Mail Act-On 2.1.11
 April 11, 2011

[Get Update](#)

Mail Act-On

Organization at your Fingertips

Reduce the effort required to manage your email

Perform multiple actions on messages in a fraction of a second and eliminate time consuming and error prone manual organization such as drag and drop message filing.

Process multiple messages simultaneously

A single keystroke can apply multiple rules on your selected messages. Different actions will be taken depending on the characteristics of each message, letting you clear your inbox even faster.

Organize more than just your inbox

Outbox rules give you the power to apply organization actions to messages you send.. Apply Act-On rules to related messages to organize older messages, no matter where they are located.

More reasons to love Mail Act-On

Flexible and efficient interface

Mail Act-On's interface is always a keystroke away when you need it, and it quickly disappears when you are finished. Alternatively you can lock it open to organize multiple messages in rapid-fire succession

Move messages by keystroke only

Mail Act-On's interface includes the ability to move or copy messages to any folders by keystroke, even if you don't have an Act-On rule for a particular mailbox.

Version 2.1 introduces preferred mailboxes. You can now quickly configure your number keys to move messages to specific mailboxes for even faster filing of messages.

Easy rule configuration

Act-On integrates its Outbox and Act-On rules seamlessly into Mail's rule editor. If you have created a regular Mail rule, you can create an Act-On rule.

Quickstart Guide

Tutorials

Mail Act-On is very simple to use, just hit one or two keystrokes to organize your mail. But don't let this simplicity deceive you. You can use Mail Act-On to build very sophisticated rule based systems that will help you automate your email organization. The following tutorials guide you through a few of these techniques.

Undo rules

Go ahead, make mistakes. Mail Act-On can undo your last rule application, no matter how many messages were affected or how complex the actions were.

Preview, don't read

Mail Act-On lets you control when you mark a message read. Set it to immediately, after a delay, or never for better control over items in your inbox.

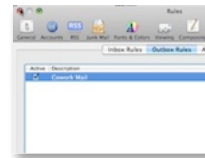

Works with all Mail accounts

Mail Act-On will work with all types of messages and accounts: POP, IMAP, GMail, RSS items and notes.

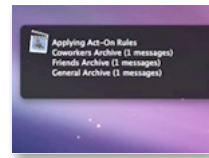

Integrates with other Mail plugins

Mail Act-On works with other Mail plug-ins such as MailTags and MiniMail to improve organization and efficiency of your email experience.
