS also publishes our most up-to-the-minute information on service availability on the Service Health Dashboard. Refer to status.aws.amazon.com.
	g. Security incident compensation. How will the vendor adequately compensate me if the vendor's actions, faulty software or hardware contributed to a security breach?	AWS' incident response program, plans and procedures have been developed in alignment with ISO 27001 standard. The AWS SOC 1 Type 2 report provides details on the specific control activities executed by AWS. The AWS Overview of Security Processes whitepaper (available at http://aws.amazon.com/security) provides additional details.

Key Area	Questions	AWS RESPONSE
	h. Data spills. If data that I consider is too sensitive to be stored in the cloud is accidentally placed into the cloud, referred to as a data spill, how can the spilled data be deleted using forensic sanitization techniques? Is the relevant portion of physical storage media zeroed whenever data is deleted? If not, how long does it take for deleted data to be overwritten by customers as part of normal operation, noting that clouds typically have significant spare unused storage capacity? Can the spilled data be forensically deleted from the vendor's backup media? Where else is the spilled data stored, and can it be forensically deleted?	Customers retain ownership and control of their content. All data stored by AWS on behalf of customers has strong tenant isolation security and control capabilities. AWS allows customers to use their own encryption mechanisms for nearly all the services, including S3, EBS and EC2. IPSec tunnels to VPC are also encrypted. Amazon S3 also offers Server Side Encryption as an option for customers. Refer to AWS Risk and Compliance Whitepaper for additional details - available at http://aws.amazon.com/security. Refer to AWS Risk and Compliance Whitepaper for additional details - available at http://aws.amazon.com/security.

Appendix C: Glossary of Terms

Authentication: Authentication is the process of determining whether someone or something is, in fact, who or what it is declared to be.

Availability Zone: Amazon EC2 locations are composed of regions and Availability Zones. Availability Zones are distinct locations that are engineered to be insulated from failures in other Availability Zones and provide inexpensive, low latency network connectivity to other Availability Zones in the same region.

DSS: The Payment Card Industry Data Security Standard (DSS) is a worldwide information security standard assembled and managed by the Payment Card Industry Security Standards Council.

EBS: Amazon Elastic Block Store (EBS) provides block level storage volumes for use with Amazon EC2 instances. Amazon EBS volumes are off-instance storage that persists independently from the life of an instance.

FedRAMP[sm]: The Federal Risk and Authorization Management Program (FedRAMP[sm]) is a government-wide program that provides a standardized approach to security assessment, authorization, and continuous monitoring for cloud products and services. FedRAMP[sm] is mandatory for Federal Agency cloud deployments and service models at the low and moderate risk impact levels.

FISMA: The Federal Information Security Management Act of 2002. The act requires each federal agency to develop, document, and implement an agency-wide program to provide information security for the information and information systems that support the operations and assets of the agency, including those provided or managed by another agency, contractor, or other source.

FIPS 140-2: The Federal Information Processing Standard (FIPS) Publication 140-2 is a US government security standard that specifies the security requirements for cryptographic modules protecting sensitive information.

GLBA: The Gramm–Leach–Bliley Act (GLB or GLBA), also known as the Financial Services Modernization Act of 1999, sets forth requirements for financial institutions with regard to, among other things, the disclosure of nonpublic customer information and the protection of threats in security and data integrity.

HIPAA: The Health Insurance Portability and Accountability Act (HIPAA) of 1996 requires the establishment of national standards for electronic health care transactions and national identifiers for providers, health insurance plans, and employers. The Administration Simplification provisions also address the security and privacy of health data. The standards are meant to improve the efficiency and effectiveness of the nation's health care system by encouraging the widespread use of electronic data interchange in the U.S. health care system.

Hypervisor: A hypervisor, also called Virtual Machine Monitor (VMM), is software/hardware platform virtualization software that allows multiple operating systems to run on a host computer concurrently.

IAM: AWS Identity and Access Management (IAM) enables a customer to create multiple Users and manage the permissions for each of these Users within their AWS Account.

ITAR: International Traffic in Arms Regulations (ITAR) is a set of United States government regulations that control the export and import of defense-related articles and services on the United States Munitions List (USML). Government agencies and contractors must comply with ITAR and restrict access to protected data.

ISAE 3402: The International Standards for Assurance Engagements No. 3402 (ISAE 3402) is the international standard on assurance engagements. It was put forth by the International Auditing and Assurance Standards Board (IAASB), a standard-setting board within the International Federation of Accountants (IFAC). ISAE 3402 is now the new globally recognized standard for assurance reporting on service organizations.

ISO 9001: AWS' ISO 9001 certification directly supports customers who develop, migrate and operate their quality-controlled IT systems in the AWS cloud. Customers can leverage AWS' compliance reports as evidence for their own ISO 9001 programs and industry-specific quality programs, such as GxP in life sciences, ISO 13485 in medical devices, AS9100 in aerospace, and ISO/TS 16949 in automotive. AWS customers who don't have quality system requirements will still benefit from the additional assurance and transparency that an ISO 9001 certification provides.

ISO 27001: ISO/IEC 27001 is an Information Security Management System (ISMS) standard published by the International Organization for Standardization (ISO) and the International Electrotechnical Commission (IEC). ISO 27001 formally specifies a management system that is intended to bring information security under explicit management control. Being a formal specification means that it mandates specific requirements. Organizations that claim to have adopted ISO/IEC 27001 can therefore be audited and certified compliant with the standard.

NIST: National Institute of Standards and Technology. This agency sets detailed security standards as needed by industry or government programs. Compliance with FISMA requires agencies to adhere to NIST standards.

Object: The fundamental entities stored in Amazon S3. Objects consist of object data and metadata. The data portion is opaque to Amazon S3. The metadata is a set of name-value pairs that describe the object. These include some default metadata such as the date last modified and standard HTTP metadata such as Content-Type. The developer can also specify custom metadata at the time the Object is stored.

PCI: Refers to the Payment Card Industry Security Standards Council, an independent council originally formed by American Express, Discover Financial Services, JCB, MasterCard Worldwide and Visa International, with the goal of managing the ongoing evolution of the Payment Card Industry Data Security Standard.

QSA: The Payment Card Industry (PCI) Qualified Security Assessor (QSA) designation is conferred by the PCI Security Standards Council to those individuals that meet specific qualification requirements and are authorized to perform PCI compliance assessments.

SAS 70: Statement on Auditing Standards No. 70: Service Organizations is an auditing statement issued by the Auditing Standards Board of the American Institute of Certified Public Accountants (AICPA). SAS 70 provides guidance to service auditors when assessing the internal controls of a service organization (such as AWS) and issuing a service auditor's report. SAS 70 also provides guidance to auditors of financial statements of an entity that uses one or more service organizations. The SAS 70 report has been replaced by the Service Organization Controls 1 report.

Service: Software or computing ability provided across a network (e.g., EC2, S3, VPC, etc.).

Service Level Agreement (SLA): A service level agreement is a part of a service contract where the level of service is formally defined. The SLA is used to refer to the contracted delivery time (of the service) or performance.

SOC 1: Service Organization Controls 1 (SOC 1) Type II report, formerly the Statement on Auditing Standards (SAS) No. 70, Service Organizations report (formerly referred to as the SSAE 16 report), is a widely recognized auditing standard developed by the American Institute of Certified Public Accountants (AICPA). The

international standard is referenced as the International Standards for Assurance Engagements No. 3402 (ISAE 3402).

SSAE 16 [deprecated]: The Statement on Standards for Attestation Engagements No. 16 (SSAE 16) is an attestation standard published by the Auditing Standards Board (ASB) of the American Institute of Certified Public Accountants (AICPA). The standard addresses engagements undertaken by a service auditor for reporting on controls at organizations that provide services to user entities, for which a service organization's controls are likely to be relevant to a user entities internal control over financial reporting (ICFR). SSAE 16 effectively replaces Statement on Auditing Standards No. 70 (SAS 70) for service auditor's reporting periods ending on or after June 15, 2011.

SOC 2: Service Organization Controls 2 (SOC 2) reports are intended to meet the needs of a broad range of users that need to understand internal control at a service organization as it relates to security, availability, processing integrity, confidentiality and privacy. These reports are performed using the AICPA Guide: Reporting on Controls at a Service Organizations Relevant to Security, Availability, Processing Integrity, Confidentiality, or Privacy and are intended for use by stakeholders (e.g., customers, regulators, business partners, suppliers, directors) of the service organization that have a thorough understanding of the service organization and its internal controls.

SOC 3: Service Organization Controls 3 (SOC 3) reports are designed to meet the needs of uses who want assurance on the controls at a service organization related to security, availability, processing integrity, confidentiality, or privacy but do not have the need for or the knowledge necessary to make effective use of a SOC 2 Report. These reports are prepared using the AICPA/Canadian Institute of Chartered Accountants (CICA) Trust Services Principles, Criteria, and Illustrations for Security, Availability, Processing Integrity, Confidentiality, and Privacy. Because they are general use reports, SOC 3 Reports can be freely distributed or posted on a website as a seal.

Virtual Instance: Once an AMI has been launched, the resulting running system is referred to as an instance. All instances based on the same AMI start out identical and any information on them is lost when the instances are terminated or fail.

Version History

January 2016
- Added GxP Compliance Program
- Twelfth region added (Asia Pacific - Seoul)

December 2015
- Updates to certifications and third-party attestations summaries
- Added ISO 27017 certification
- Added ISO 27018 certification
- Eleventh region added (China - Beijing)

November 2015
- Update to CSA v3.0.1

August 2015
- Updates to in-scope services for PCI 3.1
- Updates to regions in-scope for PCI 3.1

May 2015
- Tenth region added (EU - Frankfurt)
- Updates to in-scope services for SOC 3
- SSAE 16 language deprecated

Apr 2015
- Updates to in-scope services for: FedRAMP[sm], HIPAA, SOC 1, ISO 27001, ISO 9001

Feb 2015
- Updates to FIPS 140-2 VPN endpoints and SSL-terminating load balancers
- Updates to PCI DSS verbiage

Dec 2014
- Updates to certifications and third-party attestations summaries

Nov 2013 version
- Edits to IPsec tunnel encryption verbiage

Jun 2013 version
- Updates to certifications and third-party attestations summaries
- Updates to Appendix C: Glossary of Terms
- Minor changes to formatting

Jan 2013 version
- Edits to certifications and third-party attestations summaries

Nov 2012 version
- Edits to content and updated certification scope
- Added reference to the SOC 2 and MPAA

Jul 2012 version
- Edits to content and updated certification scope
- Addition of the CSA Consensus Assessments Initiative Questionnaire (Appendix A)

Jan 2012 version
- Minor edits to content based on updated certification scope

- Minor grammatical edits

Dec 2011 version

- Change to Certifications and Third-party Attestation section to reflect SOC 1/SSAE 16, FISMA Moderate, International Traffic in Arms Regulations, and FIPS 140-2
- Addition of S3 Server Side Encryption
- Added additional cloud computing issue topics

May 2011 version

- Initial release

Notices

Certificate

Certificate number: 2013- 009
Certified by EY CertifyPoint since:
November 18, 2010

Based on certification examination in conformity with defined requirements in ISO/IEC17021:2011 and ISO/IEC 27006:2011, the Information Security Management System as defined and implemented by

Amazon Web Services, Inc.*

headquartered in Seattle, Washington, United States of America, is compliant with the requirements as stated in the standard:

ISO/IEC 27001:2013

Issue date of certificate: November 11, 2013
Re-issue date of certificate: December 4, 2015
Expiration date of certificate: November 12, 2016

EY CertifyPoint will, according to the certification agreement (dated October 23, 2014), perform surveillance audits and acknowledges the certificate until the expiration date of the certificate.

**This certificate is applicable for the assets, services and locations as described in the scoping section on the back of this certificate, with regard to the specific requirements for information security as stated in Statement of Applicability, approved on October 22, 2015.*

Amazon Web Services, Inc.

Annex to certificate 2013- 009

The scope of this ISO 27001:2013 Certification is bounded by specified services of Amazon Web Services, Inc. and specified facilities. The ISMS is centrally managed out Amazon Web Services, Inc. headquarters in Seattle, Washington, United States of America.

The in-scope applications, systems, people, and processes are globally implemented and operated by teams out of an explicit set of facilities that comprise Amazon Web Services, Inc. and are specifically defined in the scope and bounds.

The Amazon Web Services, Inc. ISMS scope includes the following services:

- AWS CloudFormation
- Amazon CloudFront
- AWS CloudHSM
- AWS CloudTrail
- AWS Direct Connect
- AWS Directory Service
- Amazon DynamoDB
- Amazon EC2 Container Service (ECS)
- Amazon Elastic Beanstalk
- Amazon Elastic Block Store (EBS)
- Amazon Elastic Compute Cloud (EC2)
- Amazon Elastic File System (EFS)
- Elastic Load Balancing (ELB)
- Amazon Elastic MapReduce (EMR)
- Amazon ElastiCache
- Amazon Glacier
- AWS Identity & Access Management (IAM)
- AWS Key Management Service (KMS)
- Amazon Redshift
- Amazon Relational Database Service (RDS)
- Amazon Route 53
- Amazon Simple Email Service (SES)
- Amazon Simple Queue Service (SQS)
- Amazon Simple Storage Service (S3)
- Amazon Simple Workflow Service (SWF)
- Amazon SimpleDB
- AWS Storage Gateway
- Amazon Virtual Private Cloud (VPC)
- VM Import/Export
- AWS WAF (Web Application Firewall)
- Amazon WorkDocs
- Amazon WorkMail
- Amazon WorkSpaces

This Annex (edition: December 4, 2015) is only valid in connection with certificate 2013-009.

Amazon Web Services, Inc.

Annex to certificate 2013- 009

Locations in scope:

- AWS Corporate Headquarters: Seattle, Washington
- Data center locations which house hardware used to deliver the services (including the Amazon GovCloud (US) region):

  - Melbourne, Australia
  - Sydney, Australia
  - Rio de Janeiro, Brazil
  - São Paulo, Brazil
  - Marseille, France
  - Paris, France
  - Frankfurt, Germany
  - Hong Kong
  - Chennai, India
  - Mumbai, India
  - Dublin, Ireland
  - Milan, Italy
  - Osaka, Japan
  - Tokyo, Japan
  - Amsterdam, Netherlands
  - Warsaw, Poland
  - Manila, Philippines
  - Singapore
  - Seoul, South Korea
  - Madrid, Spain
  - Stockholm, Sweden
  - Taipei, Taiwan
  - London, United Kingdom
  - California, United States
  - Florida, United States
  - Georgia, United States
  - Indiana, United States
  - Missouri, United States
  - New Jersey, United States
  - New York, United States
  - Oregon, United States
  - Texas, United States
  - Virginia , United States
  - Washington, United States

The ISMS mentioned in the above scope is restricted as defined in the ISMS Scope Statement, version 2015.01 approved on November 4th, 2015 by the Director of Risk & Compliance for Amazon Web Services, Inc.

This Annex (edition: December 4, 2015) is only valid in connection with certificate 2013-009.

BOBBY NAKANELUA

PROFESSIONAL EXPERIENCE

Strategic Communications **September 2015 – Present**
Cloud Engineer/Architect

Primary responsibility for leading the cloud technology team in support of the existing customer base and serving as a high level technical resource advising new customers on the company's cloud portfolio.

- Responsible for engineering/architecture of new customer solutions including data analysis and making recommendations to improve customer network performance
- Design, manage, build, configure, administer, operate and maintain cloud platforms (including AWS, MS Azure, and VMWare solutions)
- Develop and maintain scripts to automate deployment and other tasks, scripting and maintaining build environments
- Secure operating systems against compromise; develop test and maintain system recovery plans; Ensure systems and DB administration services are immediately available
- Define enterprise Continuous Integration/Deployment processes and best practices

HP/Cohn's & Associates **January 2012 – September 2015**
Enterprise Architect & Service Delivery Manager

- Lead Enterprise Architect responsible for the IT strategy of a 100MM infrastructure supporting 160+ human resource applications across 3 data centers supporting 1.5 million members of the US Army.
- Responsible for the growth and management of the contractor workforce that provides support for Division Operations, Enterprise Management Systems, Enterprise Architecture, Mainframe Operations and the Network Operations Center.
- Service Delivery manager overseeing project management team with up to 20 - 25 simultaneous projects for enterprise tool upgrade/implementation, data center upgrades, hosting and COOP.
- Works closely with Government and Contractor counterparts to coordinate activities at the Directorate, Division and Branch levels to ensure tasks and efforts are identified, staffed, tracked and coordinated.
- Shapes the strategic direction through technical consultation with key Leadership, capacity planning, policy development, engineering design, documentation and analysis in support of system architecture, continuity of operations and security.
- Develops strategy and models for IT initiatives such as data center hosting, core data center migration and energy efficiency.

Walkabout Media **January 2011 – October 2012**
Co-Founder

- Co-Founder of a media company that specialized in the design and deployment of mobile touring and touch screen applications.
- Responsible for new business development, including client acquisition, business model development and marketing.

BOBBY NAKANELUA

Archer Systems **March 2009 – December 2011**
Vice President, Federal IT Division

Other positions: Systems Architect / Project Manager (Sept 2009 – Jan 2010), Systems Designer (Mar 2009 – Sept 2009)

- Worked closely with key government partners to identify problems and architect, develop and implement modern and sustainable IT solutions.
- Managed a diverse and remote workforce of sub-contractors and in-house personnel.
- Architect and developer of the GSA Enhanced Checkout System (GECO), Architect of the GSA Web Shopping Project and program manager for the GSA Vendor Supplier Network.
- Developed proof of concept for self-service IaaS and email. Utilized VMWare and Google services in a hybrid cloud model.

US Calvary **May 2005 – September 2009**
Director of E-Commerce

- Responsible for the development and online marketing of uscav.com, an industry leading website with revenues that could place it in the Internet Retailer Top 500.

*Charges for your current billing period shown on these reports are estimated charges. Estimated charges shown on this page, or shown on any notifications that we send to you, may differ from your actual charges for this statement period. This is because estimated charges presented on this page do not include usage charges accrued during this statement period after the date you view this page. One-time fees and subscription charges are assessed separately from usage and reoccurring charges, on the date that they occur.

LABOR CATEGORIES AND DESCRIPTIONS (Full Details Per Position)
The Government's minimum requirements for each labor category are identified in the paragraphs below. Labor categories have been harmonized with the Office of Management and Budget's (OMB) Standard Occupational Classification (SOC) for which the Bureau of Labor Statistics (BLS) maintains compensation data. Labor categories are further defined as Associate, Intermediate, and Senior based on years of experience, education, and duties/responsibilities as follows:

- **SENIOR**: A Senior employee has over 10 years of experience and an MA/MS degree. A Senior employee typically works on high-visibility or mission critical aspects of a given program and performs all functional duties independently. A Senior employee may oversee the efforts of less senior staff and/or be responsible for the efforts of all staff assigned to a specific job.

- **INTERMEDIATE**: An Intermediate employee has 5-8 years of experience and a BA/BS or MA/MS degree. An Intermediate employee typically performs all functional duties independently.

- **ASSOCIATE**: An Associate employee has 2-5 years of experience and a BA/BS degree. An Associate employee is responsible for assisting more senior positions and/or performing functional duties under the oversight of more senior positions.

SUBJECT MATTER EXPERT (SME)/FUNCTIONAL AREA EXPERT (FAE): An SME/FAE is an individual whose qualifications and/or particular expertise are exceptional and/or highly unique. SMEs/FAEs do not have specific experience/education qualifications, but are typically identified as recognized industry leaders for a given area of expertise. SMEs/FAEs typically perform the following kinds of functions: Initiates, supervises, and/or develops requirements from a project's inception to conclusion for complex to extremely complex programs; Provides strategic advice, technical guidance, and expertise to program and project staff; Provides detailed analysis, evaluation and recommendations for improvements, optimization development, and/or maintenance efforts for client-specific or mission critical challenges/issues; Consults with client to define need or problem supervises studies and leads surveys to collect and analyze data to provide advice and recommend solutions.

Program Manager – Senior (Project Management Institute (PMI) certification required)
Description: Under indirect supervision, oversees the operational planning, establishment, execution, and evaluation of a multifaceted program/project typically consisting of a set of closely related subprograms or associated activities. Oversees fiscal, operational, administrative, and human resources management of the program; seeks and develops outside funding sources, serves as principal point of representation and liaison with external constituencies on operational matters, and provides day-to-day technical/professional guidance and leadership as appropriate to the area of expertise.

Program Manager – Intermediate (PMI certification desired)
Description: Under general direction, oversees the operational planning, establishment,

execution, and evaluation of a multifaceted program/project typically consisting of a set of closely related subprograms or associated activities. Oversees fiscal, operational, administrative, and human resources management of the program; seeks and develops outside funding sources, serves as principal point of representation and liaison with external constituencies on operational matters, and provides day-to-day technical/professional guidance and leadership as appropriate to the area of expertise.

Program Manager – Associate

Description: Under immediate supervision, oversees the operational planning, establishment, execution, and evaluation of a multifaceted program/project typically consisting of a set of closely related subprograms or associated activities. Oversees fiscal, operational, administrative, and human resources management of the program; seeks and develops outside funding sources, serves as principal point of representation and liaison with external constituencies on operational matters, and provides day-to-day technical/professional guidance and leadership as appropriate to the area of expertise.

Project Manager – Senior (PMI certification required)

Description: Responsible for all aspects of the development and implementation of assigned projects and provides a single point of contact for those projects. Takes projects from original concept through final implementation. Interfaces with all areas affected by the project including end users, computer services, and client services. Defines project scope and objectives. Develops detailed work plans, schedules, project estimates, resource plans, and status reports. Conducts project meetings and is responsible for project tracking and analysis. Ensures adherence to quality standards and reviews project deliverables. Manages the integration of vendor tasks and tracks and reviews vendor deliverables. Provides technical and analytical guidance to project team. Recommends and takes action to direct the analysis and solutions of problems.

Project Manager – Intermediate (PMI certification desired)

Description: Under general direction, responsible for all aspects of the development and implementation of assigned projects and provides a single point of contact for those projects. Takes projects from original concept through final implementation. Interfaces with all areas affected by the project including end users, computer services, and client services. Defines project scope and objectives. Develops detailed work plans, schedules, project estimates, resource plans, and status reports. Conducts project meetings and is responsible for project tracking and analysis. Ensures adherence to quality standards and reviews project deliverables. Manages the integration of vendor tasks and tracks and reviews vendor deliverables. Provides technical and analytical guidance to project team. Recommends and takes action to direct the analysis and solutions of problems.

Project Manager - Associate

Description: Under direct supervision, responsible for assigned aspects of the development and implementation of assigned projects and provides a single point of contact for those aspects. Interfaces with all areas affected by the project including end users, computer services, and client services. Ensures adherence to quality standards and reviews project deliverables. Manages the integration of vendor tasks and tracks and reviews vendor deliverables. Recommends action to direct the analysis and solutions of problems.

Enterprise Architect
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Under general direction, has duties of instructing, directing, and checking the work of other project engineers. Responsible for developing strategies for technical IT infrastructures and the completion of assigned engineering projects within budgetary and scheduling guidelines. Leads a group of engineers, analysts, and/or technicians assigned for the duration of a project or may function as ongoing lead within a group of engineers associated with one or more technical areas within the telecom function (such as, but not limited to, network design, engineering, implementation, or operations/user support). Does not have formal supervisory responsibilities, although may provide input for (project) team member performance appraisals.

Business Analyst – Functional

Experience/Education: Minimum of 5 years of experience and BA/BS degree
Description: Under general supervision, has duties of instructing, directing, and checking the work of other project engineers. Responsible for the completion of assigned engineering projects within budgetary and scheduling guidelines. Leads a group of engineers, analysts, and/or technicians assigned for the duration of a project or may function as ongoing lead within a group of engineers associated with one or more technical areas within the telecom function (such as, but not limited to, network design, engineering, implementation, or operations/user support). Does not have formal supervisory responsibilities, although may provide input for (project) team member performance appraisals.

Business Analyst – Technical

Experience/Education: Minimum of 2 years of experience and BS degree
Description: Under direct supervision, has duties of instructing, directing, and checking the work of other project engineers. Reviews design documents and ensures technical specifications and designs are correct. Responsible for the completion of assigned engineering projects within budgetary and scheduling guidelines. Leads a group of engineers, analysts, and/or technicians assigned for the duration of a project or may function as ongoing lead within a group of engineers associated with one or more technical areas within the telecom function (such as, but not limited to, network design, engineering, implementation, or operations/user support). Does not have formal supervisory responsibilities, although may provide input for (project) team member performance appraisals.

Project Administrator

Experience/Education: Minimum of 5 years of experience and BA/BS degree
Description: Under general direction, interpret and compose complex correspondences and presentations to include charts and diagrams directly supporting the DoD Enterprise infrastructure and infostructure IT goals and projects. Accountable for financial budgeting and tracking project KPI's and goals. Apply effective networking skills to carry out job responsibilities. Gather pertinent information from a variety of sources to perform duties. Resolve administrative issues/problems that arise and recommend process improvements. Ensure timely completion of multiple, simultaneous, independent events and projects of moderate complexity. Coordinate multiple work projects and other responsibilities (i.e. Training/status reporting, etc.). Some duties may be considered special assignments particular to either the department or manager. Prepare reports and correspondence from information gathered to support the entire effort. Interprets and applies standard policies and procedures to respond to complex inquiries, to resolve issues.

Project Administrator - Associate

Description: Under immediate supervision, interpret and compose complex correspondences and presentations to include charts and diagrams directly supporting the DoD Enterprise infrastructure and infostructure IT goals and projects. Apply effective networking skills to carry out job responsibilities. Gather pertinent information from a variety of sources to perform duties. Resolve administrative issues/problems that arise and recommend process improvements. Ensure timely completion of multiple, simultaneous, independent events and projects of moderate complexity. Coordinate multiple work projects and other responsibilities (i.e.

Training/status reporting, etc.). Some duties may be considered special assignments particular to either the department or manager. Prepare reports and correspondence from information gathered to support the entire effort. Interprets and applies standard policies and procedures to respond to complex inquiries, to resolve issues.

Facility Staff Support – Senior
Description: Under indirect supervision, assists in developing & monitoring assigned department budget and risk management efforts directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Can include tasks associated with receiving, distributing, or shipping of materials. Must possess strategic planning skills and have a thorough understanding of internal & external compliance policies. Accurately completes paperwork or system transactions applicable to function, such as documentation of material movement (i.e., Receipt, Shop Order, and Packing Lists). Ability to organize, plan & schedule work with minimal supervision.

Facility Staff Support – Intermediate
Description: Under general direction, assists in developing & monitoring assigned department budget and risk management efforts directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Can include tasks associated with receiving, distributing, or shipping of materials. Must possess strategic planning skills and have a thorough understanding of internal & external compliance policies. Accurately completes paperwork or system transactions applicable to function, such as documentation of material movement (i.e., Receipt, Shop Order, and Packing Lists). Ability to organize, plan & schedule work with minimal supervision.

Facility Staff Support – Associate
Description: Under immediate supervision, assists in developing & monitoring assigned department budget and risk management efforts directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Can include tasks associated with receiving, distributing, or shipping of materials. Must possess strategic planning skills and have a thorough understanding of internal & external compliance policies. Accurately completes paperwork or system transactions applicable to function, such as documentation of material movement (i.e., Receipt, Shop Order, and Packing Lists). Ability to organize, plan & schedule work with minimal supervision.

Quality Assurance Manager – Senior (Lean Six Sigma Black Belt Certification Required)
Description: Under general direction, carries out procedures to ensure that all information systems products and services meet organization standards and end-user requirements. Performs and leads tests of software to ensure proper operation and freedom from defects. May create test data for applications. Documents and works to resolve all complex problems. Reports progress on problem resolution to management. Devises improvements to current procedures and develops models of possible future configurations. Acts as information resource about assigned areas to technical writers and other Quality Assurance Analysts. Performs complex workflow analysis and recommends quality improvements.

Quality Assurance Analyst – Intermediate (Lean Six Sigma Green Belt Certification Required)
Description: Under general supervision, carries out procedures to ensure that all information systems products and services meet minimum organization standards and end-user requirements. Thoroughly tests software to ensure proper operation and freedom from defects. Documents and works to resolve all problems. Reports progress on problem resolution to management. Devises improvements to current procedures and develops models of possible future configurations. Performs workflow analysis and recommends quality improvements.

Quality Assurance Analyst – Associate
Description: Under direct supervision, carries out procedures to ensure that all information systems products and services meet organization standards and end-user requirements. Assists in the testing of software to ensure proper operation and freedom from defects. Documents and works to resolve basic problems. Reports progress on problem resolution to management. This position is staffed by beginners who have had sufficient educational background and/or experience to qualify them to start in quality assurance analysis.

Chief Enterprise Architect
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Leads and directs large teams with diverse functional and technical disciplines to include enterprise architects, systems engineers, business analysts, and network engineers. Works directly with senior executives of the enterprise to consult, coach, and advise on strategy,

business alignment, enterprise architecture, information technology solutions, and the associated impact on the organization and its stakeholders. Coordinates resolution of highly complex problems and tasks, selling new ideas and concepts in support of operational goals and objectives. Provides technical and analytical guidance to enterprise architecture team. Integrates and translates complex concepts into tactical action plans. Directs high-level enterprise architecture analysis, evaluation, design, integration, documentation, and development. Has a deep understanding of DoD business transformation and processes, DoD organizational structure, experience in developing briefings and responses to GAO, OMB, and executives within the department, and coordinated and developed Business Enterprise Architecture (BEA) Compliance Guidance criteria and various BEA evolution strategies. Possesses extensive knowledge of the DoDAF, the DoD Net-Centric and Data Strategies, the DoD Information Assurance Guidance, and the DoD Federation Strategy, and has had hands-on experience with the BEA and Enterprise Transition Plan, Service Oriented Architecture, and the Business Mission Area Federation Strategy and Roadmap.

Lead Enterprise Architect
Experience/Education: Minimum of 5 years of experience and a BA/BS or MA/MS degree
Description: Responsible for all aspects of the development and maintenance of assigned enterprise architecture project and takes project from planning through final delivery. Interfaces with all areas affected by the project including end users, computer services, and client services. Defines project scope and objectives and develops detailed work plans, schedules, project estimates, resource plans, and status reports. Conducts project meetings and is responsible for project tracking and analysis. Leads a group of engineers, architects, and analysts and ensures adherence to quality standards and reviews enterprise architecture deliverables. Provides technical and analytical guidance to enterprise architecture team. Directs and participates in high-level enterprise architecture analysis, evaluation, design, integration, documentation, and development. Applies high-level business and technical principles and methods to very difficult technical problems to arrive at creative engineering solutions. Recommends and takes action to direct the analysis and solutions of problems. Has a deep understanding of DoD business transformation and processes, DoD organizational structure, and experience in developing briefings and responses to GAO, OMB, and executives within the department. Possesses extensive knowledge of and hands-on experience with the DoDAF, the Business Enterprise Architecture and Enterprise Transition Plan, Service Oriented Architecture, and the Business Mission Area Federation Strategy and Roadmap. Lead the development of the BEA and updates to the BEA Development Methodology and Architecture Planning Guide. Familiar with the Core Business Mission and Business Enterprise Priority architecture liaisons.

Senior IT Systems Solution Architect
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Participates in the design, creation, and maintenance of computerized databases. Responsible for the quality control and auditing of Telelogic System Architect (SA) databases to ensure accurate and appropriate use of data. Consults with and advises users on access, works directly with users to resolve data conflicts and inappropriate data usage, and directs the maintenance and use of the enterprise architecture encyclopedia. Consults with SA programming personnel to resolve system performance issues. Responsible for the installation, maintenance, configuration, and integrity of SA. Implements application enhancements that will

improve the reliability and performance of the application. Works with network engineers to schedule installations and upgrades and maintains them in accordance with established IT policies and procedures. Responsible for file maintenance, control, and product support and facilitates change control, problem management, and communication among architects, engineers, and analysts. Establishes and enforces processes to ensure a consistent, well-managed, and well-integrated application infrastructure. Develops appropriate application and process documentation. Expertise with the BEA SA repository and its internal structure, Visual Basic, SA macros, Windows XT server, SQL server, and DoDAF modeling methodology. Has a deep understanding of Business Transformation Agency (BTA) and enterprise architecture's role in it, the BTA organizational structure, and experience in coordinating delivery and publishing of the Business Enterprise Architecture (BEA).

Client/Server Network Architect
Experience/Education: Minimum of 5 years of experience and a BA/BS degree
Description: Top-level technical expert responsible for design and development of a client/server environment. Develops strategy of client/server system and the design infrastructure necessary to support that strategy. Advises on selection of technological purchases with regards to processing, data storage, data access, and applications development. Sets standards for the client/server relational database structure for the organization (SQL, ORACLE, SYBASE, etc.). Advises of feasibility of potential future projects to management.

Software Architect
Experience/Education: Minimum of 5 years of experience and a BA/BS degree
Description: Works independently designing and developing new software products or major enhancements to existing software. May lead a large development team in design of highly complex software systems. Acts as highest-level technical expert, addressing problems of systems integration, compatibility, and multiple platforms. Responsible for project completion. Performs feasibility analysis on potential future projects to management.

Systems Engineer - Senior
Description: Under general direction, performs high-level systems analysis, evaluation, design, integration, documentation, and implementation of very complex application that require a thorough knowledge of administrative and technical skills. Directs and participates in all phases of system development with emphasis on planning, analysis, evaluation, integration, testing and acceptance phases (IV&V and DT&E). Applies higher-level business or technical principles and methods to very difficult technical problems to arrive at automated engineering solution. Designs and prepares technical reports and related documentation, and makes charts and graphs to record results. Prepare and deliver presentations and briefings as required by the Task Order. May be required to serve as Task Leader. Responsible for ensuring the quality and services delivered for particular task(s) for which this skill is performing the Task Leader position.

Systems Engineer - Intermediate
Description: Under general supervision, performs high-level systems analysis, evaluation, design, integration, documentation, and implementation of very complex application that require a thorough knowledge of administrative and technical skills. Directs and participates in all phases of system development with emphasis on planning, analysis, evaluation, integration,

testing and acceptance phases (IV&V and DT&E). Applies higher-level business or technical principles and methods to very difficult technical problems to arrive at automated engineering solution.

Systems Engineer - Associate
Description: Under direct supervision assists in performing systems analysis, evaluation, design, integration, documentation, and implementation of applications that require comprehensive knowledge and technical skills.

Network Engineer – Senior
Description: Under general direction, installs, configures, and supports an organization's local area network (LAN), wide area network (WAN), Agency Internet Network (AIN), Intranet and Internet, and other data communications systems or a segment of a network system; maintains network hardware and software; monitors network to ensure network availability to all system users and perform necessary maintenance to support network availability; may supervise other network support and client server specialists and plan, coordinate, and implement network security measures; and will provide leadership/mentorship to junior & mid-level network engineers. Oversees network control center; provides support to projects that involve networks; performs a full range of complex network designs encompassing multiple technologies within a single network; evaluates new network technologies and makes recommendations to project managers regarding the integration of these technologies into the existing network; plans new configurations for integration into the network, using knowledge of the performance characteristics of the systems being added to the network and the specifications for network interfaces to insure effective integration and optimal network performance; ensures that adequate and appropriate planning is provided for hardware and communications facilities to develop and implement methodologies for analysis, installation and support of voice communications systems; and provides support in the translation of business requirements into telecommunications (e.g., LAN, MAN, WAN, Voice, and Video) requirements, designs, and orders. The overarching INFOSEC and COMSEC security requirements for the Agency network add to the complexity of these positions.

Network Engineer – Intermediate
Description: Will complete tasks assigned by Senior Network Engineer. Under general supervision will install, configure, and support an organization's local area network (LAN), wide area network (WAN), Agency Internet Network (AIN), Intranet and Internet, and other data communications systems or a segment of a network system; maintain network hardware and software; monitors network to ensure network availability to all system users and perform necessary maintenance to support network availability; provides support to projects that involve networks; and provides support in the translation of business requirements into telecommunications (e.g., LAN, MAN, WAN, Voice, and Video) requirements, designs, and orders.

Network Engineer – Associate
Description: Will complete tasks assigned by Senior Network Engineer. Under direct supervision will install, configure, and support an organization's local area network (LAN), wide area network (WAN), Agency Internet Network (AIN), Intranet and Internet, and other data

communications systems or a segment of a network system; maintain network hardware and software; monitors network to ensure network availability to all system users and perform necessary maintenance to support network availability; provides support to projects that involve networks; and provides support in the translation of business requirements into telecommunications (e.g., LAN, MAN, WAN, Voice, and Video) requirements, designs, and orders.

Managed System Engineer - Senior
Description: Under general direction, performs duties such as site surveys, architecture design, system evaluation, system analysis, and infrastructure assessment. The managed system engineer shall perform duties on tasks that require expertise in system/processor architecture, wired for management baseline, desktop management interface, SNMP, client/server architecture, operating systems, software applications, network protocols, routers, switches, remote access servers, and firewalls.

Managed Systems Engineer - Intermediate
Description: Under general supervision, performs duties such as site surveys, architecture design, system evaluation, system analysis, and infrastructure assessment. Performs duties on tasks that require expertise in system/processor architecture, wired for management baseline, desktop management interface, SNMP, client/server architecture, operating systems, software applications, network protocols, routers, switches, remote access servers, and firewalls.

Managed Systems Engineer - Associate
Description: Under direct supervision, assists in site surveys, architecture design, system evaluation, system analysis, and infrastructure assessment.

IT Functional Area Expert
Experience/Education: Minimum of 5 years of experience and BS degree
Description: Recognized for strong expertise in industry issues and trends. Utilizes functional area expertise gained through direct industry experience to assess the operational and functional baseline of an organization and its organizational components. Works with senior managers and executives to provide industry vision and strategic direction with regard to their enterprise. Guides the determination of information technology inadequacies and/or deficiencies that affect the functional area's ability to support/meet organizational goals. Generates functional area strategies for enhanced IT operations in a cross-functional area mode throughout the organization. Participates in account strategy sessions, strategic assessments, and design reviews to validate enterprise approach and associated work products. Provides guidance and direction to other professionals, acts in a consulting and/or advisory capacity; coordinates resolution of highly complex problems and tasks, and possesses ability to meet and operate under deadlines.

IT Subject Matter Expert
Experience/Education: Minimum of 5 years of experience and a BA/BS or MA/MS degree
Description: Executes tasks and projects relevant to subject matter. Reduces issues to practical recommended options. Explains recommendation to decision-makers in terms that permit decisions. Performs studies and analyses on subjects within the technical scope of work. Develops requirements from a project's inception to its conclusion for a particular IT subject

matter area (i.e., simple to complex systems). Assists other project members with analysis and evaluation and with the preparation of recommendations for system improvements, optimization, development, and/or maintenance efforts in the following specialties: information systems architecture; networking; telecommunications; automation; communications protocols; risk management/electronic analysis; software; lifecycle management; software development methodologies; and modeling and simulation. Recognized at the industry level in a technical field or specialized engineering or technology area and is proficient in relevant engineering principles and practices. Applies experience, skills, and expert knowledge within an engineering discipline to complex assignments. Generates unique concepts as evidenced by synthesis of new products or processes. Creates or uses engineering/scientific tools to solve technical problems. Utilizes and develops tools, techniques, processes, and/or facilities such as state-of-the-art simulation environments, laboratories, and test facilities. Provides leadership for engineering activities in a specialized engineering or technology subject area. Serves as a major contributor to technical planning process and for providing technical management and guidance.

Applications Systems Analyst – Senior
Description: Under general direction, formulates/defines system scope and objectives based on user needs. Devises or modifies procedures to solve complex problems considering computer equipment capacity and limitations, operating time and form of desired results. Prepares detailed specifications from which programs will be written. Analyzes and revises existing system logic difficulties and documentation as necessary. Competent to work at the highest technical level of all phases of applications systems analysis activities. May use Computer-aided software engineering (CASE) tools.

Applications Systems Analyst – Intermediate
Description: Under general supervision, formulates and defines system scope and objectives through research and fact-finding to develop or modify moderately complex information systems. Prepares detailed specifications from which programs will be written. Analyzes and revises existing system logic difficulties and documentation as necessary. Competent to work on most phases of applications systems analysis activities, but requires instruction and guidance in other phases. May use CASE tools.

Applications Systems Analyst – Associate
Description: Under immediate supervision, assists in research and fact-finding to develop or modify information systems. Assists in preparing detailed specifications from which programs will be written. Analyzes and revises existing system logic difficulties and documentation as necessary. May use CASE tools.

Software Engineer – Senior
Description: Under general direction, conducts or participates in multidisciplinary research and collaborates with equipment designers and/or hardware engineers in the planning, design, development, and utilization of electronic data processing systems software. Determines computer user needs; advises hardware designers on machine characteristics that affect software systems such as storage capacity, processing speed, and input/output requirements; designs and develops compilers and assemblers, utility programs, and operating systems.

Software Engineer – Intermediate
Description: Under general supervision, conducts or participates in multidisciplinary research and collaborates with equipment designers and/or hardware engineers in the planning, design, development, and utilization of electronic data processing systems software. Determines computer user needs; advises hardware designers on machine characteristics that affect software systems such as storage capacity, processing speed, and input/output requirements; designs and develops compilers and assemblers, utility programs, and operating systems.

Software Engineer – Associate
Description: Under direct supervision, assists in designing and developing compilers and assemblers, utility programs, and operating systems.

Applications Programmer – Senior
Description: Under general direction, devises or modifies procedures to solve complex problems considering computer equipment capacity and limitations, operating time and form of desired results. Designs, codes, tests, debugs and documents those programs. Competent to work at the highest technical level of all phases of applications programming activities. Note: This position does not perform systems analysis functions.

Applications Programmer – Intermediate
Description: Under general supervision, modifies moderately complex applications programs from detailed specification. Codes, tests, debugs, and documents and maintains those programs. Competent to work on most phases of applications programming activities, but requires instruction and guidance in phases. Note: This position does not perform systems analysis functions.

Applications Programmer – Associate
Description: Under immediate supervision, modifies applications programs from detailed specifications. Codes, tests, debugs, documents and maintains those programs. This level is staffed by beginners who have had sufficient educational background and/or experience to qualify them to start in applications programming. Note: This position does not perform systems analysis functions.

IT Certified Professional – Senior
Description: Under general direction, responsible for the most complex testing and analysis of all elements of the network facilities including: power, software, communications devices, lines, modems and terminals. Monitors and controls the performance and status of the network resources. May function in a lead capacity within the department. Provides guidance and direction for less experienced personnel.

IT Certified Professional –Intermediate
Description: Under general supervision, responsible for moderately complex tasks typically relating to network monitoring, operations, installation or maintenance. Handles routine network activities and identifies and resolves routine network problems.

IT Certified Professional – Associate
Description: Under direct supervision, assists in monitoring and responding to technical control facility hardware and software problems utilizing hardware and software testing tools and techniques. May provide LAN server support. May assist installing terminals and associated hardware. Requires knowledge of data scopes, patch panels, modems, concentrators, and associated terminal and network management software.

Seat Management Administrator
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: The seat management administrator shall perform duties such as configuration management, infrastructure management, asset management, help desk, system analysis, and infrastructure assessment. The seat management administrator shall perform duties on tasks that require expertise in system/processor architecture, wired for management baseline, desktop management interface, SNMP, client/server architecture, operating systems, software applications, network protocols, routers, switches, remote access servers, and firewalls.

Configuration Management (CM) Specialist - Senior
Description: Under general direction, responsible for effectively tracking, logging, categorizing, and maintaining changes made against the accepted Army baseline(s) standards. Develops, distributes, and tracks all change packages resulting from approved Configuration Control Board action. Trains personnel by conducting workshops and seminars on the proper methodology to maintain a proactive CM program. Provides daily support and direction to staff as to change status requirements, deadlines, and problems.

Configuration Management (CM) Specialist - Intermediate
Description: Under immediate supervision, responsible for effectively tracking, logging, categorizing, and maintaining changes made against the accepted Army baseline(s) standards. Develops, distributes, and tracks all change packages resulting from approved Configuration Control Board action.

Configuration Management (CM) Specialist - Associate
Description: Under immediate supervision, distributes and tracks all change packages resulting from approved Configuration Control Board action. Provides daily support to staff as to change status requirements, deadlines, and problems.

Computer Operator – Senior
Description: Under general direction, monitors and controls one or more servers by operating the central console or on-line terminals. Studies program operating instruction sheets to determine equipment setup and run operations. Continuously observes the operation of the console panel, storage devices, and printers to monitor the system and determine the point of equipment or program failure. Manipulates controls in accordance with standard procedures to rearrange sequence of job steps to continue operations when individual units of the system malfunction. Confers with software systems engineering or applications programming personnel in the event errors require a change of instructions or sequence of operations. Maintains operating records such as machine performance and production reports. Competent to work at the highest level of all computer operations phases.

Computer Operator – Intermediate
Description: Under general supervision, monitors and controls a computer by operating the central console or on-line terminals. May operate auxiliary equipment directly associated with the computer. May maintain records regarding output units and supply inventories. May assist in manipulating controls to rearrange sequence of job steps to continue operations when individual units of the system malfunction. Competent to work on most phases of computer operations, but still may require some instruction and guidance for other phases.

Computer Operator – Associate
Description: Under immediate supervision, assists in performing routine tasks associated with operating a computer in accordance with detailed instructions.

Distribution Operations Specialist – Senior
Description: Under indirect supervision, responsible for review/develop/modify/test procedures and systems requirements to manage property book requirements directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Train internal and external customers regarding procedures/processes and software applications. Conduct internal audits and development/review of corrective action plans. Negotiate supplier agreements and service contracts as required by job. Have knowledge of capital procurement processes. Perform duties and responsibilities as the lead on process improvement teams. Coordinate workflow and material movement to meet program and customer delivery requirements.

Distribution Operations Specialist – Intermediate
Description: Under general direction, responsible for review/develop/modify/test procedures and systems requirements to manage property book requirements directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Train internal and external customers regarding procedures/processes and software applications. Conduct internal audits and development/review of corrective action plans. Negotiate supplier agreements and service contracts as required by job. Have knowledge of capital procurement processes. Perform duties and responsibilities as the lead on process improvement teams. Coordinate workflow and material movement to meet program and customer delivery requirements.

Distribution Operations Specialist - Associate
Description: Under immediate supervision, responsible for review/develop/modify/test procedures and systems requirements to manage property book requirements directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Train internal and external customers regarding procedures/processes and software applications. Conduct internal audits and development/review of corrective action plans. Negotiate supplier agreements and service contracts as required by job. Have knowledge of capital procurement processes. Perform duties and responsibilities as the lead on process improvement teams. Coordinate workflow and material movement to meet program and customer delivery requirements.

Information Assurance Engineer - Senior
Description: Under general direction, responsible for all activities relating to information assurance procedures and systems. Develops information systems assurance programs and control guidelines. Confers with and advises subordinates on administrative policies and procedures and resolving technical problems, priorities, and methods. Consults with and advises other sections regarding internal controls and security procedures. Prepares activity and progress reports relating to the information systems audit function.

Information Assurance Engineer - Intermediate
Description: Under general supervision, develops information systems assurance programs and control guidelines, assists in resolving technical problems, priorities, and methods.

Information Assurance Engineer - Associate
Description: Under general supervision, audits new and existing information systems applications to ensure that appropriate controls exist, that processing is efficient and accurate, and that systems procedures are in compliance with corporate standards

Information Systems Auditor – Senior
Description: Under general direction, audits the most complex new and existing information systems applications to ensure that appropriate controls exist, that processing is efficient and accurate, and that information systems procedures are in compliance with corporate standards. Competent to work at the highest level of all phases of information systems auditing.

Information Systems Auditor – Intermediate
Description: Under general supervision, audits moderately complex new and existing information systems applications to ensure that appropriate controls exist, that processing is efficient and accurate, and that systems and procedures are in compliance with corporate standards. Competent to work on most phases of information systems auditing.

Information Systems Auditor – Associate
Description: Under direct supervision, carries out routine phases of the systems audit function. Assists in the auditing of new and existing information systems applications to ensure that appropriate controls exist, that processing is efficient and accurate, and that systems and procedures are in compliance with corporate standards. Staffed by skilled employees who have had sufficient educational background and/or experience in information systems auditing.

Data Security Analyst – Senior
Description: Under general direction, performs all procedures necessary to ensure the safety of information systems assets and to protect systems from intentional or inadvertent access or destruction. Interfaces with user community to understand their security needs and implements procedures to accommodate them. Ensures that user community understands and adheres to necessary procedures to maintain security. May require familiarity with domain structures, user authentication, and digital signatures. Conducts accurate evaluation of the level of security required. May require understanding of firewall theory and configuration. Must be able to weigh business needs against security concerns and articulate issues to management.

Data Security Analyst – Intermediate
Description: Under general supervision, performs all procedures necessary to ensure the safety of information systems assets and to protect systems from intentional or inadvertent access or destruction. Interfaces with user community to understand their security needs and implements procedures to accommodate them. Ensures that user community understands and adheres to necessary procedures to maintain security. May require familiarity with domain structures, user authentication, and digital signatures. Conducts accurate evaluation of the level of security required. May require understanding of firewall theory and configuration. Frequently reports to a Senior Data Security Analyst.

Data Security Analyst – Associate
Description: Under direct supervision, performs all procedures necessary to ensure the safety of information, systems assets and to protect systems from intentional or inadvertent access or destruction. Interfaces with user community to understand their security needs and implements procedures to accommodate them. Ensures that user community understands and adheres to necessary procedures to maintain security. Conducts accurate evaluation of the level of security required. Provides management with status reports. Frequently reports to an Intermediate Data Security Analyst.

Disaster Recovery/COOP/Contingency Administrator
Experience/Education: Minimum of 10 years of experience and MS/PhD degree
Description: Responsible for preparing contingency plans for system software, hardware, and applications for the organization. Implements procedures to ensure business applications continue to function through disruptive incidents within an organization. Develops and maintains various security controls to protect technology assets from internal or inadvertent modification, disclosure or destruction. Provides reports to supervisors regarding effectiveness of data security and make recommendations for the adoption of new procedures. Oversees and facilitates the preparation of an organization-wide business resumption plan. Responsible for ensuring the business resumption plan adequately addresses the organization's requirements and established timeframes. Responsible for day-to-day security administration of the organization's data systems and data networks including systems access administration.

Information Security Specialist - Senior
Description: Under general direction, uses current information security technology disciplines and practices to ensure the confidentiality, integrity, and availability of corporate information assets in accordance with established standards and procedures. Develops and maintains knowledgebase on changing regulatory, threat, and technology landscapes to continually develop or maintain security policies and standards, and ensure compliance throughout the organization.

Information Security Specialist - Intermediate
Description: Under general supervision, uses current information security technology disciplines and practices to ensure the confidentiality, integrity, and availability of corporate information assets in accordance with established standards and procedures. Develops and maintains knowledgebase on changing regulatory, threat, and technology landscapes to continually develop or maintain security policies and standards, and ensure compliance throughout the organization.

Information Security Specialist - Associate
Description: Under direct supervision, assists in developing and maintaining knowledgebase on changing regulatory, threat, and technology landscapes to continually develop or maintain security policies and standards, and ensure compliance throughout the organization.

IA Policy and Compliance Certified Professional – Senior
Description: Under general direction, performs and leads support of Certification and Accreditation (C&A) or other IA/CND Compliance and Auditing processes and inspections for all enterprise systems and networks; ensures validity and accuracy review of all associated documentation. Leads and performs compliance reviews of computer security plans, performs

risk assessments, and validates and performs security test evaluations and audits. Analyzes and defines security requirements for information protection for enterprise systems and networks. Assists in the development of security policies. Analyzes the sensitivity of information and performs vulnerability and risk assessments on the basis of defined sensitivity and information flow. Professionally certified as Technical Level III as defined by DODI 8570 is a requirement.

IA Policy and Compliance Certified Professional – Intermediate
Description: Under general supervision, performs Certification and Accreditation (C&A) or other IA/CND Compliance and Auditing processes and inspections for all enterprise systems and networks; ensures validity and accuracy review of all associated documentation. Performs compliance reviews of computer security plans, performs risk assessments, and performs security test evaluations and audits. Analyzes security requirements for information protection for enterprise systems and networks. Assists in the development of security policies. Analyzes the sensitivity of information and performs vulnerability and risk assessments on the basis of defined sensitivity and information flow. Professionally certified as Technical Level II as defined by DODI 8570 is a requirement.

IA Policy and Compliance Certified Professional – Associate
Description: Under general supervision, assists in the support of Certification and Accreditation (C&A) or other IA/CND Compliance and Auditing processes and inspections for all enterprise systems and networks; assists in the development of all associated documentation. Assists in the compliance reviews of computer security plans, performs risk assessments, and assists in security test evaluations and audits. Analyzes security requirements for information protection for enterprise systems and networks. Professionally certified as Technical Level I as defined by DODI 8570 is a requirement.

Cyber Operations Research Analyst – Senior
Description: Under general direction, leads and participates in analysis of actual and predictable interacting operational activities of business to obtain a quantitative, rational basis for decision making through the application of logic and scientific or economic disciplines and techniques. Ability to devise modeling and measuring techniques; utilizes mathematics, statistical methods, engineering methods, operational mathematics techniques (linear programming, game theory, probability theory, symbolic language, etc.), and other principles and laws of scientific and economic disciplines. Ability to demonstrate a complete understanding and wide application of technical principles, theories, and concepts within the Cyber Research field and provide consultation to technical solutions over a wide range of complex difficult problems in which proposed solutions are imaginative, thorough, practicable, and consistent with organization objectives. Professionally certified as Technical Level III as defined by DODI 8570 is a requirement.

Cyber Operations Research Analyst – Intermediate
Description: Under general supervision, participates in analysis of actual and predictable interacting operational activities of business to obtain a quantitative, rational basis for decision making through the application of logic and scientific or economic disciplines and techniques. Assists in devising models and measuring techniques; utilizes mathematics, statistical methods, engineering methods, operational mathematics techniques (linear programming, game theory,

probability theory, symbolic language, etc.), and other principles and laws of scientific and economic disciplines. Ability to demonstrate a thorough understanding and ability to apply technical principles, theories, and concepts within the Cyber Research field and provide consultation to technical solutions over a wide range of complex difficult problems in which proposed solutions are imaginative, thorough, practicable, and consistent with organization objectives. Professionally certified as Technical Level II as defined by DODI 8570 is a requirement.

Cyber Operations Research Analyst – Associate
Description: Under general supervision, assists in analysis of actual and predictable interacting operational activities of business to obtain a quantitative, rational basis for decision making through the application of logic and scientific or economic disciplines and techniques. Assists with devising models and measuring techniques; utilizes mathematics, statistical methods, engineering methods, operational mathematics techniques (linear programming, game theory, probability theory, symbolic language, etc.), and other principles and laws of scientific and economic disciplines. Professionally certified as Technical Level I as defined by DODI 8570 is a requirement.

Cyber Operations Malware Analyst – Senior
Description: Under general direction, leads and participates in the evaluation and analysis of complex malicious code through the utilization of tools, including dissemblers, debuggers, hex editors, un-packers, virtual machines, and network sniffers. Responsible for providing findings in a technical report with details of the malware, identification parameters, advanced capabilities, and mitigation strategies. Conducts research in the area of malicious software, vulnerabilities, and exploitation tactics. Requires experience with application security, network security, reverse engineering, or malware. Requires strong knowledge of worms, viruses, Trojans, rootkits, botnets, Windows internals, and the Win32 API. Extensive experience required in programming (assembly and web) and system analysis with various tools, including IDA Pro, Ollydbg, PCAP tools, or TCP Dump. Professionally certified, within a Computer Network Defense (CND) discipline, as Technical Level III as defined by DODI 8570 is a requirement.

Cyber Operations Malware Analyst – Intermediate
Description: Under general supervision, participates in the evaluation and analysis of complex malicious code through the utilization of tools, including dissemblers, debuggers, hex editors, un-packers, virtual machines, and network sniffers. Responsible for providing findings in a technical report with details of the malware, identification parameters, advanced capabilities, and mitigation strategies. Conducts research in the area of malicious software, vulnerabilities, and exploitation tactics. Requires experience with application security, network security, reverse engineering, or malware. Requires thorough knowledge of worms, viruses, Trojans, rootkits, botnets, Windows internals, and the Win32 API. Additional experience required in programming (assembly and web) and system analysis with various tools, including IDA Pro,

Ollydbg, PCAP tools, or TCP Dump. Professionally certified, within a CND discipline, as Technical Level II as defined by DODI 8570 is a requirement.

Cyber Operations Malware Analyst – Associate
Description: Under general supervision, assists in the evaluation and analysis of complex malicious code through the utilization of tools, including dissemblers, debuggers, hex editors, un-packers, virtual machines, and network sniffers. Assists with providing findings in a technical report with details of the malware, identification parameters, advanced capabilities, and mitigation strategies. Provides research assistance in the area of malicious software, vulnerabilities, and exploitation tactics. Requires experience with application security, network security, reverse engineering, or malware. Requires knowledge of worms, viruses, Trojans, rootkits, botnets, Windows internals, and the Win32 API. Additional experience required in programming (assembly and web) and system analysis with various tools, including IDA Pro, Ollydbg, PCAP tools, or TCP Dump. Professionally certified, within a CND discipline, as Technical Level I as defined by DODI 8570 is a requirement.

Cyber Watch Operations Certified Analyst – Senior
Description: Under general direction, leads security event monitoring and correlation within a tiered Security Operations Center. Proven experience and ability to leverage CND analyst toolsets to detect and respond to IT security incidents. Ability to implement standard procedures for incident response interfacing with Information Security Officer and IT staff. Conducts research and document threats and their behavior to include monitoring external CSIRTs/CERTs. Provide recommendations to threat mitigation strategies. Employ effective web, email, and telephonic communications to clearly manage security incident response procedures. Perform routine event reporting over time including trend reporting and analysis. Experience required in security or network technology (Unix/Windows OS, Cisco/Juniper Routing-Switching) within a hands-on design/Implementation/Administration role. Demonstrates in-depth knowledge of TCP-IP protocol implementations for all common network services in addition to demonstrated capability to perform network packet analysis and anomaly detection. Professionally certified, within a CND discipline, as Technical Level III as defined by DODI 8570 is a requirement.

Cyber Watch Operations Certified Analyst – Intermediate
Description: Under general supervision, participates in security event monitoring and correlation within a tiered Security Operations Center. Proven experience and ability to leverage CND analyst toolsets to detect and respond to IT security incidents. Conducts research and document threats and their behavior to include monitoring external CSIRTs/CERTs. Assist in providing recommendations to threat mitigation strategies. Employ effective web, email, and telephonic communications to clearly manage security incident response procedures. Perform routine event reporting over time including trend reporting and analysis. Experience required in security or network technology (Unix/Windows OS, Cisco/Juniper Routing-Switching) within a hands-on Implementation or Administration role. Demonstrates thorough knowledge of TCP-IP protocol implementations for all common network services in addition to demonstrated capability to perform network packet analysis and anomaly detection. Professionally certified, within a CND discipline, as Technical Level II as defined by DODI 8570 is a requirement.

Cyber Watch Operations Certified Analyst – Associate
Description: Under general supervision, assists with security event monitoring, correlation, and daily event reporting within a tiered Security Operations Center. Experience with CND analyst toolsets to detect and respond to IT security incidents. Employ effective web, email, and telephonic communications to clearly manage security incident response procedures. Experience required in security or network technology (Unix/Windows OS, Cisco/Juniper Routing-Switching) within a hands-on Administration role. Demonstrates knowledge of TCP-IP protocol implementations for all common network services in addition to demonstrated capability to perform network packet analysis and anomaly detection. Professionally certified, within a CND discipline, as Technical Level I as defined by DODI 8570 is a requirement.

Systems Administrator – Senior
Description: Under general direction, responsible for activities related to system administration. Assigns personnel to various projects, directs their activities, and evaluates their work. Ensures long-term requirements of systems operations and administration are included in the overall information systems planning of the organization. Responsible for the installation, maintenance, configuration, and integrity of computer software. Implements operating system enhancements that will improve the reliability and performance of the system.

Systems Administrator – Intermediate
Description: Under general supervision, responsible for installing, configuring, and maintaining operating system workstations and servers, including web servers, in support of business processing requirements. Performs software installations and upgrades to operating systems and layered software packages. Schedules installations and upgrades and maintains them in accordance with established IT policies and procedures. Monitors and tunes the system to achieve optimum performance levels. Ensures workstation/server data integrity by evaluating, implementing, and managing appropriate software and hardware solutions. Ensures data/media recoverability by implementing a schedule of system backups and database archive operations. Supports media management through internal methods and procedures or through offsite storage and retrieval services. Develops and promotes standard operating procedures. Conducts routine hardware and software audits of workstations and servers to ensure compliance with established standards, policies, and configuration guidelines. Develops and maintains a comprehensive operating system hardware and software configuration database/library of all supporting documentation.

Systems Administrator -Associate
Description: Under direct supervision, maintains integrity of the operating system environment. Performs system software upgrades including planning and scheduling, testing, and coordination. Performs workstation and server administration setup. Coordinates disk space planning and

management. Maintains growth statistics, space forecasts, tape libraries, and software and hardware inventories. Performs data backups and recoveries. Monitors and maintains continuity with system software licensing and maintenance agreements. Provides recommendations regarding hardware and system software planning and budgeting. Maintains production change control schedule and participates in change control.

Database Administrator

Experience/Education: Minimum of 10 years of experience and MS/PhD degree
Description: Participates in the design, creation, and maintenance of computerized databases. Responsible for the quality control and auditing of databases to ensure accurate and appropriate use of data. Works with management to develop database strategies to support organization requirements. Consults with and advises users on access to various databases. Works directly with users to resolve data conflicts and inappropriate data usage. Directs the maintenance and use of the corporate data dictionary.

Database Analyst/Programmer – Senior

Description: Under general direction, designs, implements and maintains complex databases with respect to JCL, access methods, access time, device allocation, validation checks, organization, protection and security, documentation, and statistical methods. Includes maintenance of database dictionaries, overall monitoring of standards and procedures, and integration of systems through database design. Competent to work at the highest level of all phases of database management.

Database Analyst/Programmer – Intermediate

Description: Under general supervision, designs, implements, and maintains moderately complex databases. Includes maintenance of database dictionaries and integration of systems through database design. Competent to work on most phases of database administration, but may require some instruction and guidance in other phases.

Database Analyst/Programmer – Associate

Description: Under direct supervision, assists in the implementation and maintenance of databases.

Advanced Database Analyst/Programmer - Senior

Description: Under general direction, leads and participates in the development and maintenance of Cyber and IA database systems while also offering database development resource to the development team. Required to review and provide technical solutions to projects which may be in different stages of the development life cycle. Requires knowledge and experience with

Oracle or MS SQL Server DBMS, SQL Language, Unix/Linux including basic shell commands, data warehousing, report generation, job scheduling and monitoring tools, XML, HTML, open source development, and technical documenting skills (Windows Office/Visio/Cvs, etc.). Advanced Oracle or Microsoft SQL Server certification is required. Professionally certified as Technical Level III as defined by DODI 8570 is a requirement.

Advanced Database Analyst/Programmer - Intermediate
Description: Under general supervision, participates in the development and maintenance of Cyber and IA database systems while also offering database development resource to the development team. Required to review and provide technical solutions to projects which may be in different stages of the development life cycle. Requires knowledge and experience with Oracle or MS SQL Server DBMS, SQL Language, Unix/Linux including basic shell commands, data warehousing, report generation, job scheduling and monitoring tools, XML, HTML, open source development, and technical documenting skills (Windows Office/Visio/Cvs, etc.). Oracle or Microsoft SQL Server certification is required. Professionally certified as Technical Level II as defined by DODI 8570 is a requirement.

Advanced Database Analyst/Programmer – Associate
Description: Under general supervision, assists in the development and maintenance of Cyber and IA database systems while also offering database development resource to the development team. Assists with reviews and provides technical solutions to projects which may be in different stages of the development life cycle. Requires knowledge and experience with Oracle or MS SQL Server DBMS, SQL Language, Unix/Linux including basic shell commands, data warehousing, report generation, job scheduling and monitoring tools, XML, HTML, open source development, and technical documenting skills (Windows Office/Visio/Cvs, etc.). Oracle or Microsoft SQL Server certification is required. Professionally certified as Technical Level I as defined by DODI 8570 is a requirement.

Database Librarian
Experience/Education: Minimum of 2 years of experience and BS degree
Description: Under general supervision, enters and maintains data dictionary information, data keyword lists, and dictionary forms. Reviews all information to be entered into the dictionary to assure adherence to standards and to ensure that all requirements are met. Maintains current library of each processing system's information recorded in the dictionary.

Data Warehousing Project Manager
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Works in a data warehouse environment that includes data design, database architecture, metadata and repository creation. Responsible for leading data warehouse team in development and enhancements of the data warehouse user interface. Establishes user requirements. Creates new standards and procedures related to end user and internal interface development. Works with Data Architect on technical issues and system architecture definition. Translates high-level work plans and converts to detailed assignments for team members. Monitors status of assignments and reviews work for completion/quality.

Data Architect
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Works in a data warehouse environment that includes data design, database architecture, metadata and repository creation. Translates business needs into long-term architecture solutions. Defines, designs, and builds dimensional databases. Responsible for developing data warehousing blueprints, evaluating hardware and software platforms, and integrating systems. Evaluates reusability of current data for additional analyses. Conducts data cleaning to rid the system of old, unused, or duplicate data. Reviews object and data models and the metadata repository to structure the data for better management and quicker access.

Data Warehouse Analyst
Experience/Education: Minimum of 3 years of experience and BA/BS degree
Description: Works in a data warehouse environment that includes data design, database architecture, metadata and repository creation. Reviews data loaded into the data warehouse for accuracy. Responsible for the development, maintenance and support of an enterprise data warehouse system and corresponding data marts. Troubleshoots and tunes existing data warehouse applications. Conducts research into new data warehouse applications and determines viability for adoption. Assists in establishing development standards. Evaluates existing subject areas stored in the data warehouse. Incorporated existing subject areas into an enterprise model. Creates new or enhanced components of the data warehouse.

Data Warehousing Programmer
Experience/Education: Minimum of 3 years of experience and BA/BS degree
Description: Under general supervision, responsible for product support and maintenance of the data warehouse. Performs data warehouse design and construction. Codes and documents scripts and stored procedures. Designs and implements data strategy methods. Develops appropriate programs and systems documentation. Assists with metadata repository management. Prepares and implements data verification and testing methods for the data warehouse. Creates index and view scripts.

Data Warehousing Administrator
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Under general supervision, coordinates the data administration technical function for both data warehouse development and maintenance. Plans and oversees the technical transitions between development, testing, and production phases of the workplace. Facilitates change control, problem management, and communication among data architects, programmers,

analysts, and engineers. Establishes and enforces processes to ensure a consistent, well managed, and well-integrated data warehouse infrastructure. Expands and improves data warehouse to include data from all functions of the organization using data manipulation, transformation, and cleansing tools.

Help Desk Coordinator
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Responsible for ensuring the timely process through which problems are controlled, including problem recognition, research, isolation, resolution and follow-up steps. Requires experience and understanding of MIS environment. Is able to resolve less complex problems immediately, while more complex problems are assigned to second level support or supervisor. Typically involves use of problem management database and help desk system. May provide guidance/training for less experienced personnel.

Help Desk Support Service Specialist – Senior
Description: Under general direction, provides second-tier support to end-users for PC, server, mainframe applications, and hardware. Handles problems that the first-tier of help desk support is unable to resolve. May interact with network services, software systems engineering, and/or applications development to restore service and/or identify and correct core problem. Simulates or recreates user problems to resolve operating difficulties. Recommends systems modifications to reduce user problems. Maintains currency and highest level of technical skill in field of expertise.

Help Desk Support Service Specialist – Intermediate
Description: Under general supervision, provides second-tier support to end-users for PC, server, mainframe applications and hardware. Handles problems that the first-tier of help desk support is unable to resolve. May interact with network services, software systems engineering, and/or applications development to restore service and/or identify and correct core problem. Simulates or recreates user problems to resolve operating difficulties. Recommends systems modifications to reduce user problems. Maintains currency and high level of technical skill in field of expertise. Escalates more complex problems to Senior level.

Help Desk Support Service Specialist – Associate
Description: Under direct supervision, provides support to end-users for PC, server or mainframe applications, and hardware. May interact with network services, software systems engineering and/or applications development to restore service and/or identify and correct core problems.

Simulates or recreates user problems to resolve operating difficulties. Recommends systems modifications to reduce user problems. Refers more complex problems to Intermediate and/or Senior level.

PC Support Manager
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Responsible for overall personal computer activity. Establishes and implements PC policies, procedures and standards, and ensures their conformance with information systems goals and procedures. Studies and projects PC resource requirements including personnel, software, equipment and facilities, and makes recommendations to management. Maintains currency in new developments and technology. Provides for the training of department staff and end users. Directs setup and maintenance of library and materials for end user reference and reviews department staff. Ensures that security procedures are implemented and enforced. Provides leadership in the effective use of internal data processing, automated office systems and data communications. May also manage LAN services.

PC Systems Specialist
Experience/Education: Minimum of 3 years of experience and BA/BS degree
Description: Under general supervision, performs analytical, technical and administrative work in the planning, design and installation of new and existing personal computer systems. Works on moderately complex applications. Confers with end users to determine types of hardware and software required. Writes programs to fulfill requirements or selects appropriate off-the-shelf software and modifies to suit. May maintain or utilize telecommunications protocols. Installs new hardware and maintains existing hardware. Trains end users in use of equipment and software.

PC Maintenance Technician
Experience/Education: Minimum of 2 years of experience and BS degree
Description: Under direct supervision, performs general maintenance tasks, troubleshoots and repairs computer systems and peripheral equipment located throughout the organization. Maintains an adequate spare parts inventory of systems, subsystems, and component parts used in repair work. Prepares progress reports for all work performed. Receives work direction from supervisor on work priorities and daily assignments. Frequently reports to a PC Support Manager.

Web Project Manager
Experience/Education: Minimum of 10 years of experience and MS/PhD degree

Description: Responsible for web strategy and operations. Develops business plan and annual budget for website function. Accountable for budget, staff planning, management, and products and service delivery. Oversees operational activities of the website(s) with specific attention aimed at content creation and website maintenance.

Web Designer - Senior
Description: Under general direction, designs and builds web pages using a variety of graphics software applications, techniques, and tools. Designs and develops user interface features, site animation, and special-effects elements. Contributes to the design group's efforts to enhance the look and feel of the organization's online offerings. Designs the website to support the organization's strategies and goals relative to external communications. Requires understanding of web-based technologies and thorough knowledge of HTML, PhotoShop, Illustrator, and/or other design-related applications.

Web Designer - Intermediate
Description: Under general supervision, designs and develops user interface features, site animation, and special-effects elements. Contributes to the design group's efforts to enhance the look and feel of the organization's online offerings. Designs the website to support the organization's strategies and goals relative to external communications. Develops applications based on current, new, and future net-based applications. Requires significant graphics and design experience as well as HTML knowledge.

Web Designer - Associate
Description: Under direct supervision assists in designing and developing user interface features, site animation, and special-effects elements. Assists in designing the website to support the organization's strategies and goals relative to external communications. Requires graphics and design experience as well as HTML knowledge.

Web Software Developer - Senior
Description: Under general direction, designs, develops, troubleshoots, debugs, and implements software code (such as HTML, CGI, and JavaScript) for a component of the website. Works with graphic designers and other members of a project team to develop the site concept, interface design, and architecture of the website. Responsible for interface implementation. Integrates web applications with backend databases. Deploys large web-based transaction systems using application servers. Researches, tests, builds, and coordinates the integration of new products per production and client requirements. Requires strong navigation and site-design instincts.

Web Software Developer - Intermediate
Description: Under general supervision, develops, codes, tests, and debugs new software and enhancements to existing web software. Competent to work on fairly complex programs with guidance. Works with technical staff to understand problems with web software and resolve them.

Web Software Developer - Associate
Description: Under direct supervision, assists in developing, coding, testing, and debugging new software and enhancements to existing web software.

Web Technical Administrator
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: In role of onsite administrator, responsible for achieving overall technical integrity of organization's website. Maintains and upgrades hardware and software including website technical architecture related to hardware and telecommunication connectivity. Administers e-mail, chat, and FTP services. Communicates router configuration changes and troubleshoots system errors and bugs. Maintains servers, creates monitoring reports and logs, and ensures functionality of links. Monitors site for acceptable performance and user accessibility. Establishes backups and monitors site security.

Web Content Administrator
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Responsible for developing and providing content that will motivate and entertain users so that they regularly access the website and utilize it as a major source for information and decision-making. Responsible for managing/performing website editorial activities including gathering and researching information that enhances the value of the site. Locates, negotiates, and pursues content. Seeks out customers to gather feedback for website improvement and enhancements. Requires experience in production management, web page design, HTML, and web graphics types and standards.

Network Administrator – Senior
Description: Under general direction, responsible for the acquisition, installation, maintenance and usage of the company's local area network. Studies contractor products to determine those which best meet company needs; assists in presentation of information to management resulting in purchase and installation of hardware, software, and telecommunication equipment. Manages network performance and maintains network security. Ensures that security procedures are implemented and enforced. Installs all network software. Evaluates, develops and maintains telecommunications systems. Troubleshoots network problems. Establishes and implements network policies, procedures and standards and ensures their conformance with information systems and company's objectives. Trains users on network operation.

Network Administrator – Intermediate
Description: Under general supervision, responsible for the acquisition, installation, maintenance, and usage of the organization's local area network. Manages network performance and maintains network security. Ensures that security procedures are implemented and enforced. Installs all network software. Evaluates, develops and maintains telecommunications systems. Troubleshoots network problems. Establishes and implements network policies, procedures, and standards and ensures their conformance with information systems and organization objectives.

Trains users on network operation. Frequently reports to a PC support manager or Senior Network Administrator.

Network Administrator - Associate
Description: Under direct supervision, assists in the installation, maintenance, and usage of the organization's local area network. Assists in the establishment of network procedures regarding access methods and time, security validation checks, and documentation. Maintains network software and hardware inventories. Researches software and hardware issues regarding the network. Inform users when there are network problems. Monitors and maintains continuity with software licensing and maintenance agreements. Troubleshoots network problems. Frequently reports to a PC Support Manager or Senior Network Administrator

Network Support Technician – Senior
Description: Under general direction, monitors and responds to complex technical control facility hardware and software problems utilizing a variety of hardware and software testing tools and techniques. Provides primary interface with contractor support service groups or provides internal analysis and support to ensure proper escalation during outages or periods of degraded system performance. May provide network server support. Requires extensive knowledge of PC/network communications hardware/software in a multi-protocol environment, and network management software. May function as lead providing guidance and training for less experienced technicians.

Network Support Technician – Intermediate
Description: Under general supervision, monitors and responds to technical control facility hardware and software problems utilizing hardware and software testing tools and techniques. May interface with contractor support service groups to ensure proper escalation during outages or period of degraded system performance. May assist with installation of terminals and associated hardware. May provide network server support. Requires strong knowledge of PC/Network communications hardware/software, in a multi-protocol environment, and network management software.

Network Support Technician – Associate
Description: Under direct supervision, assists in monitoring and responding to technical control facility hardware and software problems utilizing hardware and software testing tools and techniques. May provide network server support. May assist with installation of terminals and associated hardware. Requires knowledge of data scopes, patch panels, modems, concentrators, and associated terminals and network management software.

Documentation Specialist – Senior
Description: Under general direction, is responsible for preparing and/or maintaining systems, programming, and operations documentation, procedures, and methods including user manuals and reference manuals. Maintains a current internal documentation library. Provides or coordinates special documentation services as required. Competent to work at the highest level of all phases of documentation. May act as project leader for large jobs.

Documentation Specialist – Intermediate
Description: Under general supervision, prepares and/or maintains systems, programming, and operations documentation, including user manuals. Maintains a current internal documentation library. Competent to work on most phases of documentation.

Documentation Specialist –Associate
Description: Under direct supervision, prepares and/or maintains systems, programming and operations documentation, including user manuals. Maintains a current internal documentation library.

Technical Editor
Experience/Education: Minimum of 10 years of experience and MA/MS degree
Description: Responsible for content of technical documentation. Checks author's document for spelling, grammar, and content problems (e.g., missing instructions or sections; redundant or unnecessary sections). Accuracy of content may fall under this position or the programmer, depending on the expertise of the editor. Ensures that documents follow the style laid out in the organization's style guide. May also be responsible for maintaining the style guide. Suggests revisions to the style guide as appropriate. Editor is often a technical writer who has moved to this position.

CAD Specialist
Experience/Education: Minimum of 3 years of experience and BA/BS degree
Description: Ability to prepare various drawings that communicate engineering ideas, designs, and information in support of engineering functions directly supporting infostructure IT goals and projects. Drawings consist of parts and assemblies including sectional profiles, irregular or reverse curves, hidden lines, and small or intricate details. Requires experience in current conventional computer-aided design drafting techniques and application programs.

Graphics Specialist
Experience/Education: Minimum of 3 years of experience and BA/BS degree
Description: Responsible for graphics design and use, operation and setup of computer graphic systems for business communications. Executes graphic projects and assists in coordination of all graphic production scheduling; coordinates production support with outside contractors, as needed. Ensures that graphic projects are completed on time, within budget and to user's satisfaction. Interfaces with users to determine scope of project and best graphic medium. Trains other personnel in proper use of computer graphic equipment. Troubleshoots computer equipment problems and performs minor preventive maintenance.

Draftsman – Senior
Description: Under indirect supervision, responsible for preparing various drawings that communicate engineering ideas, designs, and information in support of engineering functions directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Drawings consist of parts and assemblies including sectional profiles, irregular or reverse curves, hidden lines, and small or intricate details. Requires experience in current conventional computer-aided design drafting techniques and application programs.

Draftsman – Intermediate
Description: Under general direction, responsible for preparing various drawings that communicate engineering ideas, designs, and information in support of engineering functions directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Drawings consist of parts and assemblies including sectional profiles, irregular or reverse curves, hidden lines, and small or intricate details. Requires experience in current conventional computer-aided design drafting techniques and application programs.

Draftsman - Associate
Description: Under immediate supervision, responsible for preparing various drawings that communicate engineering ideas, designs, and information in support of engineering functions directly supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Drawings consist of parts and assemblies including sectional profiles, irregular or reverse curves, hidden lines, and small or intricate details. Requires experience in current conventional computer-aided design drafting techniques and application programs.

ERP Business Analyst – Senior
Description: Under general direction, serves as senior subject matter expert associated with content, processes and procedures associated with ERP. Defines the detailed requirements, analyzes the business needs, and validates solutions with the client. Details requirements through the product development and other functions to support the project team. Monitors other business analysts in software development methods and processes and implementation of those methods. Evaluates development projects and assists in tailoring the development process to meet the project needs.

ERP Business Analyst – Intermediate
Description: Under general supervision, serves as subject matter expert associated with content, processes, and procedures associated with enterprise applications. Applies functional knowledge to design and customization of workflow systems that provide seamless integration for client/server applications. Writes functional requirements, develops test plans, and works with production issues.

ERP Business Analyst – Associate
Description: Under direct supervision, serves as subject matter expert associated with content, processes and procedures associated with enterprise applications. Applies functional knowledge to design and customization of workflow systems that provide seamless integration for client/server applications. Writes functional requirements, develops test plans, and works with production issues.

Business Systems Analyst – Senior
Description: Under general direction, formulates and defines systems scope and objectives based on both user needs and a good understanding of applicable business systems and industry requirements. Devises or modifies procedures to solve complex problems considering computer equipment capacity and limitations, operating time, and form of desired results. Includes analysis of business and user needs, documentation of requirements, and translation into proper system requirement specifications. Guides and advises less experienced Business Systems Analysts. Competent to work at the highest technical level of most phases of systems analysis while considering the business implications of the application of technology to the current and future business environment.

Business Systems Analyst – Intermediate
Description: Under general supervision, formulates and defines systems scope and objectives through research and fact-finding combined with an understanding of applicable business systems and industry requirements. With this knowledge, develops or modifies moderately complex information systems. Includes analysis of business and user needs, documenting requirements, and revising existing system logic difficulties as necessary. Guides and advises less experienced Business Systems Analysts. Competent to work in some phases of systems analysis and considers the business implications of the application of technology to the current business environment.

Business Systems Analyst – Associate
Description: Under direct supervision, assists in formulating and defining systems scope and objectives through research and fact-finding combined with a basic understanding of business systems and industry requirements. Includes analysis of business and user needs, documenting requirements, and revising existing system logic difficulties as necessary under direction of experienced Business System Analysts. Competent to consider most business implications of the application of technology to the current business environment.

Information Systems Training Manager
Experience/Education: Minimum of 10 years of experience and MS/PhD degree
Description: Responsible for all activities associated with education programs for both the information technology and end-user/PC personnel. Advises on administrative policies and procedures, technical problems, priorities, and methods. Assigns personnel to the various training tasks and directs their activities, reviews and evaluates their work, conducts performance appraisals, and makes decisions on personnel.

Information Systems Training Specialist – Senior
Description: Under general direction, organizes, prepares, and conducts complex training and educational programs for information systems or user personnel. May design and develop in-house programs. Maintains records of training activities, employee progress, and program effectiveness. Competent to work at the highest level of all phases of information systems training.

Information Systems Training Specialist – Intermediate
Description: Under general supervision, organizes and conducts moderately complex training and educational programs for information systems or user personnel. Maintains records of training activities, employee progress, and program effectiveness. Competent to work on most phases of information systems training.

Information Systems Training Specialist – Associate
Description: Under direct supervision, organizes and conducts basic training and educational programs for information systems or user personnel. Maintains record of training activities, employee progress, and program effectiveness.

Instructor Technical Training – Senior
Description: Under indirect supervision, responsible for provides technical expertise and instruction according to customer specifications and standards (operate, maintain, and repair in classroom or laboratory settings) supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Analyzes System and Network related information and interprets it into useable instruction/training for intended audience. Develops courseware/content in specific technical subject matter area. Provides advice to customers in system design and optimal configuration. Provides technical telephone support to customers with hardware and software problems. Also, provides technical and training input for development of training proposals. May be required to deploy and train US Forces in CONUS or OCONUS field locations.

Instructor Technical Training – Intermediate
Description: Under general direction, responsible for provides technical expertise and instruction according to customer specifications and standards (operate, maintain, and repair in classroom or

laboratory settings) supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Analyzes System and Network related information and interprets it into useable instruction/training for intended audience. Develops courseware/content in specific technical subject matter area. Provides advice to customers in system design and optimal configuration. Provides technical telephone support to customers with hardware and software problems. Also, provides technical and training input for development of training proposals. May be required to deploy and train US Forces in CONUS or OCONUS field locations.

Instructor Technical Training – Associate
Description: Under immediate supervision, responsible for provides technical expertise and instruction according to customer specifications and standards (operate, maintain, and repair in classroom or laboratory settings) supporting DoD Enterprise infrastructure and infostructure IT goals and projects. Analyzes System and Network related information and interprets it into useable instruction/training for intended audience. Develops courseware/content in specific technical subject matter area. Provides advice to customers in system design and optimal configuration. Provides technical telephone support to customers with hardware and software problems. Also, provides technical and training input for development of training proposals. May be required to deploy and train US Forces in CONUS or OCONUS field locations.

Audio Visual Fabrication Engineer - Senior
Description: Under indirect supervision, installs, pulls, terminates, and tests all audio visual (AV) type cables, connectors, and interfaces. Ability to install projections screens, plasma TVs and different types of speakers. Installation of AV systems on client sites. Read blueprints and wire AV racks. Manage AV projects with various models and makes of equipment. Has a thorough understanding and working knowledge of testing, analyses, and corrective action on systems, networks, hardware, and software in a Professional Audio/Video environment. Knows and understands all wire and connector types on all AV related cable.

Audio Visual Fabrication Engineer - Intermediate
Description: Under general direction, installs, pulls, terminates, and tests all audio visual (AV) type cables, connectors, and interfaces. Ability to install projections screens, plasma TVs and different types of speakers. Installation of AV systems on client sites. Read blueprints and wire AV racks. Manage AV projects with various models and makes of equipment. Has a thorough understanding and working knowledge of testing, analyses, and corrective action on systems, networks, hardware, and software in a Professional Audio/Video environment. Knows and understands all wire and connector types on all AV related cable.

Audio Visual Fabrication Engineer - Associate
Description: Under immediate supervision, installs, pulls, terminates, and tests all audio visual (AV) type cables, connectors, and interfaces. Ability to install projections screens, plasma TVs and different types of speakers. Installation of AV systems on client sites. Read blueprints and wire AV racks. Manage AV projects with various models and makes of equipment. Has a thorough understanding and working knowledge of testing, analyses, and corrective action on systems, networks, hardware, and software in a Professional Audio/Video environment. Knows and understands all wire and connector types on all AV related cable.

Audio Visual Programmer - Senior
Description: Under indirect supervision, designs and programs control interface touch panels for audio visual systems. Works with Design Engineer and Contracting Officer's Technical Representative to ensure a user-friendly operating environment for controlling audio/visual equipment. Provide training to users to ensure proper use and care.

Audio Visual Programmer - Intermediate
Description: Under general direction, designs and programs control interface touch panels for audio visual systems. Works with Design Engineer and Contracting Officer's Technical Representative to ensure a user-friendly operating environment for controlling audio/visual equipment. Provide training to users to ensure proper use and care.

Audio Visual Programmer - Associate
Description: Under immediate supervision, designs and programs control interface touch panels for audio visual systems. Works with Design Engineer and Contracting Officer's Technical Representative to ensure a user-friendly operating environment for controlling audio/visual equipment. Provide training to users to ensure proper use and care.

AWS PUBLIC SECTOR ACCESS POLICY

(Last Updated July 21, 2015)

This AWS Public Sector Access Policy ("**Access Policy**") governs your access to and use of the Services (as defined below) of Amazon Web Services, Inc. ("**AWS**") provided to you by your systems integrator, reseller, or services provider ("**Provider**"). It sets out the additional rules, conditions and restrictions that apply to you or the entity you represent ("**you**") for use of the Services. In this Access Policy, "**we**", "**us**", or "**our**" means AWS and any of its affiliates. Please see Section 8 for definitions of capitalized terms.

1. Use of the Services.

1.1 Generally. You are provided access to the Services by your Provider. Your use of and access to the Services are governed by the agreement between you and Provider. This Access Policy supplements the terms of such agreement and may be updated by us from time to time. AWS Service Level Agreements do not apply to your use of the Services. Your continued access to and use of the Services is conditioned on your compliance with all laws, rules, regulations, policies and instructions applicable to your use of the Services, including the Policies.

1.2 Account Keys. Provider may provide you with AWS account keys which will allow you to directly access the Services via Provider's account(s). We are not responsible for any activities that occur under these account keys, regardless of whether the activities are undertaken by you, Provider or a third party (including your employees, contractors or agents) and we are also not responsible for unauthorized access to the account.

1.3 Third Party Materials. Through the use of Provider's AWS account(s), you may have access to Third Party Materials, such as software applications provided by third parties, which are made available directly to you by other companies or individuals under separate terms and conditions, including separate fees and charges. Your use of any Third Party Materials is at your sole risk.

2. Your Responsibilities

2.1 Your Materials. You are solely responsible for the development, content, operation, maintenance, and use of Your Materials with the Services. For example, you are solely responsible for:

(a) the technical operation of Your Materials, including ensuring that calls you make to any Service are compatible with then-current application program interfaces for that Service;

(b) compliance of Your Materials with the Acceptable Use Policy, the other Policies, and the law;

(c) any claims relating to Your Materials;

(d) properly handling and processing notices sent to you (or any of your affiliates) by any person claiming that Your Materials violate such person's rights, including notices pursuant to the Digital Millennium Copyright Act;

(e) any action that you permit, assist or facilitate any person or entity to take related to this Access Policy, Your Materials or use of the Services; and

(f) End Users' use of Your Materials and the Services and ensuring that End Users comply with your obligations under this Access Policy and that the terms of your agreement with each End User are consistent with this Access Policy.

2.2 Other Security and Backup. You or Provider are solely responsible for properly configuring and using the Services and taking steps to maintain appropriate security, protection and backup of Your Materials, including using encryption technology to protect Your Materials from unauthorized access and routinely archiving Your Materials.

2.3 End User Violations. If you become aware of any violation of your obligations under this Access Policy by an End User, you will immediately terminate such End User's access to Your Materials and the Services.

3. Service Interruption.

3.1 General. We may suspend the AWS account(s) through which you access the Services immediately if we determine your or an End User's use of the Services (i) violates the terms of this Access Policy (including the Acceptable Use Policy or Service Terms); (ii) poses a security risk to the Services or any other AWS customer, (iii) may harm our systems or the systems or Materials of any other AWS customer; or (iv) may subject us to liability as a result of any of the foregoing. We will provide notice of any suspension as soon as practicable to Provider, who is solely responsible for providing any notices to you under your agreement with them.

3.2 Scope of Interruption. To the extent practicable, we will (i) suspend your right to access or use only those instances, data, or portions of the Services that caused the suspension, and (ii) limit the suspension to those accounts that caused the suspension. If commercially feasible, access to the Services will be restored once the conditions or circumstances giving rise to the suspension have been removed or corrected. Nothing in this Section 3 will operate to limit your rights or remedies otherwise available to you against Provider under your agreement with them or applicable law.

4. Proprietary Rights

4.1 Services. As between you and us, we or our licensors own and reserve all right, title, and interest in and to the Services. You have the right to use the Services solely as a licensee of Provider in accordance with this Access Policy and the agreement between you and Provider. We have no obligation to provide the Service to you under this Access Policy, so you must look exclusively to Provider and your agreement with Provider regarding such obligation. Except as expressly provided in this Section 4, you obtain no rights to the Services, the AWS Materials or any Third Party Materials.

4.2 Materials. As a part of the Services, you may have access to AWS Materials and Third Party Materials, which may be subject to additional terms and conditions (including the Terms of Use and Apache Software License). By using those materials, you are subject to such additional terms. You are solely responsible for securing any necessary approvals for the download and use of such materials.

4.3 Restrictions. Neither you nor any End User may use the Services in any manner or for any purpose other than as expressly permitted by this Access Policy and the agreement between you and Provider. Neither you nor any End User may, or may attempt to, (a) modify, alter, tamper with, repair, or otherwise create derivative works of any software included in the Services (except to the extent software included in the Services are provided to you under a separate license that expressly permits the creation of derivative works), (b) reverse engineer, disassemble, or decompile the software included in the Services or apply any other process or procedure to derive the source code of any software included in the Services, or (c) access or use the Services in a way intended to avoid incurring fees or exceeding usage limits or quotas. All rights and access granted to you with respect to the Services are conditioned on your continued compliance with this Access Policy, and you will immediately discontinue your use of the Services if you cannot comply with this Access Policy.

4.4 Suggestions. If you provide any Suggestions to us when using the Services, you hereby grant to AWS and its affiliates a perpetual, irrevocable, non-exclusive, worldwide, royalty-free right and license to reproduce, distribute, make derivative works based upon, publicly display, publicly perform, make, have made, use, sell, offer for sale, and import the Suggestions, including the right to sublicense such rights through multiple tiers, alone or in combination.

4.5 U.S. Government Rights. In accordance with Federal Acquisition Regulation (FAR) Sections 12.211 and 12.212, and Defense Federal Acquisition Regulation Supplement (DFARS) Sections 227.7202-1 and 227.7202-3, the Services are provided (as applicable) to the U.S. Government as "commercial items," "commercial computer software," "commercial computer software documentation," and "technical data" with the same rights and restrictions generally applicable to the Services. If you are using the Services on behalf of the U.S. Government and these terms fail to meet the U.S. Government's needs or are inconsistent in any respect with federal law, you will immediately discontinue your use of the Services (including any AWS Materials).

5. Representations and Warranties. You represent and warrant that (a) you and your End Users' use of the Services (including any use by your employees and personnel) will not violate this Access Policy; (b) you or your licensors own all right, title, and interest in and to Your Materials; (c) Your Materials (including the use, development, design, production, advertising, or marketing of your Materials) or the combination of your Materials with other applications, content or processes, do not and will not violate any applicable laws or infringe or misappropriate any third-party rights; and (d) your use of the Services will not cause harm to any End User.

6. Disclaimers. WE PROVIDE THE SERVICES ON AN "AS IS" BASIS TO PROVIDER. WE AND OUR LICENSORS MAKE NO REPRESENTATIONS OR WARRANTIES OF ANY KIND TO YOU, WHETHER EXPRESS, IMPLIED, STATUTORY OR OTHERWISE REGARDING THE SERVICES OR ANY THIRD PARTY MATERIALS, INCLUDING ANY WARRANTY THAT THE SERVICES OR THIRD PARTY MATERIALS WILL BE UNINTERRUPTED, ERROR FREE OR FREE OF HARMFUL COMPONENTS, OR THAT ANY MATERIALS, INCLUDING YOUR MATERIALS OR THE THIRD PARTY MATERIALS, WILL BE SECURE OR NOT OTHERWISE LOST OR DAMAGED. EXCEPT TO THE EXTENT PROHIBITED BY LAW, WE AND OUR LICENSORS DISCLAIM ALL WARRANTIES, INCLUDING ANY IMPLIED WARRANTIES OF MERCHANTABILITY, SATISFACTORY QUALITY, FITNESS FOR A PARTICULAR PURPOSE, NON-INFRINGEMENT, OR QUIET ENJOYMENT, AND ANY WARRANTIES ARISING OUT OF ANY COURSE OF DEALING OR USAGE OF TRADE.

7. Limitations of Liability. YOU MUST LOOK SOLELY TO PROVIDER AND YOUR AGREEMENT WITH THEM REGARDING ANY CLAIMS OR DAMAGES RELATED TO THE SERVICES. WE AND OUR AFFILIATES OR LICENSORS WILL NOT BE LIABLE TO YOU FOR ANY DIRECT, INDIRECT, INCIDENTAL, SPECIAL, CONSEQUENTIAL OR EXEMPLARY DAMAGES (INCLUDING DAMAGES FOR LOSS OF PROFITS, GOODWILL, USE, OR DATA), EVEN IF A PARTY HAS BEEN ADVISED OF THE POSSIBILITY OF SUCH DAMAGES. FURTHER, NEITHER WE NOR ANY OF OUR LICENSORS WILL BE RESPONSIBLE FOR ANY COMPENSATION, REIMBURSEMENT, OR DAMAGES ARISING IN CONNECTION WITH: (A) YOUR INABILITY TO USE THE SERVICES, INCLUDING AS A RESULT OF ANY (I) SUSPENSION OF YOUR USE OF OR ACCESS TO THE SERVICES, (II) OUR DISCONTINUATION OF ANY OR ALL OF THE SERVICES, OR, (III) ANY UNANTICIPATED OR UNSCHEDULED DOWNTIME OF ALL OR A PORTION OF THE SERVICES FOR ANY REASON; OR (B) ANY UNAUTHORIZED ACCESS TO, ALTERATION OF, OR THE DELETION, DESTRUCTION, DAMAGE, LOSS OR FAILURE TO STORE ANY OF YOUR MATERIALS OR OTHER DATA THAT YOU OR ANY END USER SUBMITS OR USES IN CONNECTION WITH THE SERVICES (INCLUDING AS A RESULT OF YOUR OR ANY END USERS' ERRORS, ACTS OR OMISSIONS).

8. Definitions.

"Acceptable Use Policy" means the policy currently available at http://aws.amazon.com/aup, as it may updated by us from time to time.

"AWS Materials" means Materials we make available in connection with the Services or on the AWS Site to allow access to and use of the Services, including WSDLs; Documentation; sample code; software libraries; command line tools; and other related technology. AWS Materials does not include the Services.

"AWS Service Level Agreement" means all service level agreements that we offer with respect to the Services and post on the AWS Site, as they may be updated by us from time to time.

"AWS Site" means http://aws.amazon.com and any successor or related site designated by us.

"Documentation" means the developer guides, getting started guides, user guides, quick reference guides, and other technical and operations manuals, instructions and specifications for the Services currently located at http://aws.amazon.com/documentation, as such documentation may be updated by us from time to time.

"End User" means any individual or entity that directly or indirectly through another user: (a) accesses or uses Your Materials; or (b) otherwise accesses or uses the Services through you.

"Materials" means software (including machine images), data, text, audio, video, images or other content.

"Policies" means the Acceptable Use Policy, the Terms of Use, the Service Terms, all restrictions described in the AWS Materials and on the AWS Site, and any other policy or terms referenced in or incorporated into this Access Policy.

"Services" means, collectively or individually (as applicable), the web services made commercially available by us to Provider for use under this Access Policy, including (as applicable) those web services described in the Service Terms.

"Service Terms" means the rights and restrictions for particular Services located at http://aws.amazon.com/serviceterms, as they may be updated by us from time to time.

"Suggestions" means all suggested improvements to the Services or AWS Materials that you provide to us.

"Terms of Use" means the terms of use located at http://aws.amazon.com/terms/, as they may be updated by us from time to time.

"Third Party Materials" means Materials made available to you by any third party on the AWS Site or in conjunction with the Services.

"Your Materials" means Materials you or any End User (a) run on the Services, (b) cause to interface with the Services, or (c) upload to the Services or otherwise transfer, process, use or store in connection with the Services.
