# USBASPI V2.20 MS-DOS Driver

**Better Decisions Faster**  
Manufacturing-focused insights from Frost & Sullivan Best Practices Pick: Get a demo.

Operating System: MS-DOS

Panasonic USBASPI V2.20

This MS-DOS driver makes it possible to access your USB device under MS-DOS.

Supports USB (OHCI/UHCI) and High Speed USB (EHCI) external Mass Storage devices such as hard disk drives, digital cameras, MP3 players, etc.

All major chipsets are supported (Intel/Sis/Via/nVidia)

Important notes: Hotplug is not supported. Attach your device BEFORE you power on the computer.

The following line is needed in your config.sys:

```
device=X:\USBASPI.SYS /w /v
```

Where X:\ — full path to the driver.

Now [MHDD](#) can access your USB storage as SCSI device in ASPI mode.
