

Clinical Diagnostic Services

At PRA Health Sciences, our global teams understand that diagnostic studies are different from drug development projects and require designs customized to their unique challenges. As experts in the diagnostic and biomarker space, we have decades of experience managing programs of all sizes and complexities. Furthermore, our scientific and therapeutic experts collaborate to identify the right patients at the best sites to ensure the highest quality data sample collection.

Results for Clinical Diagnostic Programs

PRA specializes in developing comprehensive and cost-effective solutions for all phases of diagnostic research: discovery, development, validation, and commercialization/reimbursement.

We understand the importance of high-volume, real-world sites; robust sample integrity; and rapid, seamless sample processing.

Our teams collaborate with clients to tailor strategies for:

Comprehensive site identification and qualification.

Rapid study start-up using expedited processes.

Streamlined site management and monitoring.

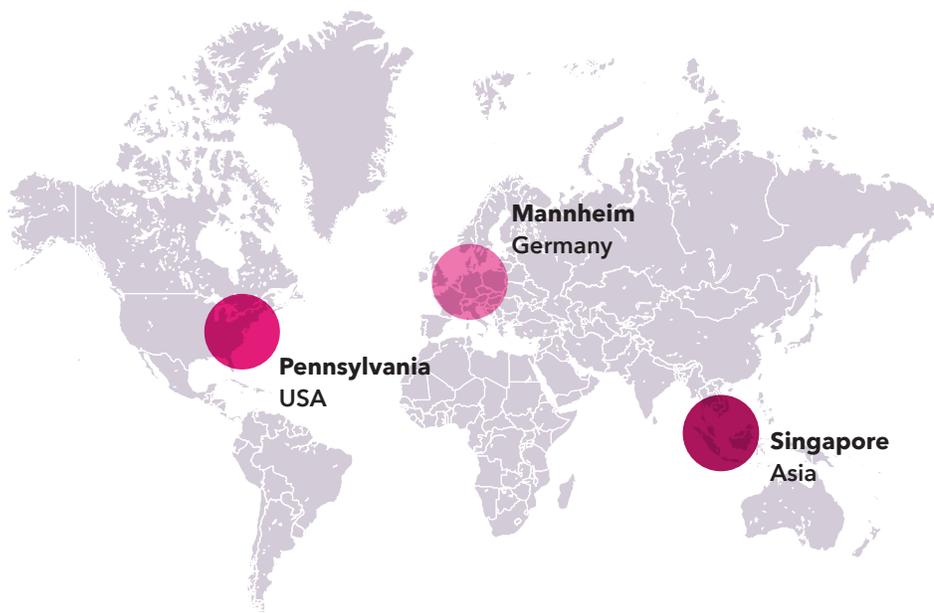

Efficient sample management and logistics.

High-quality data collection.

Our approach to diagnostic research is flexible – we support small and large global sample collections.

PRA's scientific experts use analytics to proactively follow the unique chain-of-custody processes for each type of sample and to quickly address issues and expose any trends of non-viability.

Our Global Study Coordinating Centers™ (SCC™) comprise multi-lingual site management associates (SMAs) covering more than 60 countries.

Meaningful Global Presence

PRA is a global leader in the clinical diagnostic space, employing multi-lingual therapeutic and operational professionals who support diagnostic research projects throughout the Americas, Europe, and Asia Pacific. Our experts leverage their knowledge of their country's local regulatory challenges, languages, and cultural customs to enhance study timelines, increase focus on patient outcomes, and optimize clinical sample quality.

Wherever our experts operate, they understand the importance of diagnostic research for the greater good of healthcare, and they work tirelessly to provide the highest quality oversight and strategic planning for our clients. For every study, our goal is to optimize efficiency while ensuring a positive and rewarding study experience for physicians and their patients.

We don't treat diagnostic studies the same as drug development studies - we offer specialized expertise and unmatched focus every time.

Proven Operational Models = Key Client Benefits

With our proven centralized monitoring and data-driven approaches, we're fully equipped to manage your diagnostic program no matter the size, scope, or number of sites. Thanks to these capabilities, our clients benefit from:

Better data quality and sample viability. Our unique operational model consolidates, automates, and reduces manual effort.

Maximized site participation. We employ a fully harmonized, integrated approach for each diagnostic program.

Robust patient participation. PRA's data-driven, evidence-based methodology enables our teams to select sites where known patient populations exist.
