USB Flash Drives Control

Version: 3.0.1.2 | **Date:** 31.10.2011 | **Filesize:** 243 KB | **Download now** | Alternative locations: [Softpedia.com](#) [MajorGeeks.com](#)

Program Overview

USB Flash Drives Control is a small and easy to use program that runs in taskbar, next to the system clock, and provides quick access to control the way in which the USB flash drives are used on your computer. USB Flash Drives Control offers four operating modes:

Enable USB Flash Drives - This is the default Windows setting.

Disallow Execute - If you check this setting, execute access will be denied for all executable files on all USB flash drives used on current computer, on all user profiles. This ensures a plus of security to your system against dangerous and malicious software, like worms, backdoors or password stealers. *This option is available only for Windows 7.*

Read Only Mode - If you enable this setting, write access will be denied on all USB flash drives used on current computer. All USB flash drives become read-only. There may be cases where we may want the users to connect their USB flash drives to our computer only for reading the data from them, but not let other people to copy informations from our computer, into their USB flash drives.

Disable USB Flash Drives - Assume that you want to prevent users from connecting to a USB storage device that is connected to your computer, just use this option and users won't be able anymore to install and use USB flash devices on your computer.

Program Features

- ✓ Just one small executable file. All features are packed in the same file.
