## VirusBuster Personal Antivirus

### Personal protection against malware attacks

#### Incremental virus database updates

Using the incremental update mechanism the download time is reduced to a minimal level so we can release additional virus database packages several times a day to improve the defence. Users can obtain protection against new malware without spending long time and generating considerable network load for the update.

#### Easy to use

VirusBuster Personal's user interface was designed so that it is easy to use for beginner and experienced users alike. Using the wizard style interface is very easy, as every step has a detailed description and help, therefore every update or scan can be added or the settings of the resident protection can be modified by anyone in a couple of minutes.

#### Task oriented operation

The product is based on tasks. Product and virus database updates, scheduled scans or any other function can be added as a task. All tasks are executed at the needed time automatically with the desired settings.

#### Outstanding performance and effectiveness

VirusBuster Personal is based on VirusBuster's scan engine, which has an outstanding performance. The engine uses heuristic analysis to detect harmful programs. Thanks to its platform- and operating system independent scanning methods it effectively scans for all known viruses, and malicious codes.

### System requirements:

#### Operating system

MS Windows 2000/XP - 256 MB

MS Windows Vista/Win7 - 512 MB

Recommended to install the latest Service Pack and use at least 512 MB (1024 MB in case using Vista/Win7) memory depending on other applications running on the system.

#### Processor

400 MHz (x86/x64)

#### Free hard disk space

200

#### Browser

Internet Explorer 6

### Supported operating systems:

Windows 98se/Me/2000/XP/Vista/Win7

### Downloadable documentations
