

# Medical Payer Identification

Through Medical Payer, Symphony Health invented the ability for clients to perform payer analytics on their medically administered products.

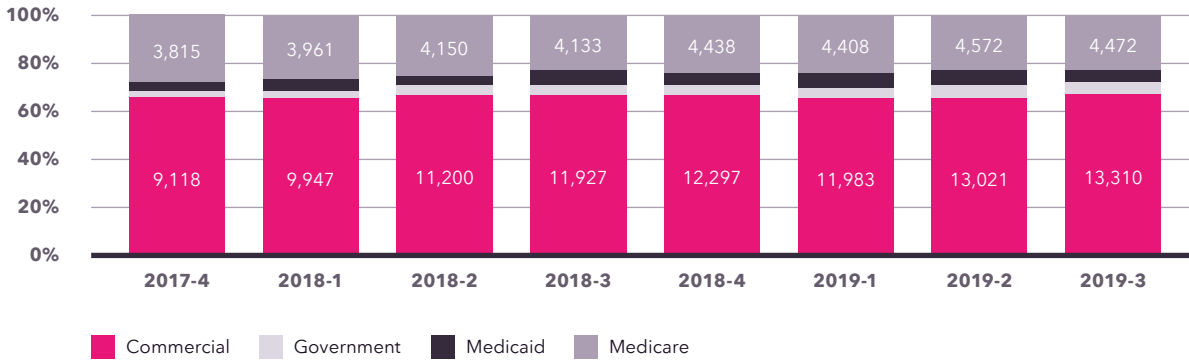

## The Most Robust Medical Plan Dimension

**Leveraging patient-linked information to increase payer granularity, Symphony delivers the most robust medical plan dimension available.**

Mx claims do not utilize standardized payer detail creating ambiguous and inaccurate analytics. Symphony Health utilizes a proprietary process to scrub the Medical Payer name and align it to a standard plan dimension. Leverage our proprietary unmasking process to see payer level granularity for product and procedure claims flowing through a medical benefit.

**Payer insights for Mx activity**  
With the addition of Medical Payer, medical claims can now be analyzed at the individual payer level for an accurate assessment of the market

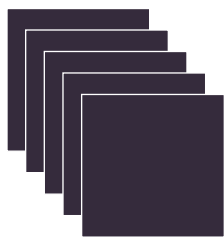

**Mx Payment Type trending**  
Improved visibility and assignment of payment type is also created through the medical payer process, providing a more accurate view of line of business for medically administered products

## Parent-Child Medical Payer Dimension

The introduction of Medical Payer’s Parent-Child dimension offers even further granularity into the payers reimbursing medically administered products. Clients now have the flexibility to aggregate affiliated lines of business under national payers for a comprehensive view of the health plan.

The Parent-Child dimension transforms how payers and their affiliates are captured and reported

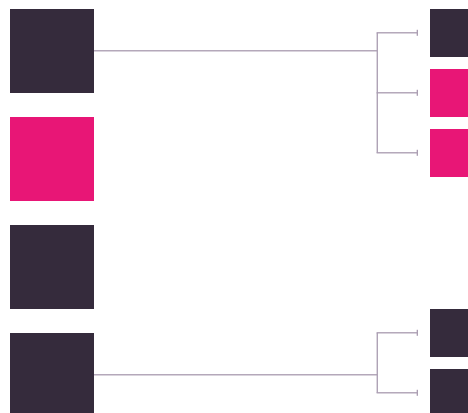

**BEFORE: ONLY ONE LEVEL OF NATIONAL PAYERS AVAILABLE**

**NEW! AN EXPANDED TWO LEVEL PAYER DIMENSION AVAILABLE TO MORE EFFECTIVELY REFLECT THE RELATIONSHIPS WITHIN KEY HEALTH PLANS**
