## Free Security Diagnosis

- **Dual Core Scanning Technology** – CyberDefender’s Early Detection Center takes every new file and runs it through two distinct scanning engines.
- **Argus Network** – The Argus Network uses the power of the community through a proprietary peer-to-peer relay network protecting users against Internet threats faster than most competing technologies.
- **Simplified User Interface** – Allows for easier product navigation than previous versions.

- **Antispyware Protection** – Detects and removes dangerous spyware and adware from your computer.
- **Antivirus Protection** – Detects and removes viruses from your computer.
- **Microsoft Updates Monitor** – Detects if the PC has the latest Microsoft updates and if not, helps to install them.
- **Cookie Monitor** – Detects what cookies are capturing personal information on the PC and allows the user to remove them.
- **Firewall Monitor** – Scans to see if a Firewall is enabled and protecting the PC.
- **Privacy Monitor** – Monitors what passwords and privacy data are being stored in the Internet Explorer browser and allows the user to remove them before threats can capture them.
