SUBMITTED BY ARCHETWIST ON 06.12.2007, 17:50

OperaTor is a portable software bundle which allows you to browse the web anonymously. It combines the power of the [Opera Browser](#), [Tor](#) and [Polipo](#).

With OperaTor no data will be stored at the computer you plugged your portable memory into.

Changes in the current release

- [Opera 10.10](#)
- Tor 0.2.1.21

Subscribe to updates via the [OperaTor RSS feed](#).

Download OperaTor 3.5

[Free Internet Explorer® 8](#)

Download the New, Optimized Version of Internet Explorer® for Free Now!

[Proxy & Firewall Analysis](#)

Log Analysis & Reporting Software for Firewalls, VPN & Proxy Servers.
www.FWAnalyzer.com

Ads by Google

- [download from PBwiki](#)
- [download from My Opera](#)

OperaTor weights 10 MB and is Windows only. After the download is finished:

- **check** its MD5 checksum: 7a288e64811219b0ccc081398632288f *OperaTor-3.5.zip
- **extract** the archive to the location of your choice
- **launch** the OperaTor.exe file to start all the necessary applications

Please do **not** link directly to the files. Link to this page instead.

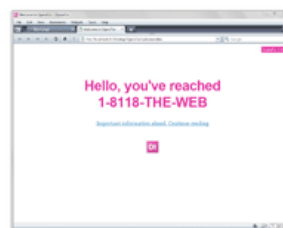

Important

The only protocols which OperaTor anonymizes are **HTTP** and **HTTPS**, thus if you want to stay anonymous you should avoid using other Opera features (e.g. Java, JavaScript, Bittorrent, integrated e-mail and IRC clients).

OperaTor comes with absolutely no warranty. It is the user's responsibility to test whether the connection is secure. Users should keep in mind that OperaTor relies on Tor (The Onion Router) and Polipo and any security questions should be directed to their developers.

Troubleshooting and bugs

If you seek support or want to report a bug, please [use the "Troubleshooting" forum](#). You will find a list of [frequently asked](#)

OperaTor

[questions](#) there, too. **Do not post your bug reports on the current page** as they will be removed.

Reviews

"OperaTor is my clear first choice."

[Gizmo's Tech Support Alert](#)

"For road warriors - and the truly paranoid - Operator is well worth a test drive."

[Download Squad](#)

"Softpedia guarantees that OperaTor is 100% CLEAN, which means it does not contain any form of malware, including but not limited to: spyware, viruses, trojans and backdoors."

[Softpedia](#)

"Keep your Web surfing private with this portable, anonymous browser."

[PC World](#)

"OperaTor has been awarded the 'Freeware-Tipp 02/2007' by netzwelt.de."

[How do I read the answers to comments?](#)

I have been reading some of the comments and found that I would like to read the answers to a few of them but, I don't know where to goto read them. Any help would be nice.

[AutoUpdate](#)

As you probably know, Opera 10 now has Auto Update. In About:Config there is a configurable field to set the update server it uses.. Maybe it'd be a nice addition to make OperaTor update itself? Without having to always come here for it :P

[Will there be upgrade?](#)

I'd like to ask, if there is any progress in this project. There is already

new TOR version → **Tor 0.2.1.19**

new Opera → **9.64 or 10** (I still prefer 9.64)

and I'd like to ask, if there could be used **Opera Portable** instead of ordinary Opera. Portable has some changes like Flash blocker and Graphics blocker which I find very good.

Also is there a possibility to implement **I2P** here?

Thanks in advance for answer.

[Which download link should I use ?](#)

It appears there are two downloads...

OperaTor 3.3 – PBwiki (<http://operator.pbwiki.com/...aTor-3.3.zip>)

OperaTor 3.3 – My Opera (<http://files.myopera.com/...aTor-3.3.zip>)

What are the differences, advantages and disadvantages, of the two downloads ? How do I know which one I should use ? Is it the same file at different download locations ? No info seems to be given unless I overlooked it somehow.

Any feedback would be appreciated.

Thanks John

Which download should I use

OK, I see where it was posted that they are both the same file. They should just put the word Mirror next to one of the downloads.

Thanks John

OPERA SECURITY HOLE?

What about the security hole in Opera? Run OperaTOR and look at: <http://3639556963> That should take you to the proxy country – it takes you straight home!!
