Description

Defraser is a forensic analysis application that can be used to detect full and partial multimedia files in datastreams. It is typically used to find (and restore) complete or partial video files in datastreams (for instance, unallocated disk space).

TreeGrid Web Gantt Chart

Fully customizable, fully interactive, auto and manual scheduling, 1000s tasks
Tasks, milestones, flags, dependencies (ss,fs,ff,lag; floats), constraints
Percent completion, price calculation, critical path, holidays, smooth zoom
Resources assigning, resource charts, any custom columns, custom bars
Sorting, filtering, grouping, tree, printing / PDF, paging, AJAX, localization

The fastest Gantt chart with the richest features set on Internet
