Soulseek

Windows XP service pack 2/Windows Vista users: microsoft has instated a limit on the number of concurrent connection attempts in these versions of windows which may adversely affect the performance of the soulseek client. for information and solutions to this problem, please refer to [the following forum thread](#).

[see here for instructions on how to migrate your settings from 156 to 157 NS](#)

There appear to be many reports of a DLL installed along with the Advanced Systemcare program interfering with the operation of the Soulseek client and its ability to connect to the server. As far as we know, [LSP-Fix](#) should be able to fix the problem.

Latest NS (new server) client version

[157 NS 13e](#)

see the [changelog](#) for information about changes and additions.

the NS (new server) client offers numerous optimizations and bug fixes, and a fair number of new features over the original client. both NS and original clients may be installed and run side by side.

regarding privileges: if you intend to donate, and are interested in receiving privileges on both the original and new servers, please make sure you have the same username registered on both servers before donating. if you are having any difficulties regarding privileges, please file a privileges problem report using the Options->Privileges Status->Report privileges problem menu option in the client.
