# PRA GOVERNMENT SERVICES

# PRA GOVERNMENT SERVICES

As a top 5 CRO, PRA Health Sciences offers our services as a contractor for US Government (USG) contract-funded projects and as a commercial procurement vendor for USG grant-funded projects. Since 2012, we have partnered with 13 clients on 25 USG-funded projects to tackle public health issues, such as emerging infectious diseases, and to enhance care and treatments for USG civilian and military agencies. PRA is committed to providing consistent, transparent approaches that ensure high-quality outcomes for our USG-funded partners.

## PRA COMPREHENSIVE CLINICAL STUDY EXPERIENCE

\*INCLUDES COMMERCIAL AND GOVERNMENT EXPERIENCE

## EXPERIENCE

We offer transparency and collaboration on research that is vital to global health, as well as the health and well-being of members of the US military. PRA conducts clinical trials across all therapeutic areas, including experimental vaccines targeting infectious diseases, such as Zika and chikungunya viruses in healthy adults and in high risk areas. PRA supports several federally funded projects across all business units. To date, our federally funded studies have focused on research in vaccines, infectious diseases, and pain.

## EXPERTISE

Our research experience spans several civilian and military agencies including:

- Department of Health and Human Services (DHHS) through the National Institutes of Health (NIH) and Biomedical Advanced Research and Development Authority (BARDA)
- US Army Medical Materiel Development Activity (USAMMDA)
- Walter Reed Army Institute for Research (WRAIR)
- US Department of Veterans Affairs

We provide full-service CRO support covering project management; clinical operations and monitoring; laboratory services; vendor management; study training and logistics; data management; and biostatistical analysis and reporting.

PRA's infrastructure of global processes, systems, and expertise are significant assets and comprise just a few of our key differentiators within our model that complies with the unique requirements of USG-funded research—from contracting and procurement through operational execution.

## INNOVATION

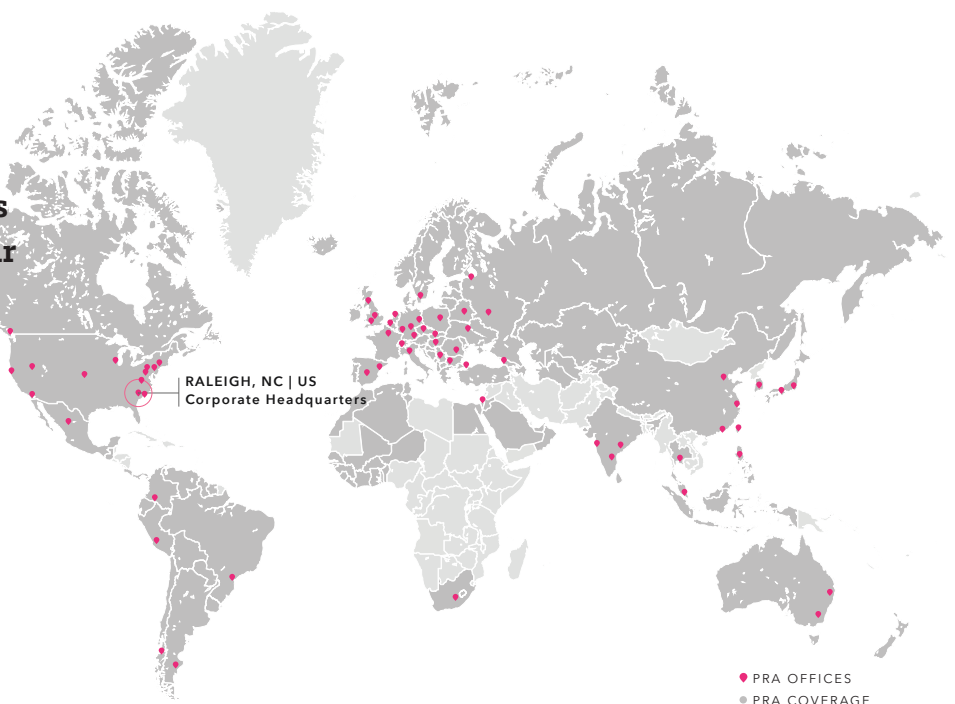

PRA's strategic approach combines state-of-the-art technologies and data-driven decision making to transform the drug development process.

- **Robust data lake** accessed and analyzed by our data scientists and therapeutic experts.
- **Proprietary methodologies** for study feasibility, protocol validation, and site selection to optimize study start-up.
- **Project Web portal** facilitates secure data sharing.
- **Unique adaptive monitoring model** enhances data quality and operational efficiencies.

## Case Study

PRA has provided key services on the development of a smallpox vaccine for a commercial client, in part with federal funds from the DoD and DHHS. Following completion of the trial, the federal government ordered a bulk supply of the commercial product to retain as part of the US Strategic National Stockpile (SNS).

PRA is committed to working with our USG clients to improve public health and bring new interventions to populations in greatest need. Our broad therapeutic and operational expertise, combined with our infrastructure and understanding of the unique requirements of federally funded research, allows us to operationalize compliant government programs across all study phases.

● PRA OFFICES  
● PRA COVERAGE

Improving the lives of millions of people throughout the world is no small task and requires a CRO partner who has the expertise to execute clinical research on a global scale. As an experienced leader in USG-funded research, PRA combines insight with agility to develop a custom, end-to-end solution to operationalize your program anywhere in the world. Together, with our mutual commitment to excellence and determination to create a better world, no task is too great to achieve.
