ThreeDify Designer 5.2.2 just released! The new version adds:

- Powerful parts and assembly grouping feature with a drag & drop interface.
- Significant rendering optimization for complex scenes: the performance of object creation and most editing operations are now independent of scene complexity. In a complex scene with large # of objects, they perform just as fast as in a small scene.

You can also download from the following site:

Notes:

- ThreeDify Designer has been awarded BrotherSoft Editor's Pick:
