1 INSTRUCTIONS.....3

1 Instructions

In the event of a disaster, you may need to promote your High Availability Instance of Passwordstate to your Primary Instance. To do some, please follow these instructions:

1. Using SQL Server Management Studio, connect to the database server hosting the High Availability Instance of Passwordstate, and perform the following:
 - a. Delete the SQL Server replication Subscription
 - b. For the SQL Account 'passwordstate5_user' modify the permissions so it has 'db_owner' access to the Passwordstate5 database
2. Edit the file 'c:\inetpub\passwordstate5\web.config' and change the value of key='PassiveNode' to False

You can now open your browser and point it to the promoted Passwordstate web site.
