Some words from our happy customers

"We are very, very happy with OroTimesheet, it's my best buy ever! ...I evaluated for more than a year almost everything on the market and yours is by far the best solution I came across."

George Winet from ABL-Systems N.V., Netherlands Antilles

"We made extensive research on timesheets before we chose OroTimesheet and I must say that the rest of what we have seen was not worth it's money."

Hans-Christian Schruff from Valentum Consulting Group, Germany

Some features of OroTimesheet

Manage project costs and billing : In addition to manage time per project, if needed, our timesheet software allows you to manage costs and billing. OroTimesheet is very flexible to calculate costs and billing and it adapts easily to your needs. Cost and billing rates are customizable per employee, project, etc. Cost rules and Billing rules options are also available for more flexibility.

Easy setup : A wizard allows you to configure the software in less than 2 minutes. You can even select your logo and it will be automatically displayed on invoices.

Integrate with Simply Accounting and QuickBooks : Easy integration with [Simply Accounting](#) and [QuickBooks](#) software. You are using one of these software? Just click a button to synchronize your list of customers or to export your invoices.

Import data : You can import data from other software, databases or files and you can also export OroTimesheet data to different file formats. You can even access OroTimesheet data using an ODBC driver.

Maintain time banks for your employees : OroTimesheet allows you to maintain a time bank for each of your employees. In some cases, employees and employers will choose to keep overtime in a bank.

Many reports included : More than 200 reports and forms are already included with OroTimesheet. You can customize all existing reports and forms or create new ones using the powerful reports generator also included with our timesheet software.

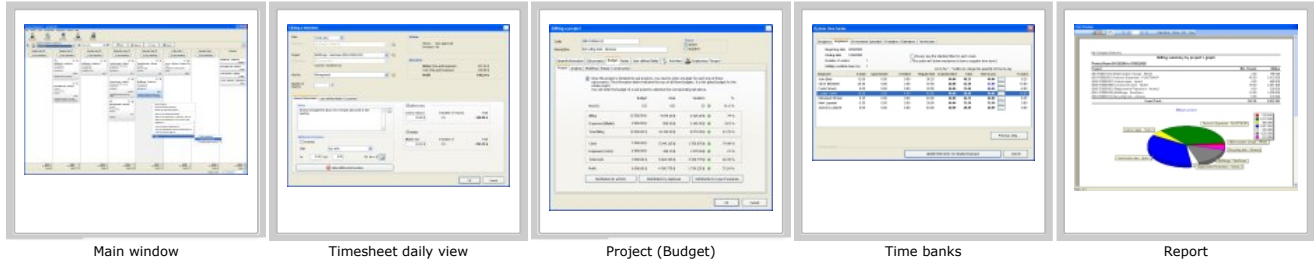

Create your own custom fields : Customizable fields can be defined in most of the modules of OroTimesheet. These user-defined fields are used to enter and manage information specific to your company. User defined fields can take several forms, such as an edit box, a checkbox, a dropdown list, radio buttons, etc.

Start/Stop timer application : A small program named Timer for OroTimesheet is also included with OroTimesheet. This program install itself in the Windows system tray and allows to record spent time on projects and activities. Then, this time can be converted into timesheets.

Web interface : A web interface is also included with OroTimesheet. This web interface is very useful for entering timesheets without having to install OroTimesheet on the client computer. Your employees can enter their time through the web interface or through the OroTimesheet standard program. The web interface is very useful for example when you have employees on the road or in remote sites.

Complete security : Activable if needed, our timesheets management software includes a complete security per user as well as flexible access and supervision rights management.

Punch clock also available : The punch clock for OroTimesheet is a software that works in conjunction with OroTimesheet. Your employees could punch in and out using this punch clock software. This is particularly useful for employees working in a factory, an hotel, or any employees not working on a computer. Learn more about the [punch clock software for OroTimesheet](#).
