Version 2.1.6

Mac OS 10.5.8+

New

What's New In 2.1

New features that we've added in Notify 2.1.

Mail Accounts

Notify supports Gmail, MobileMe, and more. All in a beautiful tabbed interface.

Notifications

Notify's notifications are easily configurable to meet your needs.

Full Preview

Easily preview entire messages right on your desktop, without a mail client.

Mark Read, Delete, Move

Mark messages as read, delete them, or move them - quickly and easily.

Send & Reply

Reply to messages and send new ones without needing a full mail client.

Notify 2.1

If you access your email in a browser, you'll love Notify. Notify is an awesome email notifier for Mac OS X. It fits seamlessly into your menubar, only vying for your attention when you have new mail. Notify supports mutiple accounts, including Gmail/Google Apps, MobileMe, and Rackspace Email. All in a beautiful interface.

Notify Start Time

Time to start Notify with two accounts. Each with 5 unread messages.

Notify 2.0

7.9s

Notify 2.1 3.5s

New

Huge performance improvements.

We've rewritten a large portion of Notify's backend. What does this mean to you? **Faster updates.** In some cases, Notify is twice as fast.

New messages take less time to download, and updating multiple accounts is now an order of magnitude faster than before. In fact, updating four accounts is now just as fast as updating one.

The graph on the left represents the time it takes Notify to start up, fetch your messages, and notify you of them. This is almost twice as fast in 2.1.
