Default Folder X

Save your files effortlessly and open your folders instantly. Default Folder X makes Mac OS X's Open and Save dialogs work as quickly as you do.

Custom keyboard shortcuts put your favorite and recent folders at your fingertips. Pop-up menus let you navigate your folders and open Finder windows.

I've been using Default Folder X for about a week now and it's one of those programs that I wonder how I lived without for so long. Before I was constantly clicking through directories every time I wanted to open, save or attach a file. Now I do almost everything in just a few clicks. The interface is elegant and the program effortlessly integrated into my work flow.

Reviews and Comments

Directory assistant

You can access the contents of your recent, favorite, and open folders right from Default Folder X's toolbar. Its hierarchical pop-up menus expand as you mouse over them, letting you navigate your folders to get to your files. To work faster, you can assign a keyboard shortcut for all of your favorite folders. If an Open and Save dialog isn't open, then you can use Default Folder X's menu bar, Dock icon, or keyboard shortcuts.

Real time saving

If you're constantly saving things inside the same folder, Default Folder X can remember that folder for you. You can even set a different default folder for each application you use. That way, you'll already be in the right folder when you're working.

Finder management

Have you ever wanted to save a file to an open Finder window? Default Folder X lets you open up or save to any Finder window with a single click. It also lets you get info on, rename, and delete existing files, putting the Finder's power in every Open and Save dialog.

Instant Recall

To help you quickly return to folders you've recently used, Default Folder X remembers them for you. It can even rebound to the last file you used in all your recent folders. With Default Folder X, you'll never forget where you put something.

Spotlight on the spot

Mac OS X delivers amazing search capabilities with Spotlight, but adding your own search keywords requires a trip to the Finder's Get Info window or to an application like **Tags**, **Fresh**, or **Tag Folders**. No more! Default Folder X lets you add Spotlight keywords, OpenMeta tags, and Finder labels on the spot, while you're still in the Save dialog. It even remembers keywords you've used before and automatically completes them as you type.

Information central

Leopard delivers amazing previews with QuickLook, but in Open dialogs they're small and you can only see them in column view. With Default Folder X you get previews below every Open dialog, expanded to fill the available space. Need to see more detail? Click on the image and it zooms up to full size.

And if you'd rather have words instead of pictures, Default Folder X delivers those details too. The file's size, the date you created and modified it, the Finder label, Spotlight comments, OpenMeta tags, access permissions - they're all there too.

As a long-term Mac user, I have installed demo software beyond count. Yours is one of the few that I've seen the worth in investing in.
