Ventrilo is comprised of two primary Components: The Client that every end user will need to download, and the Server. Only one person needs to host a Server that all of the other Clients will connect to. Ventrilo is supported on different platforms as well ranging from Microsoft Windows to Apple Macintosh and Linux.

Each of the following links will take you to a unique download page for the specified product. You can use these links on your web site in order to make downloading the client easier for your users, or you can link directly to this page so that they may see all of the available files.

Client programs

[Windows 32bit - XP, Vista, Windows 7](#) (Version 3.0.8)

[Windows 64bit - All 64bit platforms](#) (Version 3.0.8)
