## DropCopy

Easily and quickly send files and folders to multiple destinations across your LAN by simply dragging files onto recipients in a popup window.

The easiest way to get things from one place to another quickly without dialogs, passwords or confirmations. DropCopy is FREE for personal use (up to 3 machines on a network) and \$25 for larger networks but donations are always welcome.

Macworld says: "It's become one of the first things I install on any new Mac"  
– [read the full review here.](#)

DropCopy is designed to function as intuitively as possible: simply launch it on 2 or more computers (or iOS devices) and wait for the dropzone to appear. Then drag a file to the dropzone and drop it on your chosen destination. Watch the short video below to see DropCopy in action:

### Which version do I need?

DropCopy can be used in a few different scenarios.

• *Individuals with 1–3 devices:* simply download the free version from either the App Store or via the download link below.

• *Individuals or households with 1–10 devices:* purchase the Pro version from the App Store, which is tied to an Apple ID. Every machine that is linked with that Apple ID can download the pro version for no extra cost.

• *Large households or small businesses:* a site license will cover an unlimited number of simultaneous devices. Note that a site license can not be purchased or applied via the App Store, but rather via the link below.

**Direct Download (Universal Binary; runs on Mac OS X 10.4, 10.5, and 10.6)**
