Protect your growing business from

# network attacks

Every company has one thing in common; they can't afford to have their business computers breached by hackers and suspicious programs. With so much of your business on your Mac, it's imperative to have a sophisticated layer of protection to keep unauthorized people and applications off of it. Intego Net Barrier 2013 does just that, automatically protecting you at home, at the office, or on the road.

## Automatic pr

Whether you're a  
and conferences,  
appropriate settir

## Identify and block untrusted devices

Want to share files with your colleague without opening up your computer to everyone else? Intego Net Barrier 2013 identifies various devices that are trying to access your Mac and lets you decide what's allowed in and what gets turned away.

## Settings as easy as 1-2-3

Network settings shouldn't be confusing and complicated. We've simplified the options to home, public, or work. When we see that your network connection has changed, we let you know and make it easy for you to adjust to the best level of protection.

## Configuring connections just got easier

Intego Net Barrier 2013 makes changes to your firewall simple and, better yet, understandable.

Want to temporarily allow connections from the Internet or allow remote desktop? No problem. The settings are intuitive for you and your employees.
