## Security updates are available on ISO-9660 DVD5 image files from the Microsoft Download Center

### System Tip

This article applies to a different operating system than the one you are using. Article content that may not be relevant to you is disabled.

### INTRODUCTION

This article describes the ISO-9660 DVD5 image files that contain security updates for Microsoft Windows. This article contains a link to the current ISO image file that is available on the Microsoft Download Center.

### MORE INFORMATION

Microsoft now releases ISO-9660 DVD5 image files that contain all the security updates that are released on the Windows Update website. The ISO image files are released at the same time as security updates are released on the Windows Update website.

The ISO image files are intended for corporate administrators who:

- Manage large multinational organizations.
- Must download multiple individual language versions of each security update.
- Do not use an automated solution such as Microsoft Windows Server Update Services (WSUS).

By using the ISO image files, administrators can download multiple updates in all languages at the same time.

### Obtain the latest ISO image file from the Microsoft Download Center

## Use ISO image files

An ISO-9660 image file is an exact representation of a CD or DVD that includes the content and the logical format. The most common use of an ISO image file is to record, or "burn," the image file to a recordable CD or DVD. This operation creates a copy of the original disc that includes the file name and volume label information. You can open ISO image files and copy their contents to a local folder. This functionality resembles that of ZIP files. Additionally, you can mount and access ISO image files as a virtual device.

**Note** To create a usable CD-ROM from an ISO image file, you must use third-party CD-ROM writing software. For more information about how to create the CD-ROM or about how to mount an ISO image file, see the documentation that is included with the third-party CD-ROM writing software.
