PictureProject Export Utility  
Answer ID 14371 | Published 09/05/2007 04:25 PM | Updated 01/04/2011 09:01 AM

What is the PictureProject Export Utility?

This is the **Picture Project Export Utility**- Please review the information provided, and click the appropriate download option at the bottom of the page.

Introduction

This software is a wizard type application that helps you to transfer picture management from PictureProject to ViewNX or a standard image-management component of your computer's operating system.  
The following three types of processing are simultaneously performed for pictures cataloged with PictureProject.

- 1. A separate image file is saved, inside the same folder as the original image file, for each marker saved for edited JPEG- and TIFF\_ format pictures.
- 2. Album information (collection name, folder name) is registered in the keyword field of IPTC information for image files ( except movies, image dust-off data [.ndf], and audio files). This information can be used for Windows Vista and MacOS X Spotlight (Mac OS 10.4.x and later) keyword searches.
- 3. Folder paths for pictures cataloged with PictureProject are output in an HTML file. You can open the image folder in Windows Explorer by opening the output HTML file in a Web browser and clicking on the desired folder path.

\* For further details, see the PictureProject Export Utility ReadMe file.

Important Notes

This software functions properly with images captured by PictureProject-supported cameras. Confirm that images were captured using a camera supported by PictureProject before running this software. Please check the "Details" drop down list at the bottom of this page for supported cameras.

PictureProject cannot be returned to its previous state when operated after this software is run. Pictures are still cataloged with albums as they originally were, but as the original pictures created in PictureProject have been replaced with newer images created by this software, any editing performed on the original pictures has been lost.  
If you intend to continue using PictureProject, you do not need this software.

Supported System Requirements

Windows:

- CPU: 1-GHz or better Intel Celeron / Pentium 4 / Core Series
- Microsoft Windows Vista Home Basic\*
- Microsoft Windows Vista Home Premium \*
- Microsoft Windows Vista Business \*
- Microsoft Windows Vista Enterprise \*
