**CPUload 1.0**  
Watch your  
processor!

## Fun and Productivity

New and Updated  
Products Available.

**Adventure 2.1**  
Computer History  
Reloaded.

**NEWS:** A release candidate of IPSecuritas for Mac OS Lion users is available for download [here](#).

### CPUload 1.0

CPUload offers a simple and light-weight possibility to have the state of your CPU readily available in your menu bar. If the load of your CPU looks suspiciously high, have a closer look at what is causing the load by launching Apple's Activity Monitor with a single mouse click. Activity Monitor lets you look at the process details and you may terminate the rogue process if required. More information about CPUload can be found [here](#).

### Adventure 2.1

Before there was Doom, Ultima, Rogue, or even Zork, there was... Adventure.

There were other text computer games before Adventure, such as STARTREK and WUMPUS, but this was the first of its kind; the first text "interactive fiction" game. It may seem outdated and quaint by today's standards, sort of like seeing the Wright brothers' original flyer parked next to a Boeing 747, but many of us remember it fondly. More information about Adventure can be found [here](#).

#### Adventure

Adventure is the MacOS X version of the classic text adventure.

#### Bubble Pop

Bubble Pop is a simple board game, still having it's fair addiction risk.

#### IPSecuritas

IPSecuritas runs your secure VPN tunnels through the Internet with IPsec.

#### MoofMenu

**Universal Binary!**  
MoofMenu brings you back some MacOS 9

#### Nuntius

Nuntius is the MUD client for MacOS X.

#### WinShortcutter

**New version 3.2 out**  
WinShortcutter integrates you better into

convenience.

Windows  
environments.
