RRDtool Download

You can download RRD tool from several places:

Primary Distribution Point

- [Stable Release](#)
- [Development SnapShots](#)

You might want to read the [build instructions](#) for inspiration on where to go after downloading the source.

Binary Distributions

- AIX by [Zoran Majcenic](#) -- <http://www.inet.hr/zmp/ibm/rrdtool>
- HP-UX by [Stoyan Angelov](#) -- <http://www.filibeto.org/~aduritz/truetime/rrdtool/>
- Solaris OpenCSW <http://www.opencsw.org/packages/rrdtool>
- Debian Linux <http://packages.debian.org/rrdtool>
- T2 SDE Linux <http://www.t2-project.org/packages/rrdtool.html>
- RHEL, CentOS, Fedora, Scientific Linux [William R. Lorenz](#) -- <http://packages.express.org/rrdtool/>
- Redhat/Fedora <http://dag.wieers.com/packages/rrdtool/>
- Native Windows 1 [local](#)
- Native Windows 2 <http://www.gknw.net/mirror/rrdtool/>
- NetWare <http://www.gknw.net/mirror/rrdtool/>
- Cygwin Windows <http://www.cacti.net/downloads/rrdtool/win32/>

Language Bindings

The bindings for perl, tcl, ruby and python are part of the rrdtool distribution. Here is a list of others:

- [PHP bindings to the rrd tool system](#) by Miroslav Kubelík

Anonymous SVN for RRDtool

RRDtool source is stored in a subversion repository with anonymous access.

Browse the RRDtool SVN via [RRDtrac](#). Or if you want todo more than look ...

```
svn ls svn://svn.oetiker.ch/rrdtool/
```

tells you what is in the repository. Development will happen in the "trunk" directory. Every major release gets an entry in the "branches" tree as soon as development in trunk starts up again ... normally after a bit of a settling periode, and every released version get added to the "tags" tree.

To get the latest changes from the current trunk use this:

```
svn checkout svn://svn.oetiker.ch/rrdtool/trunk/program
```

Network Monitoring
Diagnose & Resolve Network Issues.
Download Free Trial!
www.nimsoft.com/network-monitoring

AdChoices

```
mv program rrdtool-trunk
cd rrdtool-trunk
./autogen.sh
```

If you checkout code from the subversion repository, you will find that the **configure** script is missing. The last line in the example above should have taken care of this problem. If not, it could be that you are missing automake, autoconf and libtool installations on your system.

Make sure to run `./configure --enable-maintainer-mode` prior before 'makeing' modified source, to ensure that all bits get properly rebuilt.

If you fix a bug, I would love to see the output of '**svn diff**'.
