About

Outlook Password Decryptor is the FREE tool to instantly recover lost password for all versions of Outlook Application.

Outlook stores the password for subsequent logins when user selects the '**Remember Password**' option during authentication. The password is stored in the encrypted format and only respective user can decrypt the password.

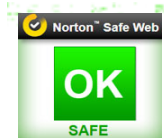

Different versions of Outlook store the password at different locations using different mechanism. OutlookPasswordDecryptor can **decrypt all these passwords** within fraction of second. It can not only recover the passwords of the current Outlook version but also from any earlier Outlook versions used on the system.

Current version v2.0 supports report generation in XML format along with improved interface and reports.

It can recover passwords from all versions starting with Outlook Express to latest version, Outlook 2010 and works on wide range of platforms starting from Windows 2000 to **Windows 7**.

Features

OutlookPasswordDecryptor is the ONE application to recover passwords from **ALL versions of Outlook**. Also it can decrypt passwords from different type of Email account configurations supported by Outlook, such as

- ▶ SMTP
- ▶ LDAP
- ▶ HTTP

On starting, it automatically detects the current Outlook version along with user & platform information. It also provides option to save the recovered password list to **HTML or TEXT or XML file** for future use.

Internals

Different versions of Outlook uses different location and mechanism to store the account password along with other details such as email and server information.

Outlook Express, 98 and 2000 versions store the remembered password in the 'Windows Protected Storage' similar to older versions of Internet Explorer. The password link and other account information are stored at one of the below mentioned registry locations.

```
HKEY_CURRENT_USER\Software\Microsoft\Internet Account Manager\Accounts
HKEY_CURRENT_USER\Software\Microsoft\Office\Outlook\OMI Account Manager\Accounts
```

The newer version of Outlook starting from 2002 to 2010 stores the account password (other than Exchange Server) in encrypted format at following profile location

```
[Windows NT onwards]
HKEY_CURRENT_USER\Software\Microsoft\Windows NT\CurrentVersion\Windows Messaging Subsystem\Profiles

[Prior to Windows NT]
HKEY_CURRENT_USER\Software\Microsoft\Windows Messaging Subsystem\Profiles
```

Newer versions of Outlook store the 'Exchange Server' based passwords in the credential provider (like [network passwords](#)) which is more secure than other methods.

For more internal details on how OutlookPasswordDecryptor decrypts these passwords read the following research article, '[Exposing the Secret of Decrypting Outlook Passwords](#)'

Installation & Uninstallation

Though OutlookPasswordDecryptor is a Portable tool, it comes with Installer so that you can install it locally on your system for regular usage. This installer has intuitive wizard (as shown in the screenshot below) which guides you through series of steps in completion of installation.

At any point of time, you can uninstall the product using the **Uninstaller** located at following location (by default)

```
[Windows 32 bit]
C:\Program Files\SecurityXploded\OutlookPasswordDecryptor

[Windows 64 bit]
C:\Program Files (x86)\SecurityXploded\OutlookPasswordDecryptor
```

Using OutlookPasswordDecryptor

OutlookPasswordDecryptor comes as portable application and it can also be installed locally on your system. It is very simple and straightforward to use.. You can just start it by double clicking on the executable file.

Here are the brief usage details....

- ▶ On launch, it will display current Outlook version, logged in user name & OS version information.
- ▶ Now click on 'Start Recovery' button and it will instantly decrypt all types of stored passwords by Outlook.
- ▶ It will display clear text password along with other details such as Email address, User name, Account type and Server name.
