Image Tricks — Photo and Image Editing Software for Mac

Image Tricks is a freeware application for editing your photos and images using Mac OS X Core Image filters and Quartz Compositions that unimaginably transform your photos. This program also contains a powerful random image generator for creating unique backgrounds and abstract images for business cards, web design, print materials and more.

You can also use Image Tricks directly in other BeLight Software applications — [Business Card Composer](#), [Disc Cover](#), [Labels & Addresses](#) and [Swift Publisher](#). Launching the editor in these programs is as simple as double clicking on any image in your project.
