

Downloading and installing Weka

- **Snapshots**

Every night a snapshot of the Subversion repository is taken, compiled and put together in ZIP files. For those who want to have the latest bugfixes, they can download these snapshots [here](#).

- **Stable book 3rd ed. version**

Weka 3.6 is the latest stable version of Weka, and the one described in the 3rd edition of the **data mining book**. This branch of Weka receives bug fixes only (for new features in Weka see the developer version). There are different options for downloading and installing it on your system:

- **Windows x86**

Click [here](#) to download a self-extracting executable that includes Java VM 1.6
(weka-3-6-6jre.exe; 36.9 MB)

Click [here](#) to download a self-extracting executable without the Java VM
(weka-3-6-6.exe; 22.2 MB)

These executables will install Weka in your Program Menu. Download the second version if you already have Java 1.5 (or later) on your system.

- **Windows x64**

Click [here](#) to download a self-extracting executable that includes 64 bit Java VM 1.6
(weka-3-6-6jre-x64.exe; 37.0 MB)

Click [here](#) to download a self-extracting executable without the Java VM
(weka-3-6-6-x64.exe; 22.2 MB)

These executables will install Weka in your Program Menu. Download the second version if you already have Java 1.5 (or later) on your system.

- **Mac OS X**

Click [here](#) to download a disk image for OS X
(weka-3-6-6.dmg; 28.8 MB)

- **Other platforms (Linux, etc.)**

Click [here](#) to download a zip archive containing Weka
(weka-3-6-6.zip; 22.4 MB)

First unzip the zip file. This will create a new directory called weka-3-6-6. To run Weka, change into that directory and type

```
java -jar weka.jar
```

Note that Java needs to be installed on your system for this to work. Also note, that using `-jar` will override your current CLASSPATH variable and only use the `weka.jar`.

- **Developer version**

This is the trunk of Weka and continues from the stable-3-6 code line. It receives both bug fixes and new features.

- **Windows x86**

Click [here](#) to download a self-extracting executable that includes Java VM 1.6
(weka-3-7-5jre.exe; 36.8 MB)

Click [here](#) to download a self-extracting executable without the Java VM
(weka-3-7-5.exe; 22.2 MB)

These executables will install Weka in your Program Menu. Download the second version if you already have Java 1.6 (or later) on your system.

- **Windows x64**

Click [here](#) to download a self-extracting executable that includes 64 bit Java VM 1.6
(weka-3-7-5jre-x64.exe; 36.9 MB)

Click [here](#) to download a self-extracting executable without the Java VM

(weka-3-7-5-x64.exe; 22.2 MB)

These executables will install Weka in your Program Menu. Download the second version if you already have Java 1.6 (or later) on your system.

- **Mac OS X**

Click [here](#) to download a disk image for OS X (weka-3-7-5.dmg; 28.4 MB)

- **Other platforms (Linux, etc.)**

Click [here](#) to download a zip archive containing Weka (weka-3-7-5.zip; 22.4 MB)

First unzip the zip file. This will create a new directory called weka-3-7-5. To run Weka, change into that directory and type

```
java -jar weka.jar
```

Note that Java needs to be installed on your system for this to work. Also note, that using `-jar` will override your current CLASSPATH variable and only use the `weka.jar`.

- **Old versions**

All old versions of Weka are available from the [Sourceforge website](#).
