QuickStart

FAQs

e-Campaign bulk email software enables you to easily design rich HTML emails and newsletters, and deliver *personalized* HTML emails to your target audience using mailing lists.

It sends a personalized/separate copy of your email to each address in your mailing list (one at a time); and each recipient will see only his/her email address in the To: field. You can personalize *every* respect of your message: email subject, message body, file attachments, and even embed different images for different recipients in the same mailing list.

Among the key features are: personalized bulk emails (*email merge*), support for popular databases (*Access/Excel, SQL Server, MySQL, etc.*), email open tracking, SMTP and Exchange Server support, built-in SMTP server, conditional mail merge, recurring email scheduling, fast email delivery, load-balancing among multiple SMTP servers, email throttling, list de-duplication (*skipping duplicate email addresses*), built-in list editor, exclusion lists, bounces handling, personalized file attachments and images, SSL and TLS, 64-bit technology, Unicode and international character support, and most important, **ease-of-use**.

e-Campaign is the first and **ONLY** bulk email software on the market that supports sending bulk email via Microsoft Exchange Server (as well as normal SMTP servers) ...

Sending "Spam" is against the license policy of e-Campaign **bulk email software** (aka **email marketing software, email campaign software, mass email software**) and we strongly discourage it. This HTML email newsletter software enables you to send and create

mass email newsletter with ease.
DO NOT SPAM.

***e-Campaign® bulk email marketing software** is a product of LmhSoft. Email merge software.*
