# Download Chandler Desktop 1.0.3

[Windows](#) | [Linux](#) | Mac OS X: [Intel \(Leopard\)](#) | [PPC \(Leopard\)](#) | **Mac OS X Tiger:** [PPC \(Tiger\)](#) | [Intel \(Tiger\)](#)

---

**NOTE** This software is subject to the U.S. Export Administration Regulations and other U.S. law, and may not be exported or re-exported to certain countries (currently Cuba, Iran, Libya, North Korea, Sudan and Syria) or to persons or entities prohibited from receiving U.S. exports (including Denied Parties, Specially Designated Nationals, and entities on the Bureau of Industry and Security Entity List or involved with missile technology or nuclear, chemical or biological weapons).

## Compatibility Notes

**Mac OS X** Chandler has been tested on Tiger (10.4) and Leopard (10.5) and are available for both PPC and Intel Macs. If you are unsure which kind of Mac you have, go to the Apple>>About This Mac menu on your Desktop and look for the name of your Processor.

**Windows** Chandler has only been tested on XP. However, Chandler will install on both Windows 2000 and Vista.

### Linux

- The tar.gz download of Chandler is built on a Ubuntu (v6.06 LTS, aka Dapper) machine. It will run on a number of other mostly-modern Linux distributions but not all.
- The .deb download is built on Ubuntu v7.10 LTS (Gutsy) and has only been verified to work on that release. (See the [the Debian Build Notes](#) for a guide on how to get it to work on Ubuntu 8.04 (Hardy))

---

## Integration with iCal

With Leopard, you can [subscribe to Chandler Hub calendars in Apple iCal 3](#), with read/write access -- from one or more computers!

---

## At-Your-Own-Risk Downloads

Latest Checkpoint Build: [Windows](#) | [Mac OS X \(PPC and Intel\)](#) | [Linux](#)

Checkpoint builds are created from the current source tree on the date referenced in the download filename.

Continuously updated, basically untested: [Windows](#) | [Mac OS X \(PPC\)](#) | [Mac OS X \(Intel\)](#) | [Linux](#)

Continuously updated builds are created by the build/release Tinderbox servers and reflect changes that are very recent. As such they should be considered useful only to those who are testing the most recent of changes.

---

## Source Code Download

For developers, debug builds and instructions on how to get the source code are available on [ChandlerDesktopSource](#)

---

## Older Releases

If you need to get an older release (for example if some bug in the latest release is preventing you from using it), see [Chandler releases archive](#).
