## Language Files

If you would like to see the program in your language you can download one of the the language files below and you can have the program translated to your language. If you click on your country flag you will download a file named wfc.lng. You have to copy this file in the installation folder, where the file wfc.exe is located. If you restart wfc.exe the new strings will be read from the language file. The language file is a plain text file and can be easily translated to any language with any text editor. If you have time and you translate the file to a language which does not appear here, please send it to us too and we will update this page. Thank you. Below you can find the available language files:

## Program Overview

Windows Firewall Control is a nifty little application which extends the functionality of the Windows Firewall and provides quick access to the most frequent options of Windows Firewall. It runs in the system tray and allows user to control the native firewall easily without having to waste time by navigating to the specific part of the firewall. This is the best tool to manage the native firewall from Windows 8, Windows 7 and Windows Vista. Windows Firewall Control offers four filtering modes which can be switched with just a mouse click:

**High Filtering** - All outbound and inbound connections are blocked. This setting blocks all attempts to connect to and from your computer.

**Medium Filtering** - Outbound connections that do not match a rule are blocked. Only programs you allow can initiate outbound connections.

**Low Filtering** - Outbound connections that do not match a rule are allowed. The user can block the programs he don't want to initiate outbound connections.

**No Filtering** - Windows Firewall is turned off. Avoid using this setting unless you have another firewall running on your computer.

## Program Features

- ✓ Just one small executable file. All features are packed in the same file.
- ✓ Intuitive and easy accessible interface in the system tray.
- ✓ Full support with standard user accounts.
- ✓ Possibility to create temporary rules.

- ✓ Disable the ability of other programs to add Windows Firewall rules.
- ✓ Multiple and easier ways of creating new rules in Windows Firewall.
- ✓ Full support of creating, modifying and deleting Window Firewall rules.
- ✓ Lock feature which can disable the access to the settings of the program.
- ✓ Shell integration into the right click context menu of the executable files.
- ✓ Search for invalid rules with the possibility to delete them.
- ✓ Search for executable files through folders and create new rules in seconds.
- ✓ View recently blocked connections and create new rules from the log.
- ✓ Choose if you want the program to start at user logon.
- ✓ Import and export the settings of the program.
- ✓ Protection to unauthorized uninstallation.
- ✓ Possibility to restore previous settings at uninstallation.
- ✓ And many more. Just try it out.

---

### Registered Users Features

✓ *Learning Mode* which provides notifications for outgoing blocked connections. Four modes are available:

**High** - Display notifications for all outgoing connections that were blocked by Windows Firewall, including System and Svchost.exe.

**Medium** - Display notifications only for regular programs, without notifications for System and Svchost.exe.

**Low** - Automatically allow digitally signed programs without notifications, but show notifications for unsigned programs.

**Disabled** - Notifications are disabled.

---

### System Requirements

- ✓ Microsoft .NET Framework version 4.0
- ✓ Compatible with all 32bit and 64bit versions of Windows 8, Windows 7, Windows Vista, Windows Server 2008. Windows XP is not supported.
- ✓ Windows Firewall service is required to be enabled for Windows Firewall Control to run.
- ✓ DNS Client service is required to be enabled for the notifications to work properly.

---

### Known Limitations

- ✓ Windows Firewall have some incompatibility problems with software proxies, like Avast! Web Shield and Avira WebGuard. Read [here](#) about this.
  - ✓ Learning Mode is incompatible with BoxCryptor software.
  - ✓ Due to multiple system configurations and software installed there may be incompatibility problems.
- Please report them all and help us to improve Windows Firewall Control. Thank you for your support !
