Have you ever considered what makes an anti-malware application effective? We at Malwarebytes have created an easy-to-use, simple, and effective anti-malware application.

Whether you know it or not your computer is always at risk of becoming infected with viruses, worms, trojans, rootkits, dialers, spyware, and malware that are constantly evolving and becoming harder to detect and remove. Only the most sophisticated anti-malware techniques can detect and remove these malicious programs from your computer.

Malwarebytes' Anti-Malware is considered to be the next step in the detection and removal of malware. We compiled a number of new technologies that are designed to quickly detect, destroy, and prevent malware. Malwarebytes' Anti-Malware can detect and remove malware that even the most well-known Anti-Virus and Anti-Malware applications on the market today cannot.

Malwarebytes' Anti-Malware monitors every process and stops malicious processes before they even start. The Realtime Protection Module uses our advanced heuristic scanning technology which monitors your system to keep it safe and secure. In addition, we have implemented a threats center which will allow you to keep up to date with the latest malware threats.

#### Key Features

- Support for Windows 2000, XP, Vista, and 7 (32-bit and 64-bit).
- Light speed quick scanning.
- Ability to perform full scans for all drives.
- Malwarebytes' Anti-Malware Protection Module. (requires registration)
- Database updates released at least once every two days.
- Quarantine to hold threats and restore them at your convenience.
- Ignore list for both the scanner and Protection Module.
- Settings to enhance your Malwarebytes' Anti-Malware performance.
- A small list of extra utilities to help remove malware manually.
- Multi-lingual support.
- Works together with other anti-malware utilities.
- Command line support for quick scanning.
- Context menu integration to scan files on demand.

#### New in this version:

1. Added new scheduling engine for our customers featuring realtime updating, more finely-grained scheduled scanning/updating, and a streamlined interface.
2. Added new flash scanning option which searches for malicious objects in memory and load point locations.
3. Added compatibility with Remote Desktop Protocol (RDP) for our corporate customers.
4. Added a brand new advanced heuristics detection module named Shuriken that will be integrated into both scanner and protection module.
5. Integrated website blocking options and other customizable policies into the main program interface.
6. Heavily improved command line interface allowing customers to scan and remove automatically and silently.
7. Heavily improved updating module which should solve various updating issues. Also added full proxy support including authentication and integration into the GUI.
8. Fixed a large number of various issues and enhanced overall stability of the scanner and protection module.
