Recover gigabytes of lost storage

MacCleanse is a powerful application geared towards purifying your system and reclaiming hard disk space. In only seconds, it can perform over fifty tasks which could take hours to perform manually. Safely uninstall applications, slim Universal Binaries, wipe unused languages, erase caches, empty logs, clear cookies, forget web histories, locate unused and old files, and more. MacCleanse won't miss a thing and could reclaim hundreds of megabytes, if not gigabytes, of storage.

Safely, and securely, removes files

Going above and beyond the call of duty, MacCleanse provides detailed information on each item it cleanses, and can even wipe files with US Department of Defense level security. After a scan is complete, never worry about deleting something automatically by mistake. MacCleanse provides a detailed list of all items it intends to clear before the operation completes, and allows you to uncheck any to leave untouched. Also run it automatically on a weekly schedule with a preset list of items to erase so you won't even have to think about it.

Maintain your privacy

It is an ideal solution when shopping for gifts, cleansing the system after someone else has used it, when preparing to sell your computer, or just for reclaiming wasted disk space. But, most importantly, ensure your personal information is out of reach.

Custom-tailored

MacCleanse also contains enhanced features for specific applications like Acquisition, Adium, AIM, aMSN, Azureus, Bit Torrent, Colloquy, FireFox 2 & 3, iCab, iChat, ICQ, Internet Explorer, Mozilla, MPlayer, MSN Messenger, Netscape, OmniWeb, Opera, Preview, QuickTime, Safari, Skype,
