**Downloading and Installing**

The current Webmin distribution is available in various package formats for download from:

Unix tar/gzip format

<http://prdownloads.sourceforge.net/webadmin/webmin-1.570.tar.gz> 15.1 MB

RPM suitable for Redhat, Fedora, CentOS, SuSE or Mandrake Linux

<http://prdownloads.sourceforge.net/webadmin/webmin-1.570-1.noarch.rpm> 16.3 MB

Debian package suitable for Debian, Ubuntu or other derived Linux

http://prdownloads.sourceforge.net/webadmin/webmin_1.570_all.deb 14.8 MB

Source RPM suitable for Redhat, Fedora, CentOS, SuSE or Mandrake Linux

<http://prdownloads.sourceforge.net/webadmin/webmin-1.570-1.src.rpm> 15.1 MB

Solaris package format

<http://prdownloads.sourceforge.net/webadmin/webmin-1.570.pkg.gz> 14.8 MB

ZIP format suitable for Windows

<http://prdownloads.sourceforge.net/webadmin/webmin-1.570.zip> 19.3 MB

Minimal version of Webmin, Unix tar/gzip format

<http://prdownloads.sourceforge.net/webadmin/webmin-1.570-minimal.tar.gz> 1.9 MB

A Webmin [package for Gentoo](#) is now part of their tree, and can be installed with the command :

```
emerge webmin
```

You can also download [recent versions of Webmin](#). Check out the [change log](#) for a list of new features in this version and in older releases.

PGP Verification

The [PGP key](#) that the RPM packages for versions 1.040 and above were signed with is also available, so that you can verify their integrity. Just add it to your GnuPG or PGP keyring and run the command `rpm --checksig webmin-1.570-1.noarch.rpm`. If you are using RPM version 4 or above, you will need to import the key into RPM's key database with the command `rpm --import jcameron-key.asc`. Otherwise, you can run `gpg --import jcameron-key.asc` as root.

The [PGP signature](#) for the latest tar/gzip version of Webmin is also available so that you can verify the tar.gz file with the command `gpg --verify webmin-1.570.tar.gz-sig.asc webmin-1.570.tar.gz`.

For Debian packages, you can also get the [PGP signature](#) for the latest version, so that you can verify the package with the command `gpg --verify webmin_1.570_all.deb-sig.asc webmin_1.570_all.deb`.

MD5 Verification

To verify that you have downloaded Webmin fully and correctly, you can use the command `md5sum` on the RPM, Debian package or TAR file, and compare it against those listed below :

Filename	MD5 Checksum
webmin_1.570_all.deb	8aa5ade2748c995734bf9262734e547e
webmin-1.570-minimal.tar.gz	e84529b66ce9cf78a829efe3c8c9baf2
webmin-1.570-1.noarch.rpm	b739e7e031f5dcc0c89684cf1aa69065
webmin-1.570-1.src.rpm	274e18277baa1f3324a97333345e7c9b
webmin-1.570.pkg.gz	7eba4524fa3f4f3057e96eede9614e17
webmin-1.570.tar.gz	20b4f488637366c39458b9b93162eff3
webmin-1.570.zip	f600ce6dc713dc9277efb13fb1673369

Minimal Package

The minimal version of Webmin contains only the core API and programs, and a few modules required for its basic operation. Most modules and all themes have been left out, but can be easily added later. It can be useful if you only need some of the programs functionality, and don't want to download the entire multi-megabyte package. The 1.570 minimal tar.gz distribution can be downloaded from [webmin-1.570-minimal.tar.gz](#)

Additional documentation is available to assist with the installation of Webmin and other required packages on the following operating systems : [Sun Solaris](#), [HP/UX](#) and [Apple MacOS X](#).

Latest Version Links

If you want a URL that always downloads the latest version of Webmin, you can use one of the following :

Unix tar/gzip format

<http://www.webmin.com/download/webmin-current.tar.gz>

RPM suitable for Redhat, Fedora, CentOS, SuSE or Mandrake Linux

<http://www.webmin.com/download/rpm/webmin-current.rpm>

Debian package suitable for Debian, Ubuntu or other derived Linux

<http://www.webmin.com/download/deb/webmin-current.deb>

Solaris package format

<http://www.webmin.com/download/solaris-pkg/webmin-current.pkg.gz>
