Step 4: Run miTracker and start to protect your laptop & data

miTracker has simplistic interface which is easy for operation. From the main interface, we can see clearly that miTracker is composed of local features and cloud based functions. Local features include "File Encryption" and "File Shred". Cloud based features include "Locate stolen laptop", "Remotely delete files from stolen laptop" and "Remotely lock the stolen laptop". All these features are designed to keep your laptop and data security.

Testimonial

" Amazing laptop tracking software. I lost my laptop and I was so worried about the confidential files in my laptop. Thanks to miTracker, it helps me delete the file and then lockdown the computer totally. I don't have the data leakage concern any more "

— Ryan Smith

Step 5: Encrypt your important files with local File Encryption

miTracker employs military AES encryption standards and it can encrypt both files and folders. For individual file, click "Add Files" and then click okay to start encrypting. For many files, you can create a folder and put all the files into this folder, then click "Add Folder" to encrypt. If you want to decrypt the files, select it and click "Decrypt" button, then it will decrypt automatically.

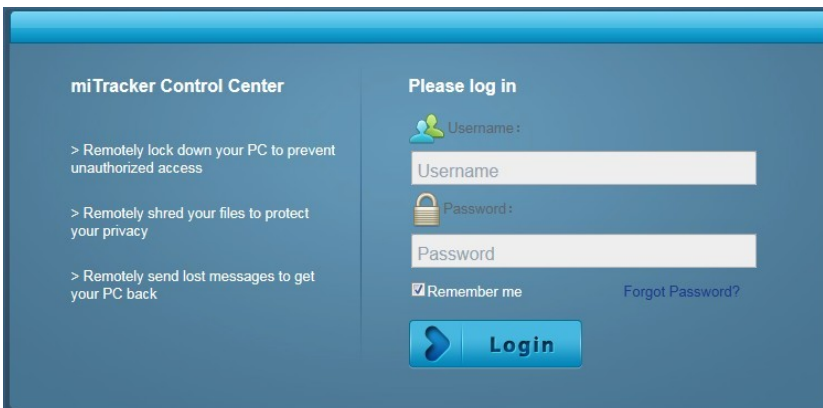

Step 6: Delete all your unwanted but important files with local File Shredder

For unwanted but confidential files that you want to destroy, File Shredder is your right choice. Click "Add Files" to input individual file or click "Add Folder" to input batch files, then click "Shred" to delete all the files permanently and nobody can recover. There are five shredding algorithm for your choose, Gutmann Algorithm, Erase and random data, National safety association standard, United States military standard, North Atlantic Treaty Organization standard.

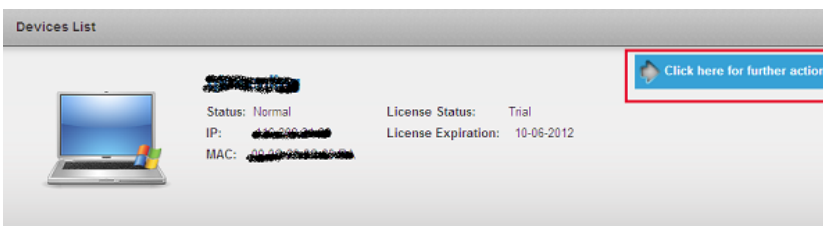

Step 7: Log into online control center to recover stolen laptop through cloud based

When you find your laptop lost or stolen, you need the cloud based features to help you find back the laptop and protect your data stored in it. Go to the online control center entrance page, login it with your registered name and password. The login page address is <http://www.mitracker.com/control/login.aspx>

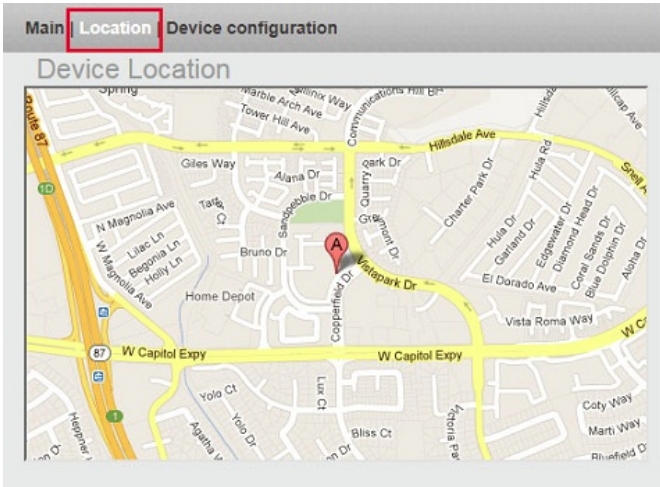

Step 8: Device information is displayed

Once you login, your device and account information including IP address, MAC address, license expiration date and device status. Click "Click here for further actions" to apply more actions on your stolen laptop through remote control.

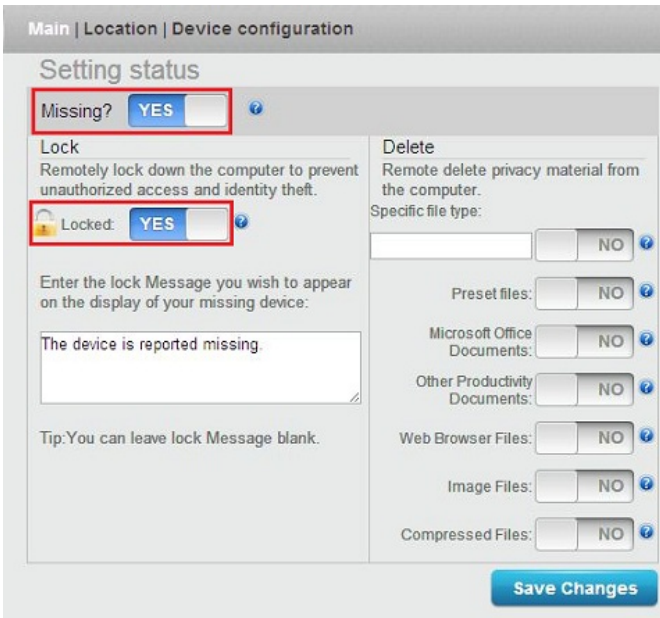

Step 9: Locate the stolen laptop

Click "Location" tab, your stolen laptop location will be displayed. miTracker uses Wifi location technology, so it is shockingly accurate.

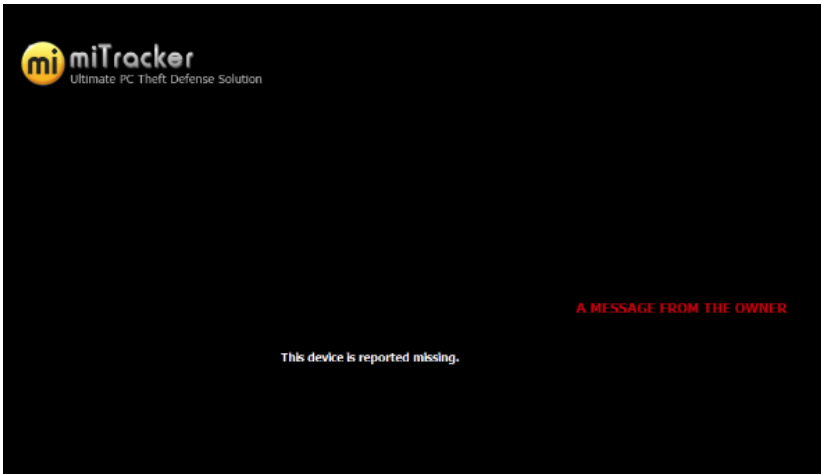

Step 10: Remotely lock down the stolen laptop

Firstly turn on the "Missing" button, this is the main switch. Then turn on the "Lock" button, choose to type the message or leave it blank, this is optional. The typed message will display in the stolen computer, or just black screen if you leave the message blank.

After several seconds, the lost computer is locked down totally. See below screenshot.

Step 11: Remotely delete the files from the stolen laptop

You can specify files by extension, if you have a specific type you want to get rid of. You also can select "Preset files" to Yes to delete files which are encrypted by miTracker local File Encryption feature. Some standard file types can also be deleted remotely such as Office, common file types (PDF, txt, etc), web browser caches, image files, and compressed file types. Make sure the "Missing" button is turned on, then click the ones you want and hit save button.

The screenshot shows the "Setting status" window in the miTracker application. The window has a tabbed interface with "Main", "Location", and "Device configuration" tabs. The "Missing?" toggle is set to "YES" and is highlighted with a red box. Below this, there are sections for "Lock" and "Delete". The "Lock" section includes a "Locked:" toggle set to "NO" and a text area for a lock message. The "Delete" section includes a "Specific file type:" field with "bak.dat" entered, and several other file type toggles: "Preset files" (YES), "Microsoft Office Documents" (YES), "Other Productivity Documents" (NO), "Web Browser Files" (NO), "Image Files" (NO), and "Compressed Files" (NO). A "Save Changes" button is at the bottom right.
