AIMP3 Changelog

AIMP v3.50 Build 1224 Beta 1 (31.01.2013)

- + Common: Performance has been increased
- + Common: Player no longer supports configuration files from AIMP2
- + Common: Added support of long pathname (more than 260 characters), only for Windows Vista and newer
- + Common: Settings in options dialog has been regrouped
- + Common: Added an ability to split files by chapters (OGG, OPUS, M4A and M4B are supported)
- + Sound Engine: Added support for 132v24 sample format
- + Sound Engine: Now player has separate settings for crossfading in manual and automatic switching modes
- + Sound Engine: Equalizer has been improved - now all frequencies are processed between sliders
- + Skin Engine: Potential abilities are extended
- + Skin Engine: An ability to switch off spectrum animation for playable track
- + Skin Engine: An ability to dock window to the top and bottom screen edges
- + Player: Hotkey for the "Reload data from pre-image" command has been added
- + Player: Hotkeys for executing the "Bookmarks Manager" and "Equalizer" dialogs has been added
- + Player: Hotkeys for set mark to playable / selected files has been added
- + Player: Confirmation for the remove equalizer preset operation has been added
- + Player: Equalizer settings has been added to the DSP Manager dialog
- + Player: Now files merge into one queue, when send it to a removable device
- + Player: Added Drag-n-Drop support for the Bookmarks Manager
- + Player: The queue of shuffle playback is now stored on the application closing
- + Player: Playlist tab hint now contains information about playlist content
- + Player: Managing Playlists - added an ability to browse content of closed playlist (with search ability)
- + Audio Converter: Hotkey for start conversion process has been added
- + Audio Converter: Added an ability to save path structure during conversion process
- + Audio Converter: OPUS Encoder has been added
- + CoverArt Downloader: Caching of downloaded files for current work session
- + CoverArt Downloader: Click on image now opens it in external application
- + Scheduler: Alarm Clock - added an ability to execute action after pre-set time period
- + Scheduler: Alarm Clock - added an ability to set playlist as alarm clock ringtone
- + Tag Editor: The "File Size" column has been added
- + Tag Editor: Added an ability to resize window of "Presets Editor" dialog
- + Tag Editor: Rename files - added an ability to replace / remove selected characters
- + Tag Editor: Rename files - bilateral transliteration has been added (Russian - English)
- + Tag Editor: Rename files - new design
- + Tag Editor: Added support of "BPM", "Disc Count" and "Publisher" tag fields
- + Tag Editor: Added support of OPUS format tags
- + Tag Editor: Added an ability to calculate BPM (powered by SoundTouch Library)
- + Audio Library: Mark reading speed has been increased by 10 times
- + Audio Library: Added an ability to display rating instead of mark, if mark is not set
- + Audio Library: Added an ability to switch off automatic jump to next track during playback
- + Audio Library: Added an ability to send files to playlist
- + Audio Library: The "BPM", "Composer", "Publisher" and "File Format" columns has been added
- + Audio Library: Added an ability to add files to data base via Drag-n-Drop
- + Audio Library: Added special context menu for cells of the "Labels" column
- + Audio Library: Hotkeys for playback control has been added
- + Audio Library: New design of the "Labels Manager" dialog
- + Custom Controls: Context menu - added an ability to scroll items via mouse wheel
- + Custom Controls: Context menu - auto scrolling to selected item on menu popup
- + Custom Controls: Now you can switch between tabs via Ctrl+Tab and Ctrl+Shift+Tab / Ctrl+PageUp and Ctrl+PageDown shortcuts
- + Custom Controls: Scrollbar - added an ability to jump to position under mouse cursor via mouse click with pressed Shift key
- + Custom Controls: ListView and TreeView - per-pixel scrolling has been added

AIMP v3.20 Build 1165 (21.12.2012)

- * Tag Editor: Cover art now stored to special section in FLAC format
- * Player: The Algorithm of catching CUE sheets for audio files with double extension has been improved
- Fixed: Audio Converter - Sample format saves incorrectly for command line encoders
- Fixed: Audio Converter - Error occurs when trying to remove virtual track from disk
- Fixed: Radio Capture - Unable to choose command line encoder for capture
- Fixed: The "Ctrl+Del" hotkey is intercepted by playlist from secondary text input elements
- Fixed: The content of playlist stops drawing in some cases
- Fixed: Player doesn't play sound, if initialization of DSP-plugin failed
- Fixed: Player doesn't detect CD-drive at "A" letter

AIMP v3.20 Build 1163 (28.11.2012)

- * Audio Converter - Track Number column has been added
- * Audio Converter - %IN macro is now supported
- * Tag Editor - M4A Tag column has been added
- * Audio Library - Added an ability to edit tags of playable file
- Fixed: The Error Dialog cannot be closed via ESC key
- Fixed: Equalizer presets created incorrectly during install on Windows with non-russian locale
- Fixed: Radio Capture - Doesn't transfer tags to the file when capturing stream in AAC format without transcoding
- Fixed: Quick Tag Editor - Cover Art from folder does not display for virtual files
- Fixed: Quick Tag Editor - Extended information about radio station does not display, if Editor has been called from "Quick File Info" dialog
- Fixed: Skin Engine - Fully transparent elements in old skins does not drawn correctly
- Fixed: Skin Engine - Delayed update of visualization elements
- Fixed: Small bugs and defects

AIMP v3.20 Build 1155 (16.11.2012)

- * Playlist: Quick search can be finished now by pressing ESC key
- Fixed: Browse Folder Dialog - selected folder adding to the playlist independent from checkmark state
- Fixed: Sound Engine doesn't detects supported formats of audio device correctly
- Fixed: Tag Editor - Lyrics does not "break" by lines for M4A format
- Fixed: Tag Editor - track number does not save to playing file
- Fixed: Audio Library hangs in some cases when "add files" or "rescan tags" operation is active
- Fixed: Audio Library - alphabetic index has inverted scrolling by mouse wheel
- Fixed: Known memory leaks
- Fixed: Small bugs and defects

- Fixed: Sorting by %M template didn't work
- Fixed: Incorrect device switching with stopped player
- Fixed: Format of audio stream incorrectly detected for some radio stations
- Fixed: Context menu display incorrectly on multi-monitor configuration
- Fixed: Some CUE-sheet files parsed incorrectly
- Fixed: Incorrect selection behavior with pressed Ctrl
- Fixed: Incorrect behaviour of 'start playback on launching' function
- Fixed: Incorrect control of some sound effects
- Fixed: Some bugs with labels in Audio Library
- Fixed: Player didn't switch to the previous track if cursor was at the beginning of the playlist
- Fixed: Content-filters resets in Audio Library during the navigation by groups
- Fixed: Small bugs

AIMP v3.00 Build 815 Beta 1 (30.12.2010)

* BASS Libraries were updated
* Updated localizations: Armenian, Bulgarian, Czech, French, German, Japanese, Spanish, Ukrainian
* Skins: drawing speed has been increased
- Bugs were fixed

AIMP v3.00 Build 810 Beta 1 (20.12.2010)

+ Sound Engine: Our output system, BASS is used now only as decoder
+ Sound Engine: Added ASIO / WASAPI / Direct Sound support
+ Sound Engine: Extended track mixing options
+ Sound Engine: Added 5.1 / 7.1 Channels emulation
+ Sound Engine: Added DTS / TAK formats support
+ Sound Engine: Added OGG files support with multiple track inside
+ Sound Engine: Improved works with *.iso.wv / *.iso.ape files

+ Tags: Increased tags reading speed
+ Tags: Added reading / writing covers to OGG files
+ Tags: Added reading M4A / M4B / MP4 tags
+ Tags: Added reading / writing TTA / OFR / OFS tags

+ Skins: Added full support of semitransparent textures
+ Skins: Tray icon is now depends from skin
+ Skins: Added ability to create round sliders
+ Skins: Added ability to clon gauge and spectrum elements
+ Skins: Added ability to place playlist tabs vertically
+ Skins: Extended elements options

+ Player: New design
+ Player: Added ability of random switching visualizations
+ Player: Added ability to dock player with playlist to the screen edge
+ Player: Added ability to set alternative global hotkeys
+ Player: Added ability to pin player / playlist on the screen edge

- + Player: Expanded tracklist export options
- + Player: Improved options window
- + Player: Plugin manager was moved to options
- + Player: Extended running line animation options

- + Playlist: Added "Single playlist mode"
- + Playlist: Added ability to lock playlist from changes
- + Playlist: Added ability to disable auto expanding files by CUE
- + Playlist: Added ability to set individual settings for every playlist
- + Playlist: Added %Up(), %Low(), %Caps(), %Replace() and %Char() macroses
- + Playlist: Categories - Added optional separating template
- + Playlist: Categories - Added ability to expand / collapse them
- + Playlist: Categories - Added information about size and duration
- + Playlist: Categories now couldn't be separated into few parts

- + Queue Manager: Added track duration to the table
- + Queue Manager: Added information about total duration of all tracks in the queue
- + Queue Manager: Double-click on track will focus it in the playlist

- + Radio Capture: Added ability to capture stream "as is" (only for MP3 / AAC / AAC+)
- + Radio Capture: Added ability to make CUE sheet file
- + Radio Capture: Extended file split options - by time / by size

- + CoverArt Downloader: Cache previous search results
- + CoverArt Downloader: Cover search now doesn't begin immediately after window shown

- + LastFM Scrobbler: Now works directly with the service
- + LastFM Scrobbler: Scrobbling track from internet radio

- + InfoBar: Added ability to adjust background transparency
- + InfoBar: Added ability to display track cover art

- + Internet Radiostation Catalog: Added tab "Favourite"
- + Internet Radiostation Catalog: Integrated to audio library

- + Scheduler: Added smooth volume increasing

- + Icon Library: Added ability to set icon for each format

- + Tag Editor: Renaming one file - now highlight only file name
- + Tag Editor: Renaming by template: added confirmation dialog if file names match
- + Tag Editor: Renaming by template - added ability to work with copy of the file
- + Tag Editor: Added columns: Bitrate / Duration / ID3v1 / ID3v2 / APE / WMA / Vorbis
- + Tag Editor: Field "Track Number / Track Count" was divided into two fields
- + Tag Editor: ReplayGain - added ability to enter values manually
- + Tag Editor: ReplayGain - added ability to autocalculate values

- + Audio Library: Implemented as independent application
- + Audio Library: Quick content filtering among columns values
- + Audio Library: Added ability to group by any columns
- + Audio Library: Added ability to sort on several columns at once
- + Audio Library: Added labels support
- + Audio Library: Added report generation - total duration, favourite artist / album / genre
- + Audio Library: Added ability to filter files by size or/and duration before adding to database
- + Audio Library: Disk number now used for grouping by albums
- + Audio Library: ID3v2.4 separators support
- + Audio Library: Added ability to hide grouping window

- * Player: Main window now isn't frozen on file moving to removable device

- * Playlist: "Send to..." - Now you can rename by template options
- * Playlist: "Send to..." - Added ability to copy additional files with main files
