## What is spotflux?

Spotflux is devoted to protecting your digital privacy and security anywhere and on any device. Our tiny, but powerful application not only encrypts your internet traffic, it also performs millions of cloud-based, real-time calculations to remove tracking cookies and viruses without slowing your device.

## Here's how spotflux lets you take control of the internet:

### Encrypted and Secure Connection

Whether at home, traveling, or on a public WiFi, spotflux encrypts and secures your connection and protects your

### Malware and Virus Protection

Spotflux continuously scans and protects your connection for inbound threats such as malware and viruses.

### Open and Unrestricted Access

Spotflux doesn't believe in limiting or blocking access to content. Access is always open and unrestricted while

### Private, Ad-free Browsing Experience

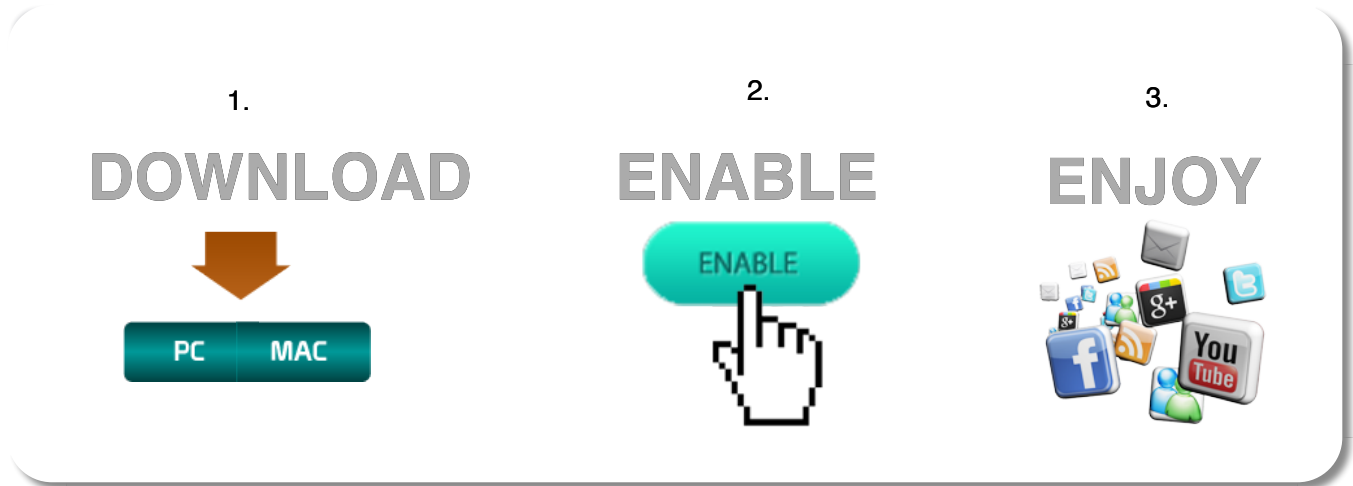

Enjoy clean ad-free browsing without tracking or targeted advertisements. Spotflux saves bandwidth, hides your

privacy while browsing.

connected to spotflux.

IP address, and keeps your location private.

spotflux is easy to use, and requires only 3 steps:

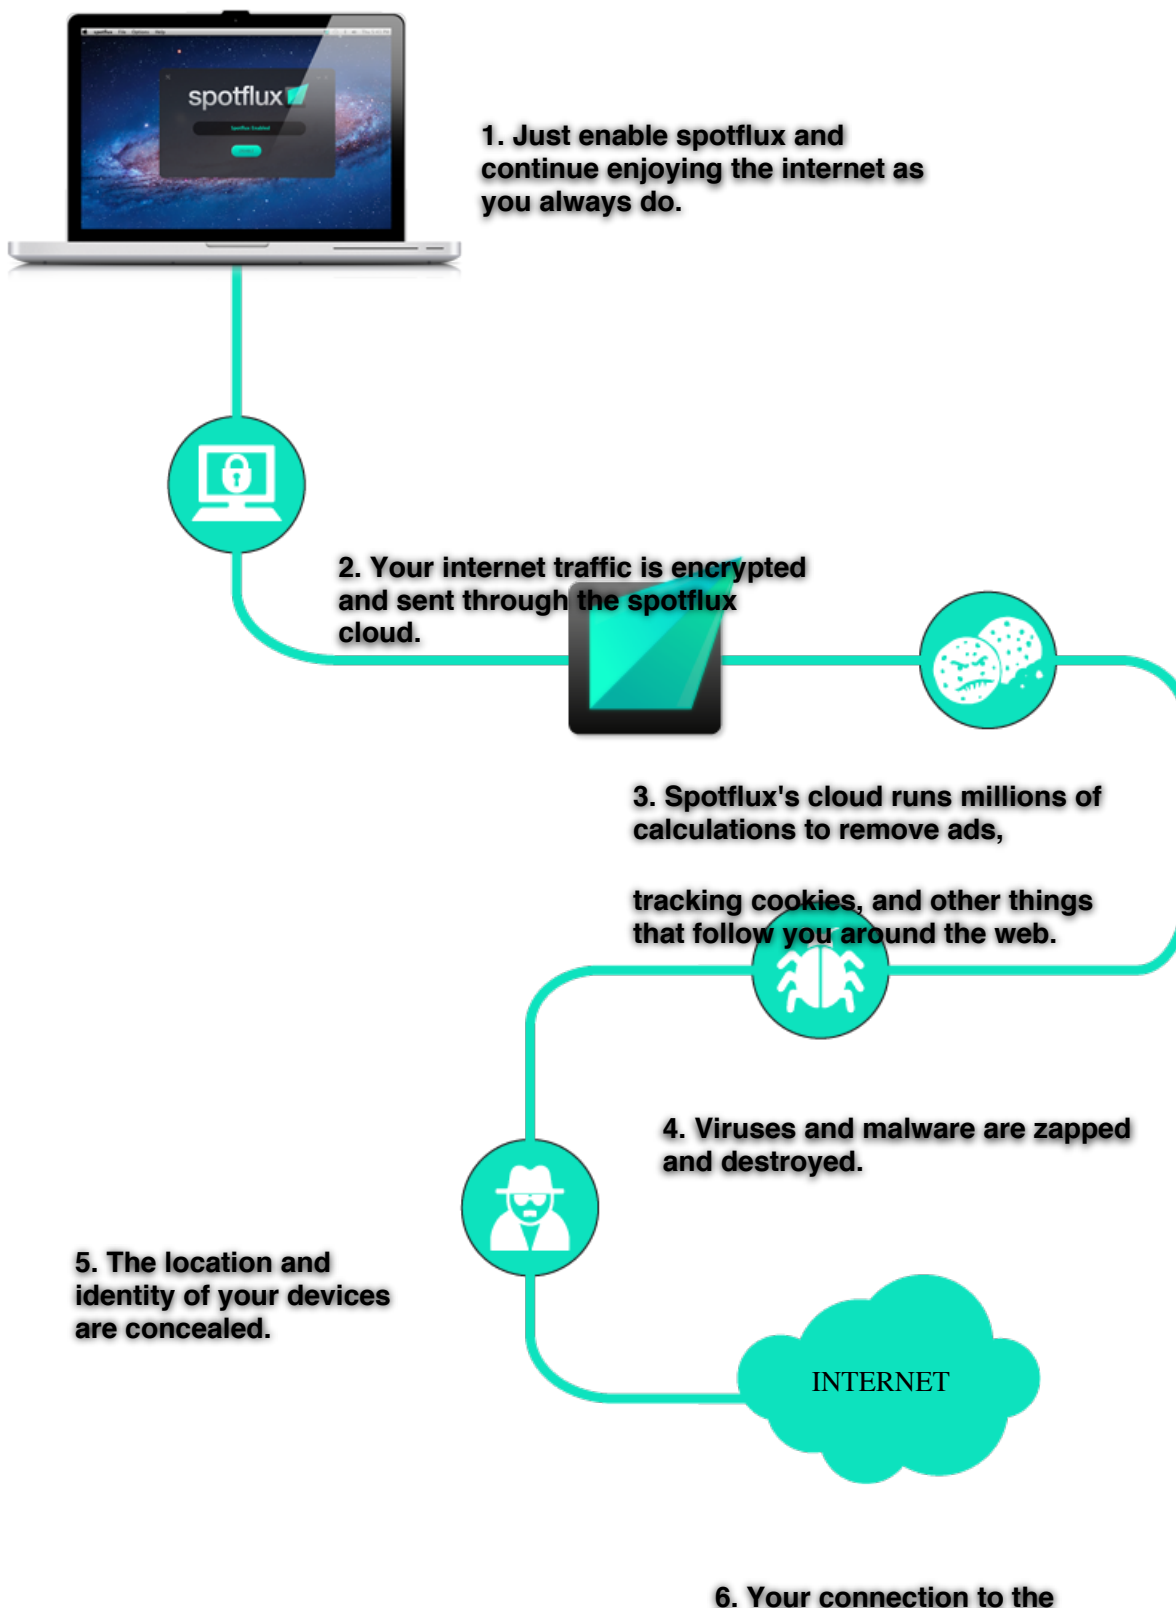

## How DOES IT WORK

Spotflux harnesses the power of the cloud to conduct millions of real-time checks for invasive tracking, advertisements, malware, and other bugs that pose a threat to your identity or your data.

Our Technology is complex and ever-evolving. While we work to improve our technology, we encourage our users to enjoy our services free of charge.

# WHAT HAPPENS BEHIND THE SCENES?

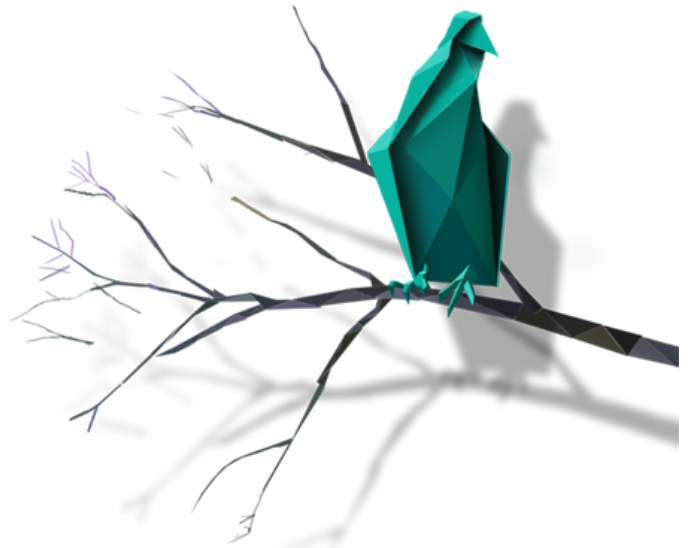

**internet is safer, more private,  
and unrestricted.**

# Who is spotflux?

Spotflux is a New York City based start-up devoted to putting you first on the internet. We're working hard to create tools that work to protect your privacy and security while retaining full access to information regardless of your location.

There are few companies out there that care about your privacy. At spotflux our passion is to fight this trend, and to enhance the overall internet experience for our users. We love the internet as much as you do, and believe that there should be someone looking out for you. That's our goal.

Spotflux is located at 33 Nassau Ave in Brooklyn, NY. For more information contact us at: [info@spotflux.com](mailto:info@spotflux.com)

## When was spotflux founded?

Spotflux officially launched in March 2012 at SXSW. Co-founders Chris Naegelin and Dean Mekkawy were high school friends and techies during the 1990's when the internet was a much friendlier place. In 2011, after working in the "real world" for almost a decade, Dean and Chris decided that it was time to bring back some sanity to the internet and give people a choice when it comes to privacy online. Starting with just a few servers in Chris's basement, spotflux was born, and the two of them set off to build a beta client that amassed over 100,000 users in just a few months. Today, spotflux is a lean venture backed startup that continues to grow at exponential rates as people seek to reclaim their privacy online.

## Who are our investors?

We're funded by New Atlantic Ventures, Kima Ventures, and a handful of really cool angel investors.

## How can spotflux be free?

Like the early days of Twitter, Facebook, and Dropbox, we are in the process of making major improvements and once we've developed some really cool new features we will make them available for purchase.

## How can I trust you?

We understand that earning your trust is not easy. For starters we are open about our [privacy policy](#), we don't have any acronyms associated with our name and we publish our street address on the front page of our website. Most importantly, ask us a question on twitter or facebook and we'll do our best to respond. We believe in being open and honest, and that your trust should be earned, not expected.

## Is spotflux hiring?

You bet! We continue to search for exceptional talent; System and network engineers, Java gurus and marketing geniuses. Send your resume to jobs at spotflux.com.

## Is this just another [Proxy](#) or [VPN](#) service?

No. While we do tunnel and encrypt your internet traffic, once it reaches our cloud we conduct millions of real-time and automated calculations to remove tracking cookies, malicious viruses, and other nasty things from your internet connection. We're developing some really interesting technology to enhance your privacy and security online.
