Advanced Anti Spy

Advanced Anti Spy is a powerful, easy to use anti-spy program that prohibits operation of any keylogger, either currently in use or in development. Once installed, our anti-spy software will protect your privacy immediately and constantly.

The most scary and dangerous feature of all spy software is the ability to record a computer user's keystrokes. While you are typing out your password

and credit card details online, a hacker could be recording your

every keystroke on his computer with the right spy software. So, keystroke-monitoring is the core activity of any spy software. Without this ability, any spyware would be absolutely useless.

[Read more about keyloggers.](#)

Advanced Anti Spy is the result of extensive mathematical research and modeling carried out by our specialists. The unique protection algorithm of Advanced Anti Spy is based on operating principles common to all types of keystroke monitoring programs, both known and unknown, currently in use or in development. Advanced Anti Spy prohibits operation of the most dangerous feature of any spy software: recording of a computer user's keystrokes. So Advanced Anti Spy works like personal firewall.

Unlike other anti-spy software currently available worldwide, Advanced Anti Spy does not require spyware database updates. What is more, you will save a lot of time because no hard disk or memory scanning is necessary. Once installed, Advanced Anti Spy will protect your privacy immediately and constantly.

There are two products editions today: **Advanced Anti Spy Pro** and **Advanced Anti Spy**.

What is the difference between the product editions?

Both editions provide the same level of protection. However **AAS Pro** is more flexible product than **AAS**.

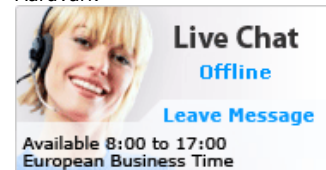

AAS blocks any attempts at keystroke monitoring for absolutely all applications, both trusted and malicious. **AAS** has the ability to use a flexible set of rules that allow keystroke monitoring for trusted programs and prohibit it for malicious applications.

Keystroke monitoring could be used by many applications. Trusted applications may use
