 **Read what MailSteward users have to say**

With a single click on the Archive button, MailSteward will archive all of the email in all of your Apple Mail accounts into a database for easy retrieval. One click and MailSteward will go to work storing copies of all your email text, HTML, attachments, and raw source, into a relational database. MailSteward has a wealth of features for importing, tagging, saving, and exporting, including the ability to export your vital email information in a number of standard data formats.

To really understand just how invaluable and easy to use MailSteward is, [Download the free version of MailSteward or MailSteward Pro](#) and try it out on your email. The free version is full-featured, but archives a maximum of 15,000 emails.

MailSteward comes in three versions, [MailSteward Lite \(\\$24.95\)](#), [MailSteward \(\\$49.95\)](#), and [MailSteward Pro \(\\$99.95\)](#). The Mac App Store version has been discontinued due to Apple's new rules for app store submissions, which would severely limit MailSteward's functionality.

There is a bulk discount for purchases of 10 to 20 copies of either MailSteward or MailSteward Pro, and 50 user site licenses are available for

#### Reviews

Like the car crusher at a junkyard, MailSteward Pro is an efficient, purpose-built dynamo.

[-MacWorld.com](#)

**thinkmac.net**  
 5 out of 5 excellent

I have not seen a finer archive solution for mail on any platform... I highly recommend it.

[-MyMac Magazine](#)

"MailSteward proves itself to be the ultimate Mac email manager and archiving tool."

[-MacFormat Magazine issue 175](#)

**MacFan**

"There's nothing you can't do with your mail with this."

[-Tim Verpoorten on MacRoundTable](#)

[Listen to the review.](#)

"...does more than any Mac application does to archive and retrieve email."

[-Mac360.com](#)

"MailSteward is a must-have tool for your email management toolbox..."

[-Mac101.net](#)

both products.

MailSteward Lite has all of the archiving and searching functionality of MailSteward, but lacks the ability to save frequently used searches, and the features of exporting, and merging databases. MailSteward Pro has all of the features of MailSteward, but uses the MySQL Server software for its database, rather than the SQLite database engine used by MailSteward and MailSteward Lite.

Regular MailSteward, using SQLite, can handle large volumes of email, 100,000 or more, but for very large volumes that require an industrial grade relational database server, MailSteward Pro is the answer. MailSteward Pro requires MySQL database server software to be installed and running.

An upgrade of MailSteward to MailSteward Pro is available for \$49.95. If you are a registered user of MailSteward, click on [upgrades](#) and follow the instructions to obtain the latest version.

## Feature Comparison Chart

Features	MailSteward	MailSteward Lite	MailSteward Pro
create archive database	✓	✓	✓
select by date range	✓	✓	✓
search by combo of to, from, subject, mailbox, body, attachments	✓	✓	✓
fast search of large volume of email	✓	✓	✓
customize sql select statement	✓	✓	✓
sort by from, to, date, subject, mailbox, no. of attachments	✓	✓	✓
click on attachment to launch or save it	✓	✓	✓
Search binary attachments that contain text	✓	✓	✓
save or print selected emails as formatted, sorted text	✓	✓	✓
Schedule to automatically archive email	✓		✓
add searchable tags to email: category, key words, notes, & priority	✓	✓	✓
export to mbox file	✓	✓	✓
export to SQL file, importable by MySQL	✓		✓
export to tab-delimited text file	✓		✓

**Select** email from archive by date range and keywords in the To, From, Subject, Mailbox, or Body fields.

**Sort** by date, To, From, Subject, Mailbox, or unique ID.

**Add your own tags** to email & import MailTags©

**Schedule** MailSteward to archive your email automatically.

**Search** binary attachments that contain any text.

**Print email** list, or individual email, or all email in a list.

**Save email** list, or individual email, or all retrieved email to a text file.

**Reply** to individual emails.

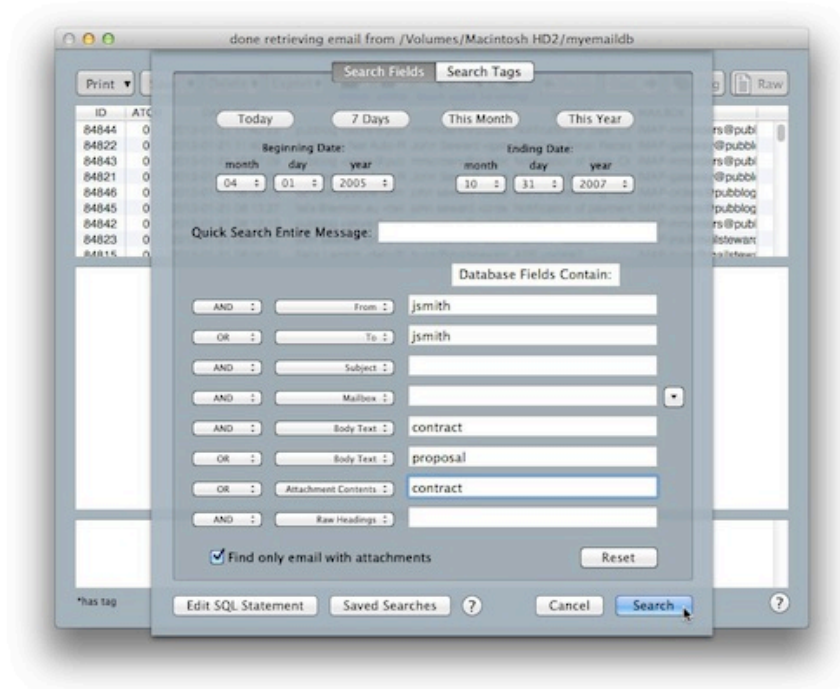

**Export emails** to a tab-delimited text file, a separate database file, an mbox file, or an SQL file.

**set up rules** for auto tagging of email

**All email folders** are left undisturbed.

**Options to store** attachments, HTML, enriched text, and raw source, as well as plain

## Screen Shots

text.

**Universal binary** runs on PowerPC and Intel Macs.

**Native Cocoa** application that supports OS X 10.6 and greater (Snow Leopard, Lion, or Mountain Lion).

### System Requirements

Mac OS X 10.6 or greater (Snow Leopard, Lion, or Mountain Lion).

Works seamlessly with the Mac OS X Mail email application, and most exported mbox and eml files from other email clients.

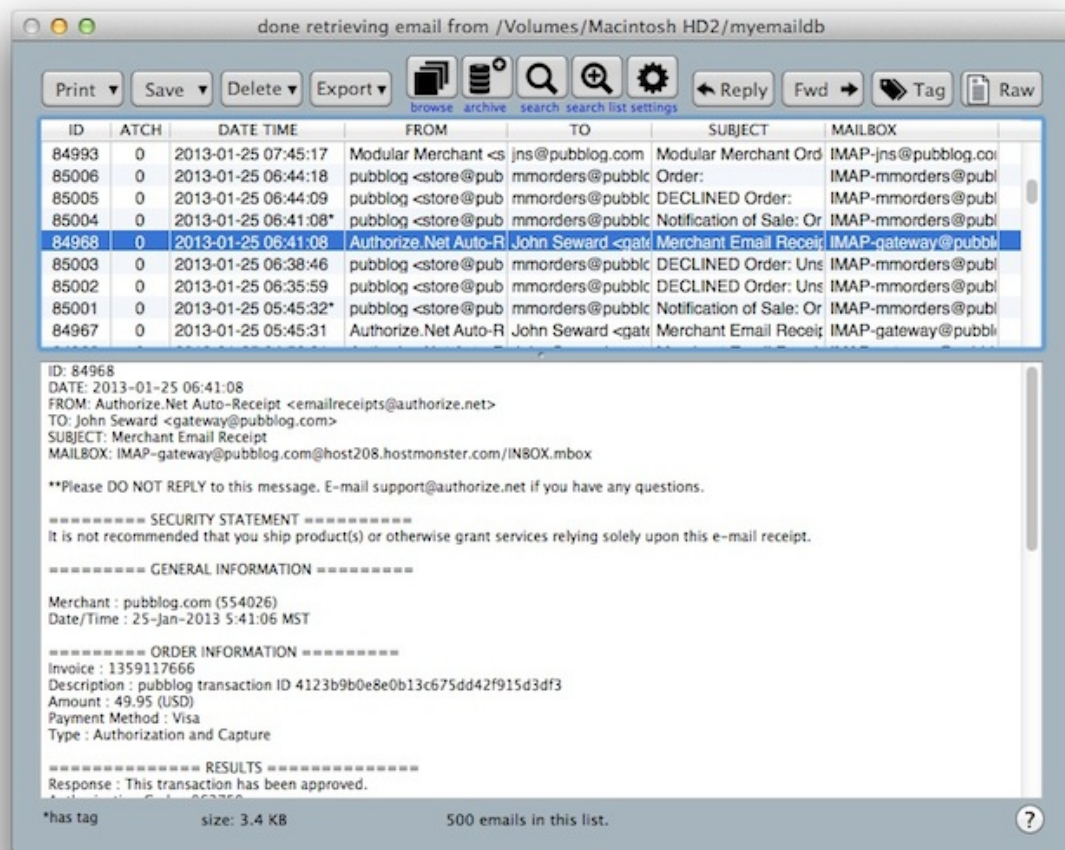

MailSteward Pro requires that MySQL® be installed and running.

## PixSteward

The essential Flickr backup and database for Mac. PixSteward downloads pictures and metadata from your Flickr accounts and archives them in a relational database on your local computer, allowing offline searches and image exporting.

## FileMyFiles

The essential multi-tool file system organizer. Clean up your Desktop with one click. Copy important files to your laptop to go on the road. Uninstall and Remove applications and all of their related files and folders. Selectively delete files and folders From the Trash. Schedule FileMyFiles to

keep all of your important folders organized.

## WordWrapper

Simple, Intelligent Removal of "Hard" Carriage Returns. WordWrapper replaces the returns with a space so your word processor can easily reformat your text. It'll work on any text file, or you can word-wrap the clipboard, or drag text files onto the WordWrapper application. It's intelligent enough to recognize paragraphs and to leave the carriage returns where you want them.
