A Smart Print Manager Helps with Budget Limits

O&K Print Watch is a server side print manager. This print audit tool lets users control print jobs, paper usage and collect statistics from the print servers. With O&K Print Watch you can define printing quotas for your users that depend on a number of different printing limits. O&K Print Watch creates a wide array of reports, which are available for viewing even from a web browser. These features give users full

control over any printer in a home or corporate network.

Now you can specify a printing "budget" by setting limits on the number of pages that can be printed or the total cost of a printed document. Let's say, for example, your employees are printing too many images on an expensive color laser printer. You can set up a printing quota to limit printing based on the number of pages in a document for this printer. Or, you can specify keywords and no document with these keywords in its name will ever be printed. If you would like to know what was in the document named "Doc1.doc", you can select the option that saves a print job as an image and open an image of a printed document in a built-in image viewer.

Monitor You Printing, Manage All Printers in Your Network and Reduce Printing Cost
