Reason Software

Boost helps you gain back control of your PC by improving performance and stability with one click. Boost maintains performance and stability by preventing unnecessary programs from consuming system resources and affecting critical programs. When you start to feel your PC become sluggish, don't reboot, simply give your PC an instantaneous Boost with just one click. Boost helps to restore the pep in your PC by removing crapware, bloatware, trialware, bundleware, and adware. Such "crapware" (and yes that's an industry term) are known to cause system crashes, boot delays and just give your PC an overall sluggish feel. There are many forms of such extraneous software such as unneeded toolbars, adware, tracking programs, and other "free promotional software" to name a few. Think of crapware as being, just a whole mess of clutter that is causing your PC to feel bogged down.
